9. The public announcement.—A messenger is then sent to a Taoist priest to inform him of the date of the deceased's first attack of illness, the time of his death, and the number of his years. The priest writes a large sheet of yellow paper mentioning these particulars, and the date on which the spirit may be expected to return, together with the classes of persons, born under certain auspices, whose presence at the coffin is contra-indicated. On obtaining this information, which is sometimes pasted up diagonally on the wall of the house, the family is able to prepare for the return of the departed spirit and his attendant.

A large sheet is hung to screen the body from the observation of people passing the door, and a rude lamp, consisting of a bowl of oil with a wick in it, contained in a basket of lime, is kept constantly alight, day and night, so that the deceased may have 'a lamp to his feet' wherever he journeys.

10. Ceremonies connected with death in old age.—If the deceased happens to be aged, say seventy years old or more, the curtain at the foot of the bed is red in colour, to show that death, in his case, should not be considered an occasion of sorrow; and no word of consolation is spoken or sign of grief shown by the visitors; on the contrary, nothing but compliments are heard that such a happy consummation has been reached, full of years and in the midst of a numerous posterity. Wine-drinking, the 'Morra,' etc., are all the rule, and any one would be laughed at who insinuated that there was any occasion for grief. It is to be noted that, until the actual coffin takes places, the candles used are of the usual red variety; white candles are not employed until all hope of revival has departed, and the body is about to be placed in the coffin. The head and feet of the corpse are

supported on specially-made pillows of yellow cotton, stuffed with paper waste, or, in country districts where cotton is manufactured, a reel on which cotton is wound is used instead.

11. **Notifying the relatives.**—A swift messenger is dispatched to inform the relatives, who are expected to send gifts to the bereaved family. The presents consist of small quilts, about three feet long and a little more than a foot wide, which are carefully marked and reserved for placing in the coffin in due course; they are thus marked to ensure that those furnished by important members of the family shall have a first place.

12. **Visits to the house of mourning.**—Notice of the arrival of visitors is given by the gateman, who beats three times on a drum; a trumpet is sounded and a hand-cannon discharged. The musicians then strike up, and the mourners are warned of the approach. The chief mourner kneels at the side of the spirit table; the stewards escort the visitor to the curtain, where he kneels four times and bows four times.

13. **Coffins.**—The style of the coffin varies throughout the empire. In some places it represents the trunk of a tree; in the north the lid projects considerably over the head. The quality is determined by the circumstances of the family. Wealthy people prefer to buy their own coffins beforehand and keep them stored either in an out-house or in a temple. Some buy the planks, keep them till seasoned, and then employ carpenters to make the coffin when required; whilst others buy theirs from a coffin-shop or from one of the Charitable Societies. At the end of the coffin a lotus flower is carved, expressing the hope that the deceased may become a Buddha and take his stand on a lotus, as Buddha is represented doing.

14. **The process of coffining.**—The time for coffining in some places is at full tide, and preferably after dinner, so that the deceased may not be put hungry to his 'narrow bed'; but in others it must be before daylight in the morning, or in the dark of evening, or on a day bearing an odd number, 3, 5, 7, etc., for fear of another death taking place if an even day should be selected. The floor of the coffin is covered with a layer of fine sifted lime or charcoal; then five large squares of coarse paper; upon these a narrow strip of matting, sometimes manufactured of special material like lamp-wick, is placed, and upon the top of all a cotton mattress. The garments for the dead are specially made for the occasion, if the family can afford it, and are fashioned after the pattern of the old Chinese costume, like that of the present Koreans; no buttons or knots are permitted—the Chinese word for 'knot' being pronounced like that meaning 'difficulty' or 'trouble,' and all such difficulties must be prevented from accompanying the traveller. The son now divests himself of the clothes he has assumed, taking them all off in one movement, without separating the several garments; and they are suspended over the backs of two chairs and perfumed or aired, by means of a brazier, containing fragrant herbs, placed underneath. Furs and leather of any kind whatever are carefully excluded, lest the dead should be turned into an animal in his next re-incarnation. The clothes are laid out on the inverted lid of the coffin, and the dead man is carefully placed in position for convenience of dressing; his arms are drawn through the sleeves; a long cord, which runs through the sleeves, is then fastened in a 'lucky' knot, and the clothes are carefully smoothed into position. The hands are placed crosswise over the lower part of the body, the left hand uppermost in the case of males, and the right in the case of females. A pair of cheap shoes are placed on his feet, and an official hat with a red tassel is put on his head. In upper-

class families a winding sheet of deep red is used, sometimes of satin and elaborately embroidered, forming a sort of large bag like a sleeping-bag, in which all but the head is enclosed, and it is fastened at one side with tapes. A satchel containing paper money, a piece of silver, and the Taoist placard is put on his shoulder; and a piece of silver is placed under his tongue. A small pearl, called 'tranquillizing the heart pearl,' is placed on his breast; and, in the case of a woman, a small pearl is inserted in the toe of each shoe.

The corpse is now lifted and placed carefully in the coffin, the son supporting the head and the daughter-in-law the feet, with others assisting at the sides. It is important that it should rest exactly in the centre. Small bags of lime are then inserted to keep the head and feet in position; the pipe, fan, and handkerchief of the deceased are also inserted, and five small bags of different colours, containing nail-parings, old teeth which have fallen out from time to time, tea, and rice; a small casket containing a rosary, and the undress cap and 'riding-jacket' are also added; for the garments which the dead is at present wearing are his ceremonial clothes, required for his audience with the gods; these others he will wear on his journey. Then each person present takes from his breast a small piece of cotton wool, called 'warm the heart cotton,' and, rolling it up into a small ball, throws it into the coffin; the relatives are invited to take a last look, and care must be taken that no tears are allowed to drop in, lest the corpse should be found in another existence with marks or stripes on his face. Then the various coverlets are laid on in regular order, those presented by near relatives being given first place, and so on in order of precedence, until the coffin is quite full; whatever quilts are unable to find a place inside the coffin are burned. Before the lid is put on, all who are regarded as representing astral influences inimical to the deceased are requested to withdraw, and are allowed to return only when the lid has been put in place. The lid is smeared with crude varnish, to make it air-tight, or sometimes a cement made of rice, vinegar, and flour is used. Usually four large nails are employed to fasten the lid; but sometimes a sort of double wedge, fitting into a socket in the lid above and another in the side of the coffin, is used instead. The nails are driven in by a senior, the sons and, in some cases, the daughters meanwhile crouching under the trestles on which the coffin rests, lest the eyes of the departed should start out at the hammering.

15. **Preparation for removal.**—When the lid is fixed in position, the mourners are allowed to plait their queues with hemp-cord, and wear coarse shoes instead of the straw sandals they have been wearing, and they are permitted to eat. Food is now placed at the side of the coffin, and the dead and his gaoler are invited to partake; the friends and relatives kneel to pay their last respects, and the chief mourner returns the compliment on behalf of the departed. Two piles of paper money are then burned, one for the dead and the other for his guardian.

16. **Meals served before the coffin.**—The 'filial curtain,' made of white cotton, is next hung up before the coffin, drawn partially back at both sides, with a table and chair placed at the opening; a white cover like an altar-cloth draping the table. Regular meals are served to the deceased on this table every day, and, each time a meal is served, the server is expected to wail and cry. This continues until the funeral.

17. **The fairy guides.**—On each side of the chair are placed tall paper structures representing hills, one called the 'golden,' and one the 'silver' hill, intended to indicate the vast sums which the fond

relatives have provided for the voyager, and behind these are tall figures of the 'Golden Youth' and the 'Jade Maiden,' bearing streamers to guide him across the 'Fairy Bridge.' The portrait of the deceased is hung up, behind the chair, supported on each side by scrolls bearing doleful inscriptions, and with white candles placed in front. The chair is occupied by the ancestral tablet, mounted on an inverted tub, and crowned by a piece of red silk fastened with red cord. The wording of the tablet reads: 'Ch'ing (dynasty) of the Rank of such-and-such, Master so-and-so's Spirit Chief.'

18. Untying the knots.—The day before the funeral, Bonzes and Taoists are invited to conduct 'masses,' called 'the Water Mass,' the object of which is to cleanse the departed of all sins and transgressions committed during his life. In the afternoon a bowl containing rice, and a thread rope consisting of seven strands, on which are threaded and tied twenty-four copper coins, is presented to a Bonze, who places it on a table in front of the table already referred to, and, as he recites the virtues of Buddha in releasing souls from pain and trouble, unties the knots in succession, putting the coins one by one into his vest. This untying of knots is meant to illustrate the release from all tightness and difficulties in the next world.

19. The journey through the 'shades.'—A Taoist takes his stand at the corner of the table, holding a bell in his hands, and, as he rings it, he chants a sort of sermon whose text is 'All is vanity,' and whose language has a remarkable similarity to the twelfth chapter of Ecclesiastes. He then describes the different stages of the journey to Hades. The journey is divided into seven periods of seven days, or 'weeks,' which correspond with the various stages of the spirit's wandering in the infernal regions. These stages are described in detail, with a wealth of impromptu illustration and elaboration; and the moral of all is the importance of repentance for not having spent one's days in vegetarianism and the repetition of Buddha's all-potent name, in order to avoid such horrors as have been related. When this long discourse is finished, a space is cleared in front of the 'spirit table,' and a large square with ornamental borders is mapped out on the floor with chaff; twelve oil lamps, provided by the Taoist priests, are disposed round the sides of the square, and are supposed to illumine the darkness of the gate of Hades.

20. Funeral frivolities.—A table is placed at which a Bonze and six Taoists sit, each performing on a different instrument. In the intervals they sing ribald or humorous songs, with the intention of exciting laughter. They also sing the 'Flower Song of the 12 Moons,' describing the different flowers which bloom in the different months, and other compositions which have apparently very little funeral reference.

21. Offerings to the spirits.—After supper the ceremony known as 'Fang Yen-kow' takes place. The spirit table and chair are removed; another chair is substituted, on which a priest takes his seat. Two tables, supporting two large candles and twenty-four bowls of vegetable food, are placed at a little distance in front, intended for the delectation of the various gods. Four other tables are disposed at the sides of the hall, two on each side, intended for the sacrifice to the family ancestors; a small table a little lower down contains the offerings intended for the dead person; and the spirit tablet sits at this table in the chair as before, attended on each side by relatives in light mourning garments. When the priests have finished their reciting, a quantity of paper garments and money is burned outside the house.

22. Sacrifice to the dead.—The apartment is now re-arranged, and preparations for the sacrifice

to the dead are made; musicians are requisitioned; large quantities of flesh and fowls are laid out; lamps are hung all over the room, and the chief mourner appears from behind the curtain, leaning upon the 'filial staff,' and supported by attendants. He kneels before the tablet and makes humble offering of the meats, etc. As he prostrates himself, a person standing at the side reads a long panegyric on the dead in a melancholy voice, and the chief mourner weeps as he lies upon his face. He is then escorted to the rear of the screen, and repeats the process three times; all the relatives and friends present follow him in his genuflexions. When all is finished, the offerings and all the temporary fittings are removed, and preparations are made for the funeral.

23. The funeral procession.—In some places the funeral takes place in the fifth watch, *i.e.* between 4 and 5 in the morning, perhaps in the fifth week, or as late as one hundred days after death, sometimes even later, and in cases of poverty the coffin is left in the house, or put in a mortuary chamber for the time being.

Every one is awake and stirring at daylight when the day arrives, and arrangements are made for the start. An immense paper figure, representing the 'Clear-the-way god,' leads the van; next come two large bamboos bearing streamers, and four 'wagheads'—paper figures of men, whose heads bob continually as they are carried along. The son-in-law or nephew carries a dish containing rice, in which is placed the ancestral tablet. In wealthy families the tablet is placed in a sedan-chair, which is supported on each side by a son-in-law or nephew. The bearer of the tablet is robed entirely in white, and the friends of the family walk on either side of him. Then follows the coffin, borne by four men or a larger number, according to the rank of the deceased, and covered with a red pall or with a satin embroidered cover. After the coffin comes the chief mourner, wearing a head-dress of coarse hemp gauze, shaped somewhat like a biretta, with 'pom-poms' of cotton-wool placed at the intersections of the frame, and worn over a small white cap. He hangs his head as he walks, and is followed by the relatives, male and female. The daughter-in-law wears a cowl or hood of coarse gauze over her head, and a jacket and skirt of the same material; she also carries a staff or wand like that borne by the chief mourner; she sometimes sits in a sedan-chair, and the heavy head-dress is then placed on the top of the chair instead of on her head. She weeps and cries aloud as she goes, like the 'keener' at an Irish wake. Rice is thrown over the coffin and chief mourners as soon as they move towards the outside door. The figure of a crane, with outstretched wing and uplifted foot, is placed upon the centre of the coffin, and is supposed to convey the soul to the 'Western Heaven.'

24. The entombment.—When the place of burial is reached, the coffin is temporarily supported by a couple of blocks, whilst the exact location is being considered, with special reference to orientation. In wealthy families, a stone receptacle is prepared beforehand, and the coffin laid very carefully in the exact centre. A meal is laid out, to which the deceased and also the denizens of the neighbouring tombs are invited. The mourners' head-dresses and cinctures are burnt, with a quantity of paper money, and the streamers and staves are left at the grave. All present now set up a cry; the stone door of the tomb is placed in position, and the tomb sealed. The head-stone is set up, bearing the names of the deceased, with the date of erection. The mourners then join hands and perform a sort of 'merry-go-round' about the tomb, which is repeated three days later.

25. Return of the ancestral tablet.—The procession returns in the same order as before, escorting the ancestral tablet to the home, with crying and burnings. On arrival at the house a great bonfire is made outside the door, and all who have attended the funeral are expected to step across it before gaining the threshold; no one is exempted. In some places a little water is sprinkled over each person by the Taoist priests. The son, in (lighter) mourning garments of blue, kneels and offers the viands prepared, and burns a quantity of paper money. He next climbs by a ladder to the ancestral shrine over the central partition, lights candles before each shrine, and then carries up the new tablet and places it in position. All present are invited to partake of the feast which follows. On the third day a visit is paid to the tomb, and offerings of food, etc., are presented. Those who are present join hands, forming a ring round the grave, and circle round in one direction three times and then reverse three times; this is with the idea of confining the spirit in his proper habitat.

26. The seven 'weeks.'—On the seventh day a number of Taoists are hired, seven in all, to 'open the road,' and a great variety of ceremonies take place on this day—morning, afternoon, and evening. In the evening the hall is again arranged, with a table and chair, and a portrait of the deceased hanging behind the chair. Two cups of tea are put on the table, and two bowls of light food, together with candles and incense. The laughter-in-law weeps before the picture, as she 'invites' the spirit to partake of refreshment, and a quantity of paper money is also burned. At daylight, tea, etc., is laid as before. At breakfast-time, food of different kinds is offered and candles are lighted. The performance is repeated at noon, with this difference, that the viands are more elaborate. This takes place every 'week' until the seventh, the only exception being that in the fifth week a further meal is laid in the death chamber. In the fifth 'week,' Taoists are called to 'force the city,' or 'force the gate of hell.' A paper city with men, horses, etc., is set up, and, when night comes, a Taoist priest in full robes breaks through the city with the sword he carries, and liberates the imprisoned soul; afterwards a great bonfire is made in the open air, and three or four priests take their stand around it, holding long bamboos, to which are attached elaborate 'fireworks.' In the sixth 'week' the daughters are expected to provide a feast for the dead, and they are given a share in the division of the clothing which he has left. At the end of the seventh 'week' the chief mourner is allowed to shave his hair for the first time, but, if the coffin has not yet been removed, he is not permitted to do so until one hundred days have expired. The next year the mourners, wearing white garments, pay their first annual visit to the grave on the day known as 'clear bright,' and on this day the sounds of wailing may be heard in all directions. A further visit is sometimes paid in the ninth moon; and at the winter solstice paper garments, representing warm winter clothes, are presented and burnt.

27. The spirit's homecoming.—On the night appointed for the return of the spirit, a table of eatables is laid in the death chamber, which is then evacuated by the relatives. In the kitchen a quantity of lime is placed beneath and around the fireplace. When the hour arrives, as announced by the Taoist priest, a procession is formed, the priest leading, and all enter the chamber. The kitchen is then visited and the lime examined, the traces of the spirit's presence being discovered by the marks, as of the feet of a goose, upon it. A white cock is caught and carried in one hand in

front of a basket-lid, and, as the lid is struck by a measure held in the other hand, the cock crows; he is then escorted outside, and paper money burnt. This represents the sending off the spirit's escort. A white cock is said to be a protection against baneful astral influences, and to be the only capable guide of transient spirits.

DEATH AND DISPOSAL OF THE DEAD (Coptic).—When the decaying religion of ancient Egypt gradually gave place before the advance of Christianity, many of the beliefs, and much of the symbolism that had been so dear to the Egyptians for over three thousand years, survived the change of religion for some considerable time, and, as was to be expected from a people by whom burial rites had been magnified into a great and complicated magical system, the old customs were given up only gradually and reluctantly. To the Egyptians, Christianity presented itself in a somewhat different light from that in which it appeared to the other civilizations of the ancient world. From the dawn of history they had believed in a continuation of life after death, in a future existence that was well defined; and in order to secure this existence for the soul of man they had elaborated countless magical rites which were performed at the burial of the dead. They had also a god of the dead—a god who had once lived an earthly life, who had been slain by the power of Evil, and who by certain magical ceremonies had come to life again, and ruled as King of the under world. It was thus that in Osiris lay their hope of living again, and with him they considered the dead identified. The Christian belief in a resurrection was therefore not, in certain aspects, a new one to them, and the doctrine that the dead in Christ shall live in Christ was strangely familiar to all who had been reared in the Osirian creed. Thus it is not strange that, when Christianity began to be accepted in Egypt, the early believers continued to practise the ancient funeral rites, only slightly modified to meet the requirements of the new religion.

The chief concern of the pagan Egyptians had been the preservation of the bodies of the dead by embalming, so that the spirit of the deceased might pass to and fro between the kingdom of Osiris and the earthly shell which lay in the tomb; and the early Christians of Egypt saw no reason to alter the custom of their forefathers, more especially since the Christian and pagan doctrines of the resurrection had so much in common. Mummification of the dead, therefore, continued to be practised by the Christians until the beginning of the 5th cent., and only died out after that owing to the general opposition of the Church.¹ Mummies of anchorites and holy men and women have been found in various parts of Egypt, one of the most notable cemeteries containing Christian dead being the recently excavated burying-ground at Antinoë. The bodies are usually well preserved, the head being sometimes adorned with a garland. In the case of the men, the beard was allowed to grow, contrary to the ancient usage, and when the face is thin or emaciated it represents very much the type of the Good Shepherd as depicted in later iconography, but unlike the criophoric figures in the catacombs.² The body was carefully wrapped in bandages, usually intercrossed, and sometimes

¹ Anthony, the founder of Christian asceticism, had so great a dislike to it that he desired to be buried secretly, in order that his body might not be subjected to the general custom. It was probably his opposition that led to the suppression of the practice.

² Gayet, *AMG* xxx.

the face was covered with a painted plaster mask, as was the pagan custom of the time. In the case of a supposed Christian priest found at Deir el-Bahari, the outer wrapping was painted to represent the deceased holding the Eucharistic cup in his hand. On his left shoulder was the *swastika* ornament, which was much adopted in early Christian symbolism, while the lower part of his robe bore a representation of the boat of Isis.¹

But it was not only the belief in the efficacy of embalming that survived the change brought about by Christianity, for many of the other old funeral customs lingered on, although it is difficult to decide how far their import was understood by the Christians. There is some evidence to show that offerings of food continued to be made to the dead. In the Christian cemetery in the oasis of el-Khargeh the tombs follow the ancient design, the body being laid at the end of a long shaft, at the opening of which is a chamber containing niches for offerings.² Wine-jars and baskets for food were sometimes buried with the dead, and in a will made by a Christian at Antinoë the deceased requests that the holy offerings may be made for the repose of his soul. This, however, may refer to an *agape*, or a kind of mass said for the dead.³ It is interesting that at the Synod held at Hippo in A.D. 393, at which Augustine was present, the habit of placing the host in the mouth of the dead, which had become general amongst Oriental Christians, was strongly condemned. It was apparently also the custom to enclose some of the holy elements in the coffin. Some other pagan usages seem to have continued. As the dead were formerly buried with amulets and little figures of protecting gods, so the pious Christian was buried with figures of St. George and the Evangelists. In one case, at least, at Antinoë a sort of ivory praying-machine, a kind of primitive rosary, appears to take the place of the papyrus inscribed with prayers and magical formulæ. There was also found, held in the hands of this body, a flower of Jericho similar to the mystic rose which was supposed to be the emblem of immortality, and to flourish every year on the day Christ was born. Hitherto this symbol was not considered to have been employed before the Crusades, but its presence in the cemetery of Antinoë points to its use in very early times. It is interesting also to note that the body of a monk named Serapion, from the same burial, was encircled by an iron band from which hung a cross.⁴ In cases where portraits of the deceased were painted on the outer coverings of the body, the ancient sign for life, the *ankh*, ⲁ , is sometimes represented grasped in the hand.⁵ This symbol is very frequent in Egyptian iconography, and was often employed where the cross would have been expected. Its use was so persistent that it afterwards became identified with the cross, and was known as the *cruz ansata*. See art. CROSS.

As the influence of the Bishop of Alexandria increased over the remoter parts of Egypt, many customs which appeared semi-pagan died out, and the funeral rites were performed more in accordance with orthodoxy. After the Council of Chalcedon (A.D. 451), when the Coptic Church was definitely separated from the orthodox body, there could be but few remaining. From descriptions in the Coptic writings, it would appear that the dead, wrapped in a winding sheet, were immediately carried out into the desert and buried. Persons of peculiar sanctity it was the custom to bury in a reliquary. The Coptic *Life of Shoute* states that he was buried in a reliquary pierced with holes, probably in order that pilgrims

might have the benefit of gazing on the holy remains.¹ As these relics are usually described as bones, it is evident that embalming had by then been abandoned. A Mass, or offering of the Eucharist, was sometimes performed before the funeral, but Masses for the repose of the dead in the Roman sense seem to have been unknown in the Coptic Church. The use of tombstones at this period was almost universal. They usually contain the words: 'One God who helpeth,' and the date on which the deceased 'fell asleep' or 'entered into rest.' Occasionally they contain pious ejaculations and quotations from Scripture. Rarely they are conceived in a more pagan spirit, with such phrases as 'Grieve not, no one is immortal,' an especially good instance of this being a tombstone in the British Museum [no. 400] which runs: 'O how dreadful is this separation! O departure to the strange land which removes one for all time! O condition of Hades, how do we come to thy gate! O Death, name bitter in the mouth! . . . Let all who love to weep for their dead come to this place and mourn greatly.'² This recalls the ancient Egyptian funeral prayer to the passer-by: 'O ye who love life and hate death . . . pray for the deceased.'

The Copts have undergone centuries of oppression under Muslim rule, which has driven many to embrace Islam. The Khalif al-Mutawakkil (850) even went so far as to interfere with their burial customs, and ordered that all the graves of the Copts should be level with the ground. Possibly owing to the influence of Islam, which has surrounded them on all sides for so long a period, the funeral rites of the Copts to-day have become very similar to those of their Muhammadan fellow-countrymen. The corpse is borne to the cemetery on a bier, followed by the female relatives and women of the house wailing and mourning. At the burial-ground a sheep is often killed by the more well-to-do, and its flesh given to the poor; the poorer give bread alone. Professional mourning women are hired to wail in the house for three days after death—a survival, perhaps, of the ancient Egyptian custom, or possibly only a ceremony borrowed from the Muslims. The lamentations are renewed on the seventh and fourteenth days after death, and sometimes for longer still. On the eve of the festivals of *al-Milad*, *al-Ghitas*, and *al-Kiyamah* (i.e. the Nativity, the Baptism of Christ, and Easter), it is the custom of the Copts to visit the cemeteries and spend the night there, many of the richer having houses built specially for these occasions. The women spend the night in the upper rooms, the men below. Next day an ox or sheep is killed, and the flesh distributed among the poor. Lane (*Modern Egyptians*, p. 296) states that the Copts say that these visits to the tombs are merely for the sake of religious reflexion. This custom, however, together with the practice of slaughtering animals for food, possibly goes back to pre-Christian times in Egypt, when the relatives of the dead made periodical visits to the tombs, and brought food-offerings for the *ka* of the deceased to refresh him in the under world. The funeral services of the Copts are according to the liturgy of St. Mark. One is in use for ordinary periods of the year, and a special one is employed during Easter (Tuki, *Rit. Copt. Arab.* p. 525).

DEATH AND DISPOSAL OF THE DEAD (Early Christian).—1. During the earlier years the Christians followed in general the burial customs of the Jews. But a livelier hope in the resurrection robbed death and the grave of many of their terrors. This gradually modified inherited funeral rites. To the followers of Jesus death was a sleep, and the grave a resting-place (κοιμητήριον) for those who had died in the faith (Jn 11¹³, Ac 7⁶⁰, 1 Th 4¹³, 1 Co 15¹⁸⁻²⁰). Not less but more respect was accordingly paid to the mortal remains of the departed, for their bodies had been 'temples of the Holy Ghost,' and were to rise and be glorified (1 Co 3¹⁶, 6¹⁹, 15⁴², Rev 7¹³). When death ensued, the eyes were closed, the body washed, the limbs swathed, the whole body wrapped in a linen sheet with myrrh and aloes, and laid upon a couch in an upper room (Ac 9³⁷; cf. Mk 15⁴⁶ 16¹, Jn 11⁴⁴ 19³⁹, 20⁵⁸). These acts were performed by the elder women—kindred and friends of the family. Relatives and intimates were admitted to view the face of the deceased, and an interval of eight or more hours was required before burial. The younger men carried the bier to the place of interment, followed by the relatives and friends (Ac 5⁶; cf. Lk 7¹⁴). Flute-players, hired mourners, and noisy demonstrations of grief were doubtless dispensed with (Mt 9²³, Lk 8⁵², Ac 8², 1 Co 15⁵⁴). The place of burial was outside the city or village, in a natural cave, or in a tomb cut out of the rocky hill-side, or in a subterranean chamber, or simple grave. Local conditions were determinative. The description in the Gospel of John of the tomb of Lazarus and of that of Jesus will hold for the early Christian Palestinian place and form of burial (Jn 11³⁸ 19⁴¹; *Gosp. of Peter*, chs. 6 and 10). In fact, the form and character of Jesus' entombment influenced all subsequent Christian practice (1 Co 15²⁰). Tombs were, as a rule, private family possessions (Mt 27⁵⁷), and were large enough to receive several bodies, which were laid upon the ledges or in the niches cut in the sides. The brotherhood, however, from the beginning undoubtedly provided for the burial of its own poor (Ac 2⁴; Aristides, *Apolog.* [Syr.] xv. 18). A large stone, rolling in a rabbit, closed the door of the hill-side sepulchre against prowling beasts and robbers (Mk 16³). It is altogether probable that the Jewish Christians whitewashed their tombs, as did their compatriots (Mt 23²⁷). In Rome and in general throughout the West, as well as in Egypt and North Africa, the Jews had already adapted the Palestinian form of interment to local conditions, and the early Christians modified this still further to meet their own peculiar requirements. Of course they borrowed this and that local practice from the current pagan usage. The wide-spread development of 'catacombs' (*q.v.*) as places of Christian burial was but a re-adaptation of Jewish and pagan burial customs. Simplicity and even plainness must have characterized the earlier forms of Christian entombment in all lands, partly on account of the poverty of the brotherhood, and also because of the hope of a speedy resurrection. A brief inscription expressing the hope of immortality (*ελπίς σοι, κόλυμβος ἐν ἐλπίδι, in pace*, etc.), sometimes accompanied by a consecrated symbol (a palm-branch or anchor, fish or dove), was the final tribute to those who had died 'in the Lord' (Bingham, *Antiq. of Chr. Church*, ed. 1870, bk. xxiii.; *Am. Cath. Quart. Rev.*, 1891, xvi. 501 f.; Kaufmann, *Handb. d. chr. Arch.*, 1905, pp. 74 f., 111 f., 205 f., 277 f.; art. 'Köimeterien,' in *PRE* x.).

2. But changing conditions produced manifold developments. The wide-spread and increasing alienation between Jews and Christians in the early decades must often have suggested, if it did not compel, separate burial arrangements. And

the rapid increase of the Gentile element in the various churches throughout the Empire naturally tended strongly in the same direction. The Jewish cemeteries, indeed, would hardly have been open for the interment of deceased Christians with pronounced pagan antecedents. Our sources, it is true, are practically silent regarding the progress of this development, but it is safe to say that separation between Jews and Christians as regards cemeterial requirements had taken place before the close of the first century, especially in prevailingly Gentile Christian communities. And a similar separation must have been going on as between pagans and Christians. Hostility between them became marked towards the close of the 1st century (Ac 8¹², 15²⁸, 1 Co 7¹², 2 Co 6¹⁴, Col 2⁸, 1 Jn 2¹⁸, 3¹³, Rev 2^{10, 20}, 3⁹, 6¹, and chs. 8-20), and martyrdom was not uncommon (Clem. Rom. *ad Cor.* 5-7; Tac. *Ann.* xv. 44; Suetonius, *Nero*, 16; Melito *ap. Euseb. HE* iv. 26, iii. 17-20; Pliny, *Ep. ad Traj.* x. 96, 97; Ign. *Ep. ad Rom.* 5, *ad Phil.* x. 2; Polyc. *ad Phil.* 1). The Christians would naturally wish to ensure the sanctity of the graves of their martyred dead, but in order to do so they had to provide separate cemeteries. That this began to be done in Rome by the opening of the 2nd cent. is generally admitted (de Rossi, *Roma Sott.* 1864-71, i. 343 f., iii. 386 f.; *Bull.* 1865, p. 36 f., 1886, p. 136; *Nouv. Bull.* 1901, p. 71 f., 1902, p. 217 f.; Bosio, *Roma Sott.* 2 1650, p. 141 f.; Armellini, *Gli Antiche Cimit.*, 1893; V. Schultze, *Katakomben*, 1882, p. 307; Kaufmann, *l.c.* 111 f.). But that it did not come to pass throughout the Empire is abundantly proved (Ramsay, *Cities and Bishoprics of Phrygia*, 1897, i. 500 f. and 717 f.). Influences other than hostility would often operate to hasten or prevent the institution of separate Christian cemeteries. In some lands, such as Syria and Asia Minor, it took even centuries to accomplish the separation of Christians on the one hand, and Jews and pagans on the other, as regards burial accommodation (Ramsay, *l.c.*).

3. The earliest distinctly Christian cemeteries of which we have any knowledge are to be found in the neighbourhood of Rome. The Neronian persecution, followed by that of Domitian, doubtless constrained the Christian brotherhood to provide separate resting-places for their honoured heroes who had 'fallen asleep.' And, as martyrs to the faith multiplied, such cemeteries became consecrated ground, and the tombs of the martyrs were ere long places of pious meditation and devotion. In certain communities this often necessitated chapels, where the brethren could gather without imminent danger of molestation. Then funeral rites and ceremonies soon shared in the general development, and these in turn reacted powerfully upon the whole manner and mode of burial. The entire catacomb development at Rome, Naples, Syracuse, Alexandria, Trèves, and elsewhere, for example, is adequately explained only on such presuppositions. Instead of family tombs and brief temporary resting-places for the dead, the Church, especially in the West, gradually made provision for the burial of all its deceased members (by A.D. 250). There accordingly arose, in the suburbs of every considerable Occidental city, Christian burying-grounds. And, where the remains of noted martyrs were laid, chapels were erected, and the brethren gathered to observe the Holy Eucharist and to hold fellowship with the 'saints who had gone before.' The chapel was named after the martyr; often the title was given to the whole cemetery; more frequently the cemetery bore the name of the patron who had provided the ground; occasionally of the bishop who enlarged and elaborated it. Instances of each are the cemetery of the martyr Prætextatus, of the patron Priscilla, and

of the bishop Calixtus—all in the neighbourhood of Rome. In the Orient, developments were different. Palestine is rich in rock-tombs, and so is the whole of Syria. Asia Minor has few ancient church-cemeteries; it has mostly family burial-places. And this is largely true of the whole Orient. Stone sarcophagi with Christian inscriptions are frequently found. These were placed in simple graves beneath the surface, or in tombs erected on the hill-side, with more or less elaborate façades. In all this there is little that was distinctively Christian (Ramsay, *op. cit.* i. 500 f., 717 f.). But in the West the pre-Constantine developments were quite unique. Beginning with the Jewish or pagan type of family tomb, the Christian churches soon provided cemeteries for all their dead (Aristides, xv. 8, 11; Tert. *Apol.* xxxix.). The most common form of these was that which was later known as 'catacombs' (*q.v.*). These underground cemeteries are enormously extensive in the neighbourhood of Rome, and were used as burial-places by the Christians down into the 5th century. They give us the larger part of our information on the theme in hand. The transition, for example, from the private family-tomb to the common church-cemetery is illustrated by the St. Lucina crypt and the Calixtus catacomb, by the so-called *spelunca magna* and the Prætextatus catacomb, the Flavian vestibule and the Domatilla catacomb, and the 'Acilii Glabrones' chamber and the Priscilla catacomb. The growing use of obituary inscriptions can also be seen in the catacombs, from the simple *ελην η σοι* to the most elaborate personal tribute on the tomb of Sixtus II. (A.D. 258). The development of Christian symbolism can likewise be traced therein, from the rude but suggestive 'anchor' to the portrayal in fresco of the Last Supper or of the story of Jonah. Christian art in general had its beginnings and early elaborations in the catacombs, and every phase of it was closely related to the burial of the dead. This is especially true of painting, sculpture, and church architecture. The same is also true of the development of the liturgical and sacerdotal rites in the early Church, and the worship of the dead. The ante-Nicene development of burial customs is, however, quite amply reflected also in the current literature. The *Martyrium S. Polycarpi* speaks of celebrating 'the anniversary of his martyrdom,' or birthday, at his tomb (xviii.). Tertullian says: 'As often as the anniversary comes round, we make offerings for the dead (martyrs) as birthday honours' (*de Cor.* iii.; see also *de Monog.* x., and Cyprian, *Epp.* xii., xxxiii., xxxvi. 2; cf., further, art. **COMMEMORATION OF THE DEAD**).

The Christians did not fear cremation, though they preferred 'the ancient and better custom of burying in the earth' (Min. Felix, *Oct.* xxxiv.; cf. *Mart. Polyc.* xviii.; Tert. *de Anima*, li., *de Res. Car.* lxiii., *Apol.* xlii.; Origen, c. *Cels.* v. 23, viii. 30; Lactantius, *Div. Inst.* vi. 12; Euseb. *HE* v. 2, vii. 22; August. *de Civ. Dei*, i. 12, 13). Simplicity prevailed throughout the 2nd cent. (Min. Felix, *Oct.* xii. and xviii.), but by the opening of the 4th cent. everything had become elaborated. Associations had been formed in the West to hold the property; space was sold in the cemeteries; gravediggers (*fossores*=*κοιμητραι*) had become a separate class, and there were artists, stonemasons, painters, sculptors, and architects. The anniversary festival had been extended so that the third, seventh, and perhaps the thirtieth and fortieth days after burial were celebrated (*Apost. Const.* viii. 41 and 42). Prayers were made at the tomb, psalms sung, and the Eucharist celebrated as fellowshiping with the dead; lighted tapers were placed at the grave; personal ornaments,

toilet articles, bottles, vases, etc., were interred with the corpse (Synod of Elvira, can. 34.; of Laodicea, can. 9.; of Gangra, can. 20.; Euseb. *HE* vii. 16, *Vita Const.* iv. 66, 67, 70, and 71; Epiph. *Hær.* lxxv. 3; Socrat. *HE* i. 40, iii. 18; Jerome, *Ep.* xxvii. [cviii.] *ad Marcellam*).

4. With the recognition of Christianity by Constantine a new era opened. Recent martyrdoms had multiplied the number of saints and holy places, furnishing fresh sites for sacred buildings as well as holy relics for altars. Imperial favour and funds now facilitated the erection of churches throughout the Empire, and the graves of apostles, martyrs, and honoured saints were soon covered by imposing basilicas or mausoleums. In the suburbs of Rome, for example, the basilica of St. Peter arose on the Vatican Hill, that of St. Paul on the Via Ostiensis, that of St. Lawrence on the Via Tiburtina, that of St. Agnes on the Via Nomentana, and that of SS. Marcellinus and Peter on the Via Prænestina. These all were, or became, cemeterial churches, with which Imperial mausoleums were frequently connected, as in the case of the mausoleum of St. Helena, near the last-named church, and that of Constantina, near St. Agnes. All around this latter basilica were placed minor monuments in a large open-air cemetery. The 'churchyard' now soon becomes the prevailing type of cemetery throughout the West, including North Africa. Persecution having ceased, the Christians were free to bury *sub divo*, yet the martyr graves beneath the altars usually drew the cemeteries near the churches. Of course, local conditions were determinative. Churches within the walls of the cities could not have extensive cemeteries, though their crypts were used for burial purposes. Western Europe followed in general the lead of Italy and Rome as regards cemeterial churches and churchyards. North Africa seems to have early developed the open-air cemetery, independent of particular churches. Egypt continued for the most part the ancient practices of the native Egyptians and naturalized Jews. Syria also persisted in its old burial customs, though the elaborate mausoleums of antiquity were not erected as Christian tombs; and the same was true of Asia Minor.

5. The elaborate funeral ceremonies and the interment of the Emperor Constantine in Constantinople (Eusebius, *Vita Const.* iv. 60 and 66-72) indicate the stage which the development had reached and also lines of future progress:

The body 'was placed in the principal chamber of the palace, and surrounded by candles,' and 'encircled by a numerous retinue of attendants, who watched around it incessantly night and day'; the second son, Constantius, himself headed the procession, 'which was preceded by detachments of soldiers in military array, and followed by vast multitudes, the body itself being surrounded by companies of spearmen and heavy armed infantry. On the arrival of the procession at the church dedicated to the apostles of our Saviour, the coffin was there entombed. . . . As soon as Constantius had withdrawn himself with the military train, the ministers of God came forward, with the multitude and the whole congregation of the faithful, and performed the rites of Divine worship with . . . prayers for his soul. . . . His statue was erected . . . in every province.'

The funeral and entombment of Basil, Bishop of Cæsarea, as described by Gregory of Nazianzus, is likewise instructive (*Paneg. on Basil*, 80):

'The saint was being carried out, lifted high by the hands of holy men, and every one was eager to seize the hem of his garment, or to touch his shadow or the bier which bore his holy remains. . . . The psalmody was overpowered by the lamentations. . . . the body was consigned to the tomb of his fathers. . . and now he is in heaven, where, if I mistake not, he is offering sacrifices for us and praying for the people.'

Panegyrics on deceased distinguished personages, and over the remains of relatives and friends, became common (Euseb. *Vita Const.*; Ambrose on Valentinian and on Theodosius; Greg. Naz. on his brother, sister, and father [*Orat.* vii. viii. and xviii.], and on Athanasius; Greg. Nys. on Meletius;

August. *Conf.* ix. 12; Jerome, *Epp.* lxi. etc.). The anniversaries of famous martyrs were also occasions for elaborate discourses on their virtues. And their tombs now became the resort of pilgrims from far and near. The relics of martyrs and saints were frequently disinterred and sent to important churches for re-burial in the crypts, where shrines were erected and services held. The Synod of Gangra (c. 358 A.D.) declares: 'If any one shall, from a presumptuous disposition, condemn and abhor the assemblies (in honour) of martyrs, or the services performed there, and the commemoration of them, let him be anathema' (can. 20). Yet the Synod of Laodicea (before A.D. 381) announced that 'members of the Church shall not be allowed to frequent cemeteries or so-called martyries of heretics for prayer or worship' (can. ix.). Many councils in Spain, France, and Germany during the 6th cent. tried to stop burials in martyries and churches. Pelagius II. (A.D. 578) protested against the growing custom, but with slight effect. Burial around churches, or in porches, vestibules, and cloisters, soon became universal. Gregory the Great (c. 600 A.D.) complains about exactions of cemetery officials as a price of burial, but says: 'If parents or others wish to offer anything for lights, we do not forbid, but you must not ask it' (bk. ix. *Ep.* iii.). Jerome and Chrysostom had spoken approvingly of giving alms at funerals, for the relief of the souls of the dead.

6. A summary of the theme in hand may be given under the following heads. (1) The simple funeral rites and burial customs of the early days gradually gave way to more and more elaborate ceremonies and practices. (2) These developments were different in different lands, but they all tended in the same general direction. (3) Two universal influences were at work to produce these manifold changes: one arising out of the persistent faith and life of the Church, the other pressing in from the universal pagan environment. (4) Funeral rites were extended so as to include the elaborate ceremonials which have been described above, most of which were drawn more or less unconsciously from the surrounding pagan practices, although the Christians never lost the primitive faith and feeling which distinguished their early funeral customs. (5) The manner and forms of entombment were also steadily influenced by the various pagan practices, and yet to the Christians the grave remained the 'sleeping-place' for those who were to arise to 'newness of life.'

EDWIN KNOX MITCHELL.

DEATH AND DISPOSAL OF THE DEAD (Egyptian).—Of no other country in the world have the burial customs always attracted so much attention as have those of ancient Egypt. The artificial preservation of the body, the elaborate care with which it was provided with covering and ornament, the monumental nature of the tombs which were built or excavated to contain it, struck the earliest foreign observers with astonishment, and are still the theme of wonder and admiration in our own day. Moreover, the dry and microbe-free climate of Egypt, in which nothing is destroyed by the disintegrating action of the atmosphere or the attacks of bacilli, has helped the artificial aids of mummification and carefully-sealed burial to preserve the human body and its appurtenances intact just as they were placed in the tomb. Even if

removed from its wrappings, it is but rarely that a mummy is affected by any agency except damp; while the textile fabrics, the mats and baskets, and even the loaves of bread sometimes placed with it, are, if delicate and brittle and without elasticity, to all outward appearance the same now as when they were buried with the mummy. It is chiefly to their preservative methods of burial that we owe our present remarkable knowledge of the ancient Egyptians and their manners and customs, whereas in the case of Greece and Rome we have become acquainted with the course of daily life, and the objects of daily use, mainly through the medium of literary descriptions or the representations on painted vases. In Egypt we have the actual objects themselves, from the precious ornaments of gods and kings to the humblest bead-necklaces or rude idols of the *fella-hin*; we have chariots perfectly preserved, splendid furniture and marvels of cabinet-making which once adorned palaces, simple wooden benches, and the shoes, mallets, and baskets of the common peasants. The majority have been preserved in the tombs. Naturally we possess actual objects of daily use from Greece and Rome also, but they are rare, and tell us little compared with the vast corpus of knowledge which we have derived from the sepulchres of Egypt. And one thing we have from Egypt which is the most wonderful of all, and this we can never have from Greece and Rome. No man has seen the actual face and form of Themistocles, Pericles, or Cimon, of Solon, or of Socrates, of Alexander, Hannibal, or Augustus; yet every man now who wishes may gaze upon the actual bodies of kings whose ancient names were told by the priests to the Father of History, whose deeds as they were written on temple-walls were recounted to the nephew of Augustus, and whose statues were venerated as those of deities by the Emperor Hadrian. Sesostris, Ramses, and Osymandyas, who were ancient names to Hellenes and Romans, and were actually contemporaries of Greek kings who were the heroes and demi-gods of the classical period, lie now in the glass cases of the Cairo Museum. Mycerinus, of whom Herodotus (ii. 129-134) tells a merry tale, is No. 6006 of our national collection in the British Museum. Their preservation to the present day is due to the peculiar burial customs of their nation, and was intended.

The chief peculiarity of the Egyptian burial customs is the artificial preservation of the body. No doubt in later times a theory of resurrection was adopted, according to which, after a space of three thousand years, the several parts of a man—his *ikhu*, or spark of intelligence which had rejoined the gods, his *ba*, or bird-like soul which fluttered around the tomb, his *khaibit*, or shadow, and the *ka*, or double of him, which was born with him and accompanied him on earth during life and in the tomb during death—rejoined his *sahu*, or noble and venerable mummy, which had lain so long in solitary majesty in the tomb, and then the whole man rose again from the dead. But it is not clear that this actual man was to live again on earth as he had lived before. He was to live with the gods rather. According to another theory, the *sahu* was not the actual mummy, but a sort of spiritual body which germinated in the *khat*, or corruptible body, and sprang up out of it just as the wheat springs up out of the seed: so the dead Osiris gave birth to a new living Osiris. It was in this *sahu* that the concomitant parts of the man were re-united. A symbol of this belief is found in many tombs; it is a figure of Osiris on his bier, made of earth, in which seed was sown just

before the burial; as we find it now, we see the wheat which grew up and withered in the darkness. The two different ways of regarding the *sahu* probably arose from two different ideas of the actual dead body. In one aspect it was a mere dead thing, not different from a dead fish—the *khat* of a man like the *khat* of a fish—and was expressed in the hieroglyphic writing by the figure of a dead fish. But in another it was a fearful and wonderful thing—the *sahu*, dwelling in majestic loneliness and silence in the tomb, and endued with marvellous magical powers, which naturally included the power of summoning back to it at will the departed principles of life and intelligence, the shadow, the heart, and the name, ever regarded with awe by primitive races. So the *sahu* is represented as the human mummy lying on its bier. The two ideas were combined in later times by regarding the *sahu* as a spiritual body (which originally it was not) which sprang from the *khat*. The *khat* was simply the profane name for a dead body of any kind. In the oldest religion, when the actual human mummy was alluded to, it was called the *sahu*, and one prayed to the gods to allow the *ba* to re-enter the *sahu* and re-vivify it, so that it could feed upon the offerings which its descendants brought to it. It was probably out of this idea that the conception of a resurrection, whether of a spiritual *sahu* or of the actual man, grew. The real origin of mummification is to be found in a simple desire to preserve the dead man to his family. In the dry soil of Egypt bodies were found by experience not to decay utterly when they were buried in shallow graves, and the simple expedient of smoking or scorching was no doubt resorted to in order to stave off putrefaction even more. How far smoking is responsible for the crouched and drawn-up position of the oldest Egyptian bodies is doubtful. Real mummification was not known to the oldest Egyptians, but that it was introduced before the close of the Neolithic period is shown by the hieratic use, even in the very latest time, of a flint knife only, in order to make the incision through which the entrails were removed. Herodotus records for us this use of 'an Ethiopian stone' (see below). The ancient and holy stone-knife alone could be used for this act; the new-fangled metals were profane. Of this desire to preserve the dead as long as possible to 'those on earth who love life and hate death,' in the words of the Egyptian funeral-prayer, we may find a proof in the custom of keeping the mummy above ground for a specified period, in its own home, before it was finally committed to the tomb (see below, p. 462).

Wiedemann regards this custom, which we shall discuss further later on, as a survival of what he calls 'secondary' interment. In the most ancient days he considers that the primitive Egyptians buried the body first in ground near or under the house till it had partially decayed, and then transferred it to its final resting-place in the desert necropolis. In this way he explains, too, the fact of the disturbed condition of the bones in most of the Neolithic graves, which Flinders Petrie explains as due to a ceremonial cannibalism. Wiedemann thinks that the body was intentionally cut up after putrefaction had set in during the first burial in order to clean the bones before the second and final burial. He finds confirmation of this view in many texts of the 'Book of the Dead,' in which the cutting off of the limbs of the dead is referred to, while the deceased prays that his limbs may be restored to him, and that he may be whole. There is also the legend of the cutting up of the body of Osiris. That these passages are rightly interpreted as referring to a primitive custom of cutting up the body is possible. At Desbasha, Flinders Petrie found definite proof of dismemberment in some cases. But there is little proof that the reason for the practice is that advanced by Wiedemann. And, as a matter of fact, dismemberment was not so usual as has been thought, for much of the disturbance of the remains in pre-historic graves is no doubt due merely to predatory beasts and to wady-torrents (*s&ls*).

The primitive custom of burial in a crouched-up posture gradually gave place, during the early

dynastic period, to that of burial at full length, with which real mummification is associated. At Médûm, Flinders Petrie found both customs existing side by side in the graves of the age of the IIIrd-IVth Dynasty. It was probably not till the time of the Vth Dynasty, when Egyptian customs became crystallized in the form which they more or less retained ever afterwards, that the old custom of the Neolithic people finally died out and the burial customs of the Egyptians took the final shape which we know so well. At least from the time of the IIIrd Dynasty, prayers were made for the dead in the ancient form: 'May Anubis [the protector of the tomb at Abydos] or Osiris [the Busirite god of the dead] grant a royal offering: may he give thousands of flesh, fowl, and everything good and pure on which the god there liveth, to the *ka* of N., justified and venerated' (see below). And the piety of those 'on earth' erected a grave-stone 'in order to make his name to live on earth.' This was as far as the Egyptians ever went in the direction of ancestor-worship. As has been shown in the art. ANCESTOR-WORSHIP (Egyptian), the belief that the dead man was absorbed in the personality of the great god of the dead, Osiris—a belief universal throughout Egypt by the end of the 'Old Kingdom'—prevented any worship of him under his own name: he was venerated as being himself Osiris, not as an ancestor. Otherwise a developed ancestor-worship would, no doubt, soon have grown up; for family life was close and affectionate in Egypt, far more so than among the surrounding nations; and the names and figures of parents, children, and other relatives were constantly commemorated on the gravestones of the dead. 'Those living on earth who loved life and hated death' (*ankhiu tep ta mer ankh mestjetj mut*) were always full of sympathy with and affection for those who had gone down before them into the mysterious tomb-world, and to this is due the whole elaborate paraphernalia of Egyptian burial. The smoked body of the earliest period was provided with a mat on which to lie peacefully, with jars of food to live upon, and with flint weapons to use if it could. For how did one know what happened to the venerated *sahu* in his tomb? Would not *ka* and *ba* return to it, bringing back beloved life? That he who had been alive was now absolutely and irrevocably dead was as inconceivable to the childlike mind of the oldest Egyptian as it was to that of any other primitive man. And among this most conservative of all races, the primitive idea merely became more elaborate and overgrown with ritual as civilization progressed.

A better means was devised of preserving the body in order that *ka*, *ba*, and *ikhû* might come back to it and give it life and intelligence to live upon the offerings of its pious friends on earth, to go whithersoever it would, to take any form it pleased, to exercise its undoubtedly magical powers (was not death itself magic?) for good. The easily putrefying entrails and brain were removed, and the body, reduced to skin, flesh, and bone only, was salted in natron, filled with spices, and carefully bound up, in order that decay might never come to it. The removed portions were not cast aside, but were also mummified, and stored in four special jars, which we call 'canopic jars,' each under the protection of a certain demon, so that the dead man could have them at his need. And the shallow grave on the sand became for the well-to-do Egyptian a great sealed tomb in the rock, in which he could rest with his body, safe from the prowling jackal or hyæna, and with his protective amulets and funerary furniture, often made of precious materials, guarded from the impious hands of human robbers. For in Egypt,

as elsewhere, lust of gold drove men to theft; and even in Egypt, the most pious of lands, many could at all times be found who would brave the anger of gods, priests, and the outraged dead themselves to obtain riches. Many tombs were violated within a century of the burial of their owners, in spite of all the precautions taken in order to hide them. That of Thothmes IV. was already violated during the troubles of the reign of the heretic Ikhnaten, and the royal burial was 'restored' in the reign of Horemheb. The knowledge shown of the precise position of the carefully-hidden tombs makes it evident that the thieves, no doubt, came from among the ranks of the priests and guardians of the necropolises themselves; and in the reign of Ramses IX. the scandal had become so great that a royal inquisition into the robberies of tombs was held, which resulted in the conviction and punishment of many offenders. But tomb-robbery went on gaily; the prizes were worth having; and fifty years later all the royal mummies at Thebes had to be taken out of their original tombs and hidden in remote hiding-places, where they remained till discovered in our own time, and placed in the Museum of Cairo. The primitive Egyptian, however, had no fear of tomb-robbers, or of any disturbance beyond that of a storm-flood which might descend from the hills and lay his bones bare to the winds, or of the prowling jackal. This last was a very real danger, and a naive way of forestalling it was devised by regarding the magic-working beast who lived among the tombs as their protector as well as their ravager, and praying to him to take care of the resting-places of the dead and to allow the offerings of the living to remain in peace, and himself to give funerary offerings of the very best ('a kingly offering'), of thousands of flesh, fowl, and everything good and pure on which the god there (the dead man) lives, to the *ka* of the dead man. This is the origin of the well-known *di-hetepsuten Anup* formula, which we have already quoted (p. 459^b)—'May Anubis (the jackal) give a royal offering,' etc., which was inscribed on every Egyptian gravestone, till Osiris or another god took the place of Anubis, in which case, however, the formula remained the same. Another theory has explained the occurrence of the word *suten*, 'king,' in this formula as referring to an actual intervention of the earthly reigning king on behalf of the dead man. It is known that the kings often provided magnificent burials for favourite courtiers or nobles; but whether in the early period the monarch was always expected at least to make offerings vicariously at the grave of every subject is very doubtful.

The process by which Anubis lapsed into the position of a mere satellite of Osiris, whose worship as god of the dead spread from Busiris in the Delta over the whole of Egypt, has already been traced (see ANCESTOR-WORSHIP [Egyptian], B). The inscriptions and decorations of the tombs, especially those of the royal tombs at Thebes, exhibit to us a temporary degeneration of Osiris himself, at any rate at Thebes. During the Theban period Theban ideas naturally coloured the beliefs of the majority of Egyptians, and Osiris had become largely identified with Amen-Rā. The ideas of Busiris, Sakḥāra, and Abydos as to Osiris-Sekri-Khentamenti had all become blended with the Heliopolitan idea of the dead sun-god who, after his midday glory as Rā, set as Tum, and during the night sailed through the tomb-world beneath the earth in his barque, attended by the souls of the blessed; and to this was added the identification of the ram-headed Amen of Thebes with Rā. So that we find the dead Amen-Rā-Osiris, blue in colour like the dead Osiris but ram-headed like Amen and called by the mystic name

of Anf, 'his limbs,' passing, attended by Isis and Nephthys, the companions of Osiris at Busiris, through the lower world. The Theban priests developed a set of the ancient systems of spells and incantations designed to protect the dead man in the under world and describing his proceedings there (which the Egyptians called 'The Book of Coming Forth from the Day,' and we have named 'The Book of the Dead') into two 'books,' entirely separate from the ordinary 'Heliopolitan' and other recensions of the Book of the Dead. These they called 'The Book of the Gates,' and 'The Book of That-which-is-in-the-Underworld,' which are written and pictured on the walls of the royal tombs at Thebes. There is no doubt that the Egyptians pictured the *Duat*, or Underworld, as actually beneath the earth. This arose from the fact of the tomb being excavated in the earth. The houses of the dead in the necropolis, the *Kherti-neter*, or 'divine under-place,' as the Egyptians called it, formed in their ideas a subterranean world of their own, in which the *sahs* resided in awful majesty each in his tomb, while the ghosts could pass from tomb to tomb through the mazes of the under world. Later, the boat of the sun, in which the god of light crossed the heavens by day, was thought to pass through this dead world between his setting and his rising, accompanied by the souls of the righteous. In this under-Egypt, over which Osiris presided as the mortal king presided over the living Egypt above, and to which a dead sun gave illumination as the living sun gave light to living Egypt, the soul was supposed by some to live very much as the man had lived on earth: there were rivers and lakes to be navigated and fields to be tilled there, and the dead might be called upon to do work as he had worked on earth. But surely rest was the guerdon of a man who had lived a laborious life, so that with the dead were buried boxes full of little Osiris figures called *ushabtiu*, or 'answerers,' because, as the sixth chapter of the 'Book of the Dead' inscribed upon many¹ of them said, 'If one calleth Osiris at any time to do any labours which are to be done there in the under world, to plough the fields, to fill the canals with water, to carry sand from east to west, behold! say, "Here am I when ye call!"' They answered for the dead man. There is little doubt that these *ushabtiu* were the descendants of very real 'answerers' in the shape of dead slaves, who in very ancient times were strangled and buried with their lords in order to serve them in the other world as they had done in this. Growing humanity and culture substituted wooden and stone slaves for real ones; but it may be that the custom of giving real 'answerers' was continued in the case of the kings till quite a late date. It may be even that the dead bodies found lying by the wooden boat in the tomb of Amenhetep II. (1450 B.C.) were murdered slaves. In the earlier days of Mentu-hetep II. (2200 B.C.?) priestesses of Hathor who were members of his harem seem to have been killed and buried in the precincts of his tomb-temple at Deir el-Bahari in order to accompany him to the next world. And naturally enough we find the bodies of slaves in the tombs of the 1st Dynasty kings at Abydos.

Although in later times the Egyptians were certainly more humane than either the Greeks or the Assyrians, it would be a mistake to suppose that they had always been so. In earlier days they had been, like all semi-civilized races, more or less children, and a child has no idea of the sanctity of life. Certainly the Egyptians had originally no conception of the sanctity of human life as distinct from other life. The slaves followed their masters

¹ Some have merely the inscription 'Illuminate the Osiris N!'

to the tombs as the food did, or the caskets, or the jewellery.

In the tombs, if they are tombs, of the kings of the 1st Dynasty at Abydos, we find an immense *bandobast* for the journey to the next world. There were stacks of great vases of wine, corn, and other food, covered up with masses of fat to preserve the contents, and corked with a pottery stopper, which was protected by a conical clay sealing, stamped with the impress of the royal cylinder-seal. There were bins of corn, joints of oxen, pottery dishes, copper pans, and other things which might be useful for the ghostly cuisine of the tomb. There were numberless small objects, used, no doubt, by the dead monarch during life, which he would be pleased to see again in the next world—carved ivory boxes, little slabs for grinding eye-paint, golden buttons, model tools, model vases with gold tops, ivory and pottery figurines, and other *objets d'art*, the golden royal seal of judgment of king Den in its ivory casket, and so forth. There were memorials of the royal victories in peace and war, little ivory plaques with inscriptions commemorating the founding of new buildings, the institution of new religious festivals in honour of the gods, the bringing of the captives of the royal bow and spear to the palace, and the discomfiture of the peoples of the North-land. All these things, which have done so much to re-constitute for us the history of the earliest period of the Egyptian monarchy, were placed under the care of the dead slaves whose bodies were buried round the tomb-chamber of their royal master at Abydos.

Passing over a space of two thousand years, we see the burial of Inaia and Tuyu, father and mother of Queen Tii, the consort of Amenhetep III., at Thebes. Here we have the same *bandobast* for the next world: beautifully carved chairs and beds, boxes for wigs and garments, even a chariot, besides all the regular appurtenances of the dead as now prescribed by religion. But the place of the dead slaves is taken by the stone and wooden *ushabtiu*. All this funerary pomp and circumstance grew up from the simple burial of the Neolithic Egyptian with his mat, his pots, and his flints. What kind of religious services were celebrated at the grave in the earliest period we do not know, but it is certain that they contained the germs of the later ritual as it was carried out in Pharaonic times. The descriptions given by Herodotus and Diodorus of the different processes of mummification and the funeral ceremonies are well known. They were eye-witnesses of what they describe; and their descriptions, with exceptions in the case of Diodorus, tally entirely with what we know from the monuments and inscriptions. The account of Herodotus (ii. 85 ff.) is as follows:

When any person of any importance dies, all the women in the house, and the heads and faces with mud, and the house, they wander about the city, and beat themselves, with their clothes girt up and their breasts exposed; and all their relations accompany them. And on their part the men beat themselves, being girt up in like manner. After they have done this, they carry out the body to be embalmed. There are those who are appointed for this purpose and practise this art: these, when the body has been brought to them, show to the bearers wooden models of dead men made exactly like by painting. And (they show) the finest style (of embalming), which they say is His (i.e. Osiris') whose name I do not think it right to mention in connexion with this matter. And they show the second style, which is inferior and cheaper; and the third, which is cheapest. Having explained them all, they learn from them in what way they wish the body to be prepared; then the relations, when they have agreed upon the price, depart; and the embalmers remaining in the workshops thus proceed to embalm in the finest manner. First they draw out the brain through the nostrils with an iron hook, taking part of it out in this manner, the rest by pouring in medicaments. Then with a sharp Ethiopian stone they make an incision in the flank, through which they take out all the bowels; and, having cleansed the interior and rinsed it with palm-wine, they next sprinkle it with pounded incense. Then, having filled the belly with

pure myrrh pounded, and cassia, and other perfumes, with the exception of frankincense, they sew it up again; and, when they have done this, they pickle it in natron, entirely covering it for seventy days: longer than this it is not allowable to pickle it. When the seventy days are expired, they wash the corpse, and wrap the whole body in bandages of flax cloth, smearing it with gum, which the Egyptians ordinarily use instead of glue. Then the relations, having taken the body back again, make a wooden case in the shape of a man, and, when it is made, they enclose the body in it; and thus, having fastened it up, they store it in a sepulchral chamber, setting it upright against the wall. Thus they embalm bodies in the finest manner.

Those who desire the second method, in order to avoid great expense, they prepare in the following way: when they have charged their syringes with oil made from cedar, they fill the abdomen of the corpse with it without making any incision or taking out the bowels, injecting it at the fundament; and, having prevented the injection from escaping, they pickle the body in natron for the prescribed number of days, and on the last day they let out from the abdomen the oil of cedar which they had before injected; and it has such power that it brings away the intestines and vitals in a state of dissolution, while the natron dissolves the flesh, and nothing of the body is left but the skin and bones. When they have done this, they return the body without any further operation.

The third method of mummification is this, which is used only for the poorer people: having thoroughly rinsed the abdomen with a purge (*gynnaia*), they pickle it in natron for seventy days, and then deliver it to be carried away.

Diodorus gives much the same account; he adds that the first method cost one talent of silver (about £150), the second twenty minæ (about £60), the third much less. He gives additional details about the mourning, saying that during the interval between the death and the burial the relatives abstained from the baths and from wine, ate the simplest food, and wore no fine clothes; and also with regard to the embalmers themselves, adding the picturesque detail of the stoning and flight of the *paraschistes*, which is of considerable religious interest.

He says (i. 91) that, after the 'scribe' had made the mark on the body indicating the place where the incision was to be made by the *paraschistes*, or 'ripper', the latter performed his duty with the 'Ethiopian stone' (as Herodotus says), and then immediately fled away, pursued by a volley of stones and imprecations from the other embalmers, for the Egyptians held in abomination any person who wounded or committed any act of violence on the human body. We can see that this reason was not quite the correct one. The ceremonial stoning and fleeing away of the *paraschistes* was, like his ceremonial use of the 'Ethiopian stone' for the performance of his duty, an act of religious significance: the necessary cutting of the holy body of the Osiris had from the first been regarded as an impious act though one necessary for the preservation of that body; therefore a religious act of disapprobation and punishment had to be performed, though doubtless no one but a fanatic would really endeavour to hurt the agent of necessary impiety. That the *paraschistes* was universally regarded as unclean, however, is certain; whether the actual embalmers, or *choachyte*, shared this reputation to any extent or not is uncertain. Diodorus says that they consorted freely with the priests, to whose lower orders they in fact belonged, and were allowed to enter the sanctuaries. Diodorus also mentions the practice, to which we have already referred, of keeping the mummy in the house after death, with considerable detail, even going so far as to say that the richer Egyptians kept their dead in magnificent chambers, and enjoyed the sight of those who had been dead for several generations. There is little doubt that this is rather a misunderstanding than an exaggeration: the magnificent chambers can hardly be other than the real tombs, in which the Egyptian could always, if he were so disposed, see the sarcophagi which contained the bodies of his ancestors. In all probability the tombs of private persons were not entirely covered up and hidden away, as those of the kings were, for many years after their deaths.

We have one instance in the tomb of Aahmes, son of Abana, the admiral of king Aahmes in the war against the Hyksos, at el-Kab. In it we see a portrait of his grandson, the well-known Paheri, and an inscription which says: 'Lo! here is the son of his daughter, the director of the works of this tomb as making to live the name of the father of his mother, the scribe of the reckonings of Amen, Paheri, deceased.' From this we know that he embellished his grandfather's tomb as well as constructed his own, and we see that an inscription about him could be inserted on the walls of the earlier tomb after his death even, which shows that at least the hall of offerings in a tomb usually remained accessible to the relatives of the deceased for generations after his death. Thus, indeed,

may the Egyptians well have felt satisfaction in seeing the coffins which contained their dead, and have regarded the dead, to a certain extent, as contemporaries, as Diodorus says they did, though we know that they never looked upon the actual bodies themselves, as he seems to think. Yet that the dead were actually kept in the houses for some time before their burial seems certain, and Lucian gives his personal testimony to the fact: *ταριχεύει δὲ ὁ Αἰγύπτιος οὗτος μέντοι—λέγω δ' ἰδὼν—ξηράνας τὸν νεκρὸν ξύνδειπνον καὶ ξυμπότην ἐποιήσατο* (*de Luctu*, § 21). This may have been a very ancient custom,—we may compare the way in which barbarian tribes still preserve the bodies of their dead chiefs or the dried heads of their enemies, e.g. the Dayaks of Borneo,—but we have no illustration of it on the Egyptian monuments, and we cannot doubt that Diodorus' account is due to a misunderstanding. The 'storehouse' in which Herodotus says the body was kept (*θησαυρίζουσι ἐν οἰκίᾳ θηκαίῳ, ἰστάντες ὁρῶν πρὸς τοίχον* [see above]) may either be a place for the temporary storage of the mummy, or the actual tomb. The detail as to the position of the coffin might seem to point to the former alternative, as the proper thing for the coffin was to be placed horizontally on the ground; but in later times it would seem that the coffin was often actually placed on end in the tomb, probably to economize space. Diodorus gives the same detail about placing the coffin on end, but says that this was done in a chamber which those who had not private tombs built on to their houses, in order to contain the mummy. Now it seems very probable that something of this sort was done by poorer Egyptians. Children are often found buried under the floors of the ancient houses, and during his recent examinations among the brick ruins of the ancient Thebes burnt by the generals of Esarhaddon in 688 B.C., Legrain found a burial chamber containing a mummy with *ushabtiu* of the 7th century B.C. This was undoubtedly a chamber built on to a house. Perhaps this may be the explanation of Herodotus' *οἰκίᾳ θηκαίῳ*, and of Diodorus' apparent statement as to the retention of the body for a long period above ground. Ordinarily, however, the body of a well-to-do person would be buried in a tomb when the period of mourning was over and the tomb ready, till which time it was, no doubt, kept in a special chamber in the house. The time between the death and the actual burial is given differently by different authorities as from three to ten months. According to Gn 50³, the embalming occupied forty days, and the period of mourning seventy days.

With regard to the actual funeral ceremonies Diodorus (i. 93) gives some details which are not borne out by the monuments, and are evidently due to misunderstanding. His description of the exaggerated mourning at the death of a king is probably correct, but the details about the funeral oration pronounced over the body by the priests, and the liberty allowed to the people to express their disapproval of a bad king and so prevent his proper burial, have no actual authority to back them up, and seem highly improbable. Yet we have a curious sentence in the inscription describing the battle of Momemphis, in which Amasis says that he gave Apries proper burial, 'in order to establish him as a king possessing virtue, for His Majesty decreed that the hatred of the gods should be removed from him'—which seems to tally somewhat with Diodorus' statement. Evidently a king not considered to be *neb menkh*, 'possessing virtue,' could be debarred proper burial as an Osirian. But the judge would doubtless be a successful rival or usurper, not the common people. No doubt all usurpers had not always been so politic as Amasis was, and we know that

the bodies of rival kings were often torn from their tombs and cast to the winds by their enemies, whether usurpers or 'usurpees': Amenmeses, of the XIXth Dynasty, is an instance in point.

A funeral ceremony of very peculiar character which was actually carried out in the case of the kings is not mentioned by Diodorus. This is the remarkable 'Festival of the End' (literally, 'of the Tail'), or *Heb-sed*. It would seem that in primitive times, as has been the case among many semi-savage peoples, the Egyptian king was not allowed to live beyond a certain term. He was then killed, and another took his place upon the throne, only to be killed himself eventually unless he died or was killed before his term had expired. The term was one of thirty years; at the end of his thirty years' reign the monarch was solemnly murdered and buried with all pomp and ceremony. But, as in the case of the human *ushabtiu* mentioned above, the growing humanity of later days, and doubtless the growing reluctance of the kings to let themselves be slaughtered, brought about a compromise. The king was no longer killed, but all the paraphernalia of the ceremony of his 'end' were preserved: he himself celebrated his own funeral ceremony, and performed mystic ceremonies before his own image as Osiris beneath the standard of the funerary wolf-god of Siut, Upuaut (sometimes called *Sedi*, the god 'with the tail'). At the same time his eldest son or other heir-apparent was usually associated with him on the throne, so that a new king appeared in fact as well as in theory. We have illustrations of the 'Festival of the End' from the time of king Den, or Udimu, of the Ist Dynasty; well-known later representations of it are taken from the temple of Amenhetep III. at Suib in Nubia and the 'Festival Hall' of Osorkon II. at Bubastis. In later times the festival lost all significance, and Rameses II. and other kings celebrated it at far shorter intervals than thirty years. In the old days, even so late as the time of the Middle Kingdom, so far did the pretence of killing and burying the old king go, that very probably an actual *Heb-sed* tomb was made for his supposed dead body, a statue which was ferried over the river and carried in procession to the *sed*-temple and tomb. It may well be that the funerary temple of king Mentuhotep Nebhetep-Râ, of the XIII Dynasty, discovered by Naville and the present writer at Deir el-Bahari in 1903, is in reality a *Heb-sed* temple: the great hypogæum beneath its western hall, which they called a 'ka-sanctuary' or a 'cenotaph,' may then, if it is not the actual tomb, be the *Heb-sed* tomb of the king, and the neighbouring tomb called the *Bab-el-Hosdn* may be the *Heb-sed* tomb of another king of the dynasty.

Connected with Diodorus' statement as to the popular judgment of the virtue of a deceased king is his remarkable description of the carrying of the body of every man to a certain lake, where it was judged by forty judges, before whom any one could make accusations against the dead man: if these were substantiated, he was adjudged unworthy of proper burial; if not, his traducers were heavily mulcted, and his body was placed in a *baris*, or boat, and ferried across the lake to the place of burial. There is no doubt whatever that nothing of this kind actually took place, and that Diodorus or his informants were misled into thinking that the judgment of the dead man by Osiris and his forty-two assessors happened upon earth instead of in the next world: the lake and the boat are equally taken from the pictures of the 'Book of the Dead.' A full description of what is known to us from Egyptian sources as to the real proceedings at the funeral of an Egyptian of high rank will be found in Wallis Budge's book *The Mummy*, p. 153 ff. This account is based largely upon the evidence of the well-known 'Papyrus of Ani,' in the British Museum.

In accordance with Egyptian conservatism in religious matters, the bier and the various chests containing canopic jars, etc., which were borne to the tomb, were not till a comparatively late period placed upon wheels. The ancient sledge-runners of the days before the invention of the wheel were still used when the funerary rites were elaborated, and, when, at a later period, wheeled carriages were introduced for the funerary procession, the old sledge-runners were still preserved, and the wheels were placed beneath them. Oxen were used to drag the carriages to the tomb. The chief priestly participants in the procession and in the rites performed at the tomb were the *kher-heb*, or 'cantor,' as the word is sometimes translated, the *sem* or *setem*, and the *an-mut-f*. The *kher-heb* seems to have acted as a sort of general director of the funeral; he was often a relative of the deceased.

He read the appointed prayers and spells. The function of the *an-mut-f* is not clear. He seems to have represented the god Osiris, and walked in the procession, bearing the crook and flail, the emblems of the god. The *sem* had very peculiar duties. On the night before final burial, after the procession, he proceeded to the tomb, and there laid himself down to sleep, covered with the mystic cow-skin, before the upright coffin containing the mummy. During his sleep he was supposed to 'see all the transformations of the god,' i.e. the dead man, in the next world. In the morning three persons preceded the procession and solemnly aroused the *sem*, who then took part with the *kher-heb* in a sort of antiphonal service, in which the two took the parts of Horus and Isis, that of Osiris probably being taken by the *an-mut-f*. Finally the *sem* donned the skin of a leopard, and performed the very important ceremony of the 'Opening of the Mouth and Eyes,' in order that the dead man might be able to see and eat the offerings brought to him. The 'opening' was performed by touching the mouth and eyes of the mummy with a model adze or chisel of antique form. The ordinary ceremonies of offering at the grave were performed by the *hen-ka*, or 'servant of the ghost,' in the case of a private person a near relative, in that of the king a regularly appointed priest. The funerary chapels of the kings had broad lands assigned to them for their maintenance, and in the time of the XIXth Dynasty developed into huge temples, of which the Ramesseum and Medinet Habu at Thebes are examples. These, like the royal tombs, were decorated with funerary subjects taken from the Theban 'Books of the Under World,' already mentioned; but in the royal temples scenes of the ordinary life of the monarch were also introduced. The private tombs are almost exclusively decorated with such scenes, as they had been in earlier days.

An interesting circumstance in connexion with the funerary chapels and tombs may be mentioned here. Since Osiris had become, in succession to Anubis, pre-eminently the god of Abydos, the necropolis of that place became, so to speak, the metropolis of the under world, to which all ghosts who were not its rightful citizens would come from afar to pay their court to their ruler. So the man of substance would have a monumental tablet put up to himself at Abydos as a sort of *pied-à-terre*, even if he could not actually be buried there; while for the king, who, for reasons chiefly connected with local patriotism, was buried near the city of his earthly abode, a second tomb would be erected, a stately mansion in the city of Osiris, in which his ghost could reside when it came to Abydos. We know that both Senusret III. and Aahmes I. had second tombs, which they never occupied, made for them at Abydos; queen Teta-shera, grandmother of Aahmes, had an imitation pyramid made for her there by her grandson (see ANCESTOR-WORSHIP [Egyptian], B); and it is by no means improbable that the so-called royal 'tombs' of the kings of the Ist Dynasty, the contents of which have already been described, were in reality cenotaphs also, the monarchs being buried elsewhere. And Seti I. and Ramses II. had funerary chapels at Abydos, which, as at Thebes, are large temples.

From this sketch it will be seen that, in spite of the conservatism of the Egyptians, especially in such matters as these, considerable development and alteration took place in their burial customs and cult of the dead during the course of centuries. A difference is noticeable between the appurtenances of the mummy under the Old and Middle Kingdoms and under the New Kingdom. In the earlier period *ushabtiu* of the conventional type were rare, but wooden models of boats and boat-

men, butchers and bakers at work, field-labourers, soldiers, women carrying baskets, and other figures of the same kind, which were all *ushabtiu*, were *de rigueur*. Under the New Kingdom these all disappear, with the exception of an occasional boat, and their place is taken by the boxes of conventional *ushabtiu* in the form of a mummy holding two hoes for agricultural work in the next world, and by a much greater number of amulets than had been usual before. Chief among these were the 'pectoral' and the 'heart-scarab,' often combined in one, and inscribed with a certain chapter of the 'Book of the Dead.' The ordinary small scarab is, of course, constantly found, but was quite as much an amulet of the living as of the dead. As a matter of fact it is commoner as an amulet of the dead under the Middle Kingdom than under the New Kingdom. The names of dead persons are constantly commemorated on scarabs of the Middle Kingdom, very rarely on those of the later period, except during the Saïte archaistic revival. It must be remembered that, although the idea of the design or inscription on the base of a scarab was originally derived from the inscription of a seal, and although actual scarabs were often used as seals, yet the scarab itself was always an amulet, typifying 'coming into being' or 're-birth,' expressing the hope that the 'members' of a man would ultimately re-unite in a new life.

From the time of the Theban domination onwards, papyri containing chapters of the 'Book of the Dead' were always buried with the mummy, so that he could have with him his guide to the next world and its dangers. In earlier times this was not done; only in the case of kings were the older series of spells, out of which 'The Book of Coming Forth from the Day' developed, inscribed upon the walls of their tombs. These are known to us as the 'Pyramid Texts,' and they are a most interesting monument of the archaic stage of the Egyptian language. Later such kings, as we have seen, had the spells of 'The Book of the Gates' and 'The Book of That-which-is-in-the-Underworld' similarly painted on the walls of their tombs. The style of mummification and of the coffin varied at different periods: the great rectangular coffins and sarcophagi of the early period are very different from the gaily painted cartonnage coverings and coffins in the human shape which were usual in later days. Later still a casket-like form was again preferred, and in the Roman period painted portraits of the dead, either on flat panels or modelled in plaster in the round, were inserted in the coffins. The *ushabtiu*, which from the XIXth to the XXIIInd Dynasty often represented the deceased in his habit as he lived, not as a mummy, in later days reverted to the mummy-form, till in early Ptolemaic days their use was practically abandoned. One of the latest known (now in the British Museum) is of the Roman period: it is of faience, but very rude in style, and bears in Greek letters the simple inscription Σωτηρ ναύτης—'Soter, a sailor.' By this time the Egyptian mummies and funerary ceremonies had become the theme of the half-derisive wonder of the rest of the world, and indeed we need hardly be surprised at the derision, for the whole spirit and practice of the ancient rites had degenerated utterly and they became mere ridiculous exhibitions, while the ideas which they were supposed to express became the sources of religious charlatanism and more or less humbugging 'philosophies.' So Egypt 'expired, a driveller and a show.'

DEATH AND DISPOSAL OF THE DEAD

(Europe, Pre-historic).—1. Palæolithic period.—Owing to the negative evidence of archaeological researches, there are no data with which to combat the supposition that during the earlier stages of the evolution of humanity little or no attention was paid to the disposal of the dead, the deceased members of a family or community being simply abandoned by the way, like those of the lower animals. Nor is it known in what precise phase of social culture the custom of burial became recognized as a sacred duty of the survivors, for it is still a debatable problem among archaeologists whether the reindeer hunters of the Palæolithic period, who frequented the caves and rock-shelters of the Dordogne and other parts of Western Europe, were in the habit of systematically burying their dead. The few human remains hitherto encountered in the débris of these inhabited sites, which are accepted without cavil as belonging to the people of that period, are held by some archaeologists to be those of persons who had been accidentally killed by the fall of materials from overhanging rocks, and their skeletons are now occasionally met with under circumstances which clearly establish the above sequence of events. On the other hand, those which show from inherent evidence that they had been intentionally deposited in the Palæolithic débris and attended with sepulchral rites are still regarded by some anthropologists as interments of later times. The three well-known skeletons found in the rock-shelter of Cro-Magnon have long been regarded as representing the people of the later Palæolithic period; but, as they were lying on the surface of the culture strata of the shelter, in a small open space between it and the roof which only became covered up by a subsequent talus, they are now often regarded as belonging to the Neolithic period.

That Neolithic people were in the habit of burying their dead in caves formerly inhabited by Palæolithic races has been frequently noticed and recorded by explorers. Thus, in the upper strata of the débris in the Schweizersbild rock-shelter, a Neolithic civilization was attested, not only by a characteristic assortment of relics, but also by the fact that the shelter had been latterly made use of as a cemetery which contained no fewer than 22 interments. The graves were dug into the underlying Palæolithic deposits, and ten of them contained the remains of children, as well as those of adults. Fourteen adult skeletons reported on by Kollmann belonged to two very different races, one of a fair size (5 ft. 3 in.), and the other so small as to be characterized as a race of pygmies. Dr. Nüesch, the explorer of this rock-shelter, thought that man in the Neolithic time visited it only for the purpose of burying, or perhaps cremating, the dead—an idea suggested to him by the large quantity of ashes in the upper strata. It would appear, from the facts disclosed during the exploration of this early inhabited site, that there had been no discontinuity in the human habitation of this part of Switzerland since the reindeer hunters made

this rock-shelter their rendezvous up to the Bronze Age; but no evidence of systematic burial had been detected till the true forest fauna of the Neolithic period had taken possession of the land (*Neue Denkschriften der allgem. schweizerischen Gesellschaft für die gesammten Naturwissenschaften*, vol. xxxv.).

The celebrated station of Solntré (Saône-et-Loire), which has given its name to one of the intermediate phases of Palæolithic civilization in de Mortillet's classification, had also been subsequently utilized as a cemetery up to, if not beyond, Roman times; but, although some of the graves were clearly shown by their contents to be of greater antiquity than others, it was impossible to assign any of them with certainty to the Solutréen period. Moreover, the cephalic indices of 18 crania submitted to Broca varied from 68.34 to 88.26—an extent of variability which could be better accounted for by a post- than by a pre-Neolithic population.

Palæolithic burials.—Formerly it was commonly held among anthropologists that the Palæolithic people had no religion. But a fresh examination of old materials and some more recent discoveries supply data which modify this deduction, if, indeed, they do not prove the contrary. It is difficult to epitomize the facts and arguments thus raised, but the effort must be made, as otherwise our evidence would resolve itself into a series of bare assertions.

The sepulchral phenomena associated with some of the human skeletons disinterred in the Mentone caves (Balzi-Rossi), notably those known under the names of *Barma Grande* and *La Grotte des Enfants*, leave no doubt that the bodies had been intentionally buried with their personal ornaments, coiffures, necklets, pendants, etc., made of perforated shells, teeth, fish vertebrae, pieces of ivory, etc. Among the grave-goods discovered along with some of these skeletons, were one or two well-formed implements of flint, which differed from those met with in the surrounding matrix in being made of large flakes of foreign material, and showing a style of workmanship more akin to the Neolithic period. The discovery of two skeletons, of a negroid type, in the *Grotte des Enfants*, which Verneau describes as belonging to a new race, intermediate between those of Neanderthal and Cro-Magnon, marks an important addition to human palæontology.

The *Chancelade* skeleton, found in the small rock-shelter of Raymonden (Dordogne) and described as that of a man of about 60 years of age, lay at a depth of 5 ft. from the surface, in Magdalénien débris, on the left side, with the hands and knees strongly bent towards the face.

L'Homme écrasé de Laugerie Basse (Dordogne) is here noted, because the evidence is conclusive that during life this individual had been crushed, probably while asleep, by a fall of rock from the roof, and that consequently the victim must have been contemporary with the Magdalénien débris in which he reposed. He lay on his side, with the knees bent upwards in front of the breast, and appeared to have been adorned with a series of shells distributed symmetrically on different parts of his person. The corner of a great stone, part of a fallen mass, lay across his spine, and doubtless had caused his death, as the underlying bones were crushed.

A remarkable contrast to the skeletons of Chancelade and Laugerie Basse is that recently found in a small grotto at La Chapelle-aux-Saints (Corrèze).

It is described as that of an aged man, about 6 ft. 3 in. in height, who had been buried in a prepared grave beneath a bed of undisturbed Mousterien débris, 12 to 16 in. thick. The grave measured 4 ft. 8 in. in length, 3 ft. 3 in. in breadth, and 1 foot in depth. The body lay on the back, with the legs bent upwards, the right hand flexed under the head, and the

left extended. Around the body were bones of various animals broken for their marrow, together with a few flint scrapers and bone pointers—supposed to have been the remains of a funeral feast (*L'Anthropologie*, xix, 619).

Another skeleton, which has a striking resemblance to that just described, was recently found in the under strata of the rock-shelter of Le Moustier, in the upper valley of the Vézère.

It is described as having been buried intentionally in the attitude of sleep, beneath undisturbed strata of Moustérien age. The right arm was folded under the head, and the left extended. Near the left hand lay a pointed flint implement of the *coup-de-poing* type (6½ in. long), and a little further on a flint scraper. The cranium is described as having the osteological characters of the Neanderthal and Spy skulls. The face was strongly prognathic, and there was no chin. The skeleton was that of a young man, about 4 ft. 10 in. in height, whose wisdom teeth had not yet been fully developed. Bones of various animals, some of them being described as partially calcined, were close to the body. Both the discoverers and Dr. Klaatsch, who examined this skeleton, formed the opinion that it had been intentionally buried with sepulchral rites (*ZE*, 1909, p. 637).

A further discovery of a portion of a human skull has been announced, at a place called Combe-Capelle, near the town of Montferrand-du-Périgord (Dordogne). From its osseous characters and associated relics this individual is regarded as occupying a chronological horizon intermediate between the Moustérien and Magdalénien periods.

It is a fact of some significance that all the races hitherto recognized as coming within the Palæolithic range of Western Europe are dolichocephalic, and that brachycephalic skulls are rarely found outside Neolithic burials, and then only in deposits of the transition period, to which reference will now be made.

2. Transition period.—Outside the haunts of these highly skilled hunters, artists, and workers in stone and bone, there existed, in certain parts of Europe, other communities, probably emanating from the same stock, who, owing to the exigencies of a changing climate and the gradual disappearance of wild animals from the plains, began to exploit new sources of food, which, in the course of time, caused a considerable divergence in their domestic economy. Thus, while the Chelléen and Moustérien culture relics can be more or less paralleled throughout the whole of Southern Europe, the artistic phases of the later civilization of the reindeer hunters are not forthcoming beyond a limited area, mostly in Southern France. Implements of Moustérien types have been found in the Mentone caves, but not a trace of the relics characteristic of the Magdalénien stations of France; and yet both sets of cave-dwellers may have been contemporary.

Perhaps the most interesting feature of the investigation of the 'kitchen middens' of Mûgem, in the valley of the Tagus, was the discovery of upwards of a hundred interments at various depths in the shell-mounds; but it does not appear that any special grave-goods had been associated with them.

From the data at our disposal the point of most importance to the present inquiry is that the recently discovered skeletons at Moustier and Chapelle-aux-Saints, which undoubtedly were survivals of the earlier types of humanity, appear to have been interred with sepulchral rites, so circumstantially carried out as to suggest that they were founded on an already established cult of the dead. But, however this may be, it cannot be gainsaid that, during the Neolithic civilization, there is unmistakable evidence to show that the disposal of the dead had become a sacred obligation on the surviving relatives and friends. By this time the sepulchral materials are overwhelmingly conclusive in support of the doctrine that religiosity and a belief in a future life were

the dominating factors in the social organizations of the period.

3. Neolithic period.—During the Neolithic period the cult of the dead prevalent among the peoples of Western Europe was the outcome of psychological ideas which linked human affairs with the souls of men, animals, and things in the spirit world. The writer agrees with the animistic theory of Tylor, which represents man as first attaining to the idea of spirit by reflexion on various physical, psychological, and psychical experiences, such as sleep, dreams, trances, shadows, hallucinations, breath, and death, and so gradually extending the conception of soul or ghost till all Nature is peopled with spirits. However this may be, there can be no doubt that the religion of these pre-historic peoples, as disclosed by their sepulchral remains, involved a belief in inter-communications between mankind and the supernatural world. When a prominent man died, his weapons, ornaments, and other cherished objects were placed in the tomb along with suitable viands for his supposed journey to the Unseen World; and, indeed, there is evidence to show that in some instances his favourite wives, slaves, and pet animals were sacrificed, and buried in different parts of the mound. The selected grave-goods were appropriate to the standing and tastes of the individual, so much so that on this ground alone the graves of distinguished men, women, and children are readily recognizable. Such facts undoubtedly suggest that the people of those times did not regard life beyond the grave as differing widely from that on earth. To them death was the portal to the community of departed heroes and friends, to which they looked forward, across the span of human life, with hopeful anticipation of a more perfect state of existence. Hence the abodes of the dead were considered of greater importance than those of the living. Constructed of the most durable materials, and generally placed on a commanding eminence so as to be seen from afar, the tomb became an enduring memorial for many generations, till eventually its actual purpose and meaning became lost amidst the changing vistas of succeeding ages. One of the most common and effective methods of perpetuating the memory of the dead was by rearing a mound of stones or earth over the grave. To this custom we owe some of the grandest monuments in the world's history—the Pyramids of Egypt, the topes and *dagobas* of India, the mighty mounds of Silbury and New Grange, the megalithic circles of Stonehenge and Avebury, together with the numberless rude stone monuments known as dolmens, cromlechs, menhirs, etc., scattered along the western coasts of Europe and extending into Africa. To comprehend fully the motives which underlay the construction of ancient sepulchral monuments, it would be necessary to examine not only their structural peculiarities and contents, but also their surface accessories, such as stone circles, cairns, mounds, menhirs, earthen ditches, etc. Although a strong family likeness permeates the whole series in Western Europe, they differ so widely in certain districts that to deal with their local peculiarities and distribution alone would entail at least as many chapters as the number of countries within that area. Then the attentions paid to the dead before, at, and subsequent to, the burial disclose a wide field of speculative research, involving the foundations of religion, ancestor-worship, and general cult of the dead.

(1) *Inhumation and cremation*.—Pre-historic sepulchres vary so much in form, structure, position, and contents that to make a systematic classification of them on the lines of their chrono-

logical development is almost an impossibility. One special element which complicates such an inquiry was the custom of cremating the dead, which appears to have originated in Eastern lands, and to have spread westwards, reaching the British Isles towards the close of the Stone Age. This practice, of course, introduced various innovations on the sepulchral customs previously in vogue. Burial by inhumation, which, according to Greenwell, was much more common in the Yorkshire Wolds, is thus described by that veteran explorer:

'It [the unburnt body] is almost always found to have been laid upon the side, in a contracted position, that is, with the knees drawn up towards the head, which is generally more or less bent forward: the back, however, is sometimes quite straight. So invariable is this rule, that out of 301 burials of unburnt bodies, which I have examined in the barrows of the Wolds, I have only met with four instances where the body had been laid at full length' (*British Barrows*, p. 22). 'In most cases there is nothing to protect the body against the pressure of the overlying soil, but now and then a few large blocks of flint or thin slabs of chalk have been placed round it, thus forming a kind of rude covering; and from the appearance of the earth immediately in contact with the bones, it would seem that turfs had sometimes been laid over the corpse' (*ib.* p. 18).

On the other hand, when the body was cremated, the incinerated remains were carefully collected and usually placed in an urn, and then buried. When no urn was used, the remains were laid in a little heap, either in the grave, over which a mound was subsequently raised, or in a hole in earth already consecrated to the dead, such as a former barrow. The corpse, thus reduced to a few handfuls of ashes and burnt bones, required no great space for its preservation either in a public cemetery or in a family burying-ground. Hence sprang up a tendency to diminish the size of the grave, and thus megalithic chambers gave place to short stone cists containing the body placed in a contracted position.

Simple inhumation, i.e. placing the body in a hole in the earth and re-covering it with the excavated earth, was probably the earliest method of disposing of the dead; and to mark the site the survivors naturally raised over the spot a mound of earth or stones. Among a sedentary population the next step in advance would be to protect the body from the pressure of the surrounding earth. This was usually done by lining the grave with flagstones set on edge, over which a larger one was placed as a cover, thus forming the well-known cist; sometimes, instead of flagstones, wooden planks were used in the shape of a rude coffin. The material used was not always a matter of choice, but rather depended on what was most readily procurable in the neighbourhood. Greenwell tells us that in the Yorkshire Wolds the stone cist, so common in other parts, was almost entirely wanting, because in chalk districts the requisite slabs were unprocurable. On the other hand, wood is so liable to decay that it is rare to find evidence of its having been used.

On one occasion the writer of this article was present at the excavation of a barrow, near Bridlington, under the guidance of Greenwell, and on reaching the primary interment there was only a large empty cavity, with nothing but the enamel of a few teeth lying on the floor to show that a burial had taken place. Greenwell, however, soon cleared up the mystery by pointing out the unmistakable impression of wooden beams on the clay walls of the empty space, which, doubtless, had formed some kind of coffin. A few instances of tree coffins have been discovered both in this country and on the Continent. One well-known specimen from a barrow at Gristhorpe is now preserved in the Scarborough Museum. It consisted of the trunk of a large oak, 7½ ft. long and 3 ft. 3 in. wide, roughly hewn and split into two portions; one of the portions was hollowed out to make room for the corpse, and the other formed the lid of this improvised coffin. Among the grave-goods were a small bronze dagger, 3½ in. long, containing 2 rivet holes for the handle, fragments of a ring and of an oval disk both of horn, together with a few flint objects (*Jewitt, Grave Mounds*, p. 43). Another remarkable discovery of a grave was made at Treenhöi, in Jutland, which contained a woollen garment, leg bandages, a horn comb, a small bronze

knife, and a bronze sword in its wooden sheath. The whole of the deposit in the grave was wrapped up in a large deer-skin, which probably had served as the warrior's outer cloak (*Worsaae, Danish Arts*, London, 1832, p. 62).

The stone-lined cist is perhaps the most widely distributed type of early grave known. From this to the megalithic chamber, with its sepulchral compartments, entrance passage, and superincumbent cairn, was an easy transition. But the chronological sequence thus suggested is of little value in dating these monuments throughout the British Isles, as there is evidence to show that some of the chambered cairns and long barrows were constructed before the introduction of cremation. Thus, in the counties of Gloucester, Wilts, Somerset, and some neighbouring localities, there are chambered cairns in which the primary burials were by inhumation, and the human skulls found in them belonged to a dolichocephalic race. Similar chambered cairns, containing remains of a dolichocephalic race, have been found in the Island of Arran; but as regards the analogous groups of sepulchral monuments further north, such as those in the counties of Argyll, Inverness, Sutherland, Caithness, and the Orkneys, it is conclusively proved that cremation and inhumation were contemporary from the very beginning; and the same remarks apply to the dolmens of Ireland. It would thus appear that, subsequent to the erection of the early chambered cairns of the Stone Age in Britain, there was a period of degradation in this kind of sepulchral architecture, during which the well-known barrows of the Bronze Age became the prevailing mode of burial.

In Scandinavia the Giant graves belonged to the Stone Age, but gave place during the Bronze Age to large stone-lined cists, suitable for more than one corpse. Finally, in the early Iron Age, both these monuments were discarded for simple burial, either by inhumation or after cremation; and there were then raised huge earthen tumuli, such as the mounds of Thor, Odin, and Freya at Gamla Upsala, and the ship barrow at Gokstad. The dolmens of the Iberian Peninsula, known as *antas* in Portugal, belonged to the Stone Age, and their interments, which were almost exclusively of unburnt bodies, showed that the people who constructed them were a dolichocephalic race—a remark which also applies to the cave burials of that country, some of which were older than the dolmens. Cremation appeared at a comparatively late period in the Bronze Age, probably owing to the distance of the Iberian Peninsula from the seat of its supposed origin.

The primary object of inhumation might have been nothing more than protection of the corpse from enemies and wild beasts; but, in the evolution of the grave from a mere hole in the earth up to the elaborately constructed chambered cairn, we must seek for a higher motive than a pious act of respect to the memory of a departed friend. The general idea entertained by archaeologists on the subject is that the grave was looked upon as also the temporary abode of the ghost, who was supposed to hover around the corpse till the natural decay of the latter had been completed—a process which took some time, and entailed on the ghost the irksome ordeal of passing through a sort of purgatory, or intermediate stage, between this life and that of the spirit-world. It is now surmised that the effect of fire had long been known as a means of purifying not only the body, but also the soul, from the pollution which death brings with it—an opinion which may account for the finding of so large a number of partially burnt bodies in graves, even before cremation was generally adopted. As soon as it became fully realized that burning was merely a speedy method of accomplishing the dissolution of the

body,—now regarded as nothing more than a mass of corrupt matter,—cremation became the culminating point of a religious cult, which taught that it was a most desirable object to set free the soul from its association with the corpse as speedily as possible.

But, whatever were the motives which led to the adoption of cremation, whether religious or sanitary, there can be little doubt that burial by inhumation was associated with religious rites and ceremonies long before its introduction into Western Europe. Subsequently both methods were practised concurrently during the whole of the Bronze Age, and down to the time when Christianity superseded paganism. According to classical writers, the Greeks and Romans practised both methods, but in fluctuating proportions, probably due to the influence of fashion or current religious opinions. That cremation was more prevalent among the richer classes was partly due to its being an expensive process, and, therefore, beyond the means of the common people. But one has to be cautious in drawing deductions founded on motives, as the predominance of one or other of these burial customs varied in separate districts, even within such a limited area as the Wolds of Yorkshire. On this point Greenwell writes (*op. cit.*, p. 21):

'In some localities on the Wolds it has been seen that cremation prevailed, though inhumation was the general custom throughout the whole district. In other parts of Yorkshire, however, cremation was all but universal; as, for instance, in Cleveland, where Mr. Atkinson's very extensive investigations did not produce a single instance of an unburnt body; and near Castle Howard, where a large series of barrows contained nothing but burnt bodies.'

Burial mounds are called 'cairns' when their constructive material consists of small stones, and 'barrows' when that material is ordinary soil; but not infrequently both substances were used in the same mound—a small cairn being often inside an earthen barrow. Their great diversity in external form gave rise to a number of qualifying epithets, such as 'long,' 'round,' 'oval,' 'bell-shaped,' etc. Sometimes the mound was surrounded by a ditch, or a stone circle, or both; and instances are on record in which one or both of these features were found within the area covered by the mound. Also, an interment, whether by inhumation or after cremation, may be found beneath the natural surface without any superincumbent mound, or any surface indications whatever. At other times, when the mound or cairn is absent, a standing stone, or a circle of stones or of earth, or a ditch may indicate the site of a burial. Sometimes the mound may be raised over an interment, whether burnt or unburnt, which had been simply laid on the surface of the ground. At other times a mound, seemingly of earth, and covered with vegetation, may contain a megalithic chamber with an entrance passage, and sometimes divided into sepulchral compartments. Structures of the latter kind were evidently family vaults, and often contained the osseous remains of several generations. As the abodes of the dead, specially adapted for the burial of unburnt bones, were continued after cremation began to be practised, it often happens that both burnt and unburnt remains are found in the same barrow. We have already seen that the earliest interments in the chambered cairns in the North of Scotland were burnt bodies.

(2) *Dolmens*.—Among the sepulchral monuments still extant in Europe, the megalithic graves, known as 'dolmens,' take the first place, not only for the wealth of evidential materials which they have supplied, but also on account of their great number, imposing appearance, and wide geographical distribution. A dolmen, in its

simplest form, may be defined as a rude stone monument, consisting of at least 3 or 4 stones, standing a few feet apart, and so placed as to be covered over by one megalith, called a capstone or table.

A well-known example of this kind in England is Kite Coity House, near Maidstone, which in its present condition consists of three large free-standing stones supporting a capstone measuring 11 ft. by 8 ft. Originally the spaces between the supports had been filled up by smaller stones, so as to enclose a small sepulchral chamber, and after interment the whole was then covered over by a mound of earth, but without an entrance passage.

Between this simplest form and the so-called *Giants' Graves*, *Grottes des Fées*, *Allées couvertes*, *Hünnebedden*, etc., there is an endless but regular gradation of structures in proportion to the number of supports and capstones used.

The well-known *Allée couverte* of Bagnaux, near the town of Saumur, measures 18 mètres in length, 6'50 in breadth, and 8 in height. It is constructed of huge flagstones, standing on edge, 4 on each side, with 4 capstones—the largest of which measures 7'50 mètres in length, 7 in breadth, and 1 in thickness. Another, near Esse (Ille-et-Vilaine), called *La Roche aux Fées*, and about the same length, is constructed of thirty supports and eight capstones, including the vestibule.

Although many of these free-standing dolmens show no signs of having been at any time embedded in a cairn or mound, some archaeologists maintain that that was the original condition of all of them—a theory which derives some support from their present dilapidated condition, for many of them may be seen throughout the whole area of their distribution in all stages of denudation. Were the materials which compose the tumulus of New Grange, in Ireland, removed, leaving only the large stones of which its entrance passage and central chambers are constructed, there would be exposed to view a rude stone monument similar in all essentials to that at Callernish in the Island of Lewis.

The covered dolmens greatly vary in shape and appearance, owing to vegetation and other natural surface changes; and, as to size, they range from that of an ordinary barrow—a few yards in diameter—up to that of New Grange, which rises, in the form of a truncated cone, to a height of 70 ft., with a diameter at the base of 315 ft. and of 120 ft. at the top. Silbury Hill is 170 ft. in height, and over 500 ft. in diameter at the base.

There is no rule as to the position of the entrance gallery, it being attached, sometimes to the side, as in the Giant's Grave at Oem, near Roskilde, in Denmark, and sometimes to the end, as in the tumulus of Gavrinis (Morbihan). The Drenthe *Hünnebedden*, which in the present day are all uncovered, had both ends closed and the entrance passage on the side facing the sun, as was the case in all the dolmens.

Ruined dolmens are abundantly met with in the provinces of Hanover, Oldenburg, and Mecklenburg. According to Bonstetten, no fewer than 200 are distributed over the three provinces of Lüneburg, Osnabrück, and Stade; but the most gigantic specimens are in the Duchy of Oldenburg. In Holland they are confined, with one or two exceptions, to the province of the Drenthe, where between 50 and 60 still exist. The Borgen *Hünnebed*, the largest of the group, is 70 ft. long, 14 ft. wide, and in its primitive condition contained 45 stones, ten of which were capstones.

In Scandinavia the dolmens are confined to Danish lands and a few provinces in the south of Sweden. In the former country, in addition to the great chambered tumuli, free-standing dolmens may be seen situated on the tops of artificial mounds, and surrounded by enclosures of standing stones either in the form of a circle (*Runddysser*) or oval (*Langdysser*).

Only one dolmen has been recorded in Belgium, but in France their number amounts to close on 4000, irregularly distributed over 78 Departments, of which no fewer than 618 are in Brittany. From the Pyrenees they are sparsely traced along the north and west coast of Spain, through Portugal and on to Andalusia, where they occur in considerable numbers. The most remarkable monument of the kind in Spain is that near *Alcalá de Guadalcázar*, little to the north of Malaga. It is 27 mètres long, 14 mètres wide, and measures 24 mètres high. The entire structure comprises 31 monoliths—ten on each side, one at the end and five on the roof. The huge stones are made of the Jurassic limestone of the district, and, like those of Stonehenge, appear to have been more or less dressed. The

entire structure, now partially exposed, was originally covered with earth, forming a mound 100 ft. in diameter. In Africa, dolmens are met with in large groups throughout Morocco, Algeria, and Tunis. According to General Faidherbe, who has examined five or six thousand specimens, they are quite analogous to those on the European Continent, with the exception that, in his opinion, none of them had been covered with a mound (*Congrès Internat.*, 1872, p. 408). In Great Britain, Ireland, and the Channel Islands every type of the sepulchral monument is met with, especially chambered cairns, stone circles, and barrows.

The manner in which these sepulchral monuments are distributed along the Western shores of Europe, to the exclusion of central parts of the Continent, in which no dolmens are found, has given rise to the theory that they were erected by a migratory race called 'the people of the dolmens,' moving, according to some, from Scandinavia to Africa, and, according to others, in the opposite direction. But this theory has fallen into disrepute. Their magnitude and local differences in structure, even in districts bordering on each other, show that their builders were a sedentary population. Besides, the skeletons found in their interior belonged to different races. Against the theory advanced by Aubrey and Stukeley, that these rude stone monuments had been used as Druidical altars, there is *prima facie* evidence in the care taken by their constructors to have the smoothest and flattest surface of the stones composing the chamber turned inwards. Also, cup-marks and other primitive markings when found on capstones are invariably on their under side, as may be seen on the dolmens of Keriaval, Kercado, and Dol au Marchant (Morbihan).

(3) *Cromlechs*.—The word 'cromlech,' as used by some English archæologists, is almost synonymous with 'dolmen'; but, as defined by Continental authorities and adopted by the present writer in this article, it is exclusively applied to enclosures (*enceintes*), constructed of rude standing stones placed at intervals of a few feet or yards, and arranged roughly on a circular plan—circle, oval, horse-shoe, or rectangle. In this sense it comprehends the class of monuments known in this country under the name of 'Stone Circles' or 'Circles of Standing Stones.' Stone circles are, or were formerly, more numerous in the British Isles than elsewhere in Europe. They generally consist of one line of stones, but not infrequently two or more circles are arranged concentrically, as may be seen in those at Kenmore near Aberfeldy, and Callernish in the Island of Lewis. At Avebury one large circle, 1200 ft. in diameter, surrounds two other circles placed eccentrically to the former, and each containing a second circle arranged concentrically.

Cromlechs may also be associated with alignments, menhirs, and other megalithic monuments, as at Carnac, Callernish, etc. In the British Isles, Scandinavia, some Departments of France, and elsewhere, they surround dolmens, tumuli, and cairns. Outside the ordinary stone circle there is often a ditch, as at Avebury, Stonehenge, Arbor Low, Ring of Brogar, etc. The most remarkable monument under this category now extant is Stonehenge, which differs from all others of its kind in having the monoliths of the outer circle partially hewn and connected at the top by transverse lintels. That most of the smaller circles have been used as sepulchres has been repeatedly proved by the finding of urns, burnt bones, and skeletons, sometimes deposited in the centre and sometimes at the base of the standing stones, or indeed anywhere within the circular area. It is difficult to believe that burial was the sole purpose of the large cromlechs such as Avebury, Stonehenge, the Giant's Ring near Belfast, Mayborough near Penrith, etc. This last consists of a circular mound composed of an immense aggregation of

small stones in the form of a gigantic ring, enclosing a flat space 300 ft. in diameter, to which there is access by a wide break in the ring. Near the centre of the area there is a fine monolith, one of several known to have formerly stood there. It is more probable that such enclosures were, like our modern churches, used not only as cemeteries, but for the performance of religious ceremonies in connexion with the cult of the dead.

(4) *Sepulchral caves*.—The custom of burying the dead in natural caves, to which we have already referred as having been met with in the Palæolithic period, was continued throughout the Neolithic and Bronze Ages. Discoveries of this character have been recorded in numerous localities throughout Europe, and especially in France. Professor Boyd Dawkins informs us that the most remarkable examples of caves used as sepulchres in Britain are to be found in a group clustering round a refuse-heap at Perth-chwaren, a farm high up in the Welsh hills, in Denbighshire:

'The human remains belong for the most part to very young or adolescent individuals, from the small infant to youths of 21. Some, however, belong to men in the prime of life. All the teeth that had been used were ground perfectly flat. The skulls belong to that type which Professor Huxley terms the "river-bed skull." All the human remains had undoubtedly been buried in the cave, since the bones were in the main perfect, or only broken by the large stones which had subsequently fallen from the roof. From the juxtaposition of one skull to a pelvis, and the vertical position of one of the femora, as well as the fact that the bones lay in confused heaps, it is clear that the corpses had been buried in the contracted posture, as is usually the case in Neolithic interments. And, since the area was insufficient for the accommodation of so many bodies at one time, it is certain that the cave had been used as a cemetery at different times. The stones blocking up the entrance were probably placed as a barrier against the inroads of wild beasts. . . . The Neolithic age of these interments is proved, not merely by the presence of the stone axe or of the flint flakes, but by the burial in a contracted posture, and the fact that the skulls are identical with those obtained from chambered tombs in the South of England proved to be Neolithic by Dr. Thurnam' (*Cave-Hunting*, pp. 155-168).

The same writer describes similar remains from caves in the limestone cliffs of the beautiful valleys of the Clwyd and the Elwy, near St. Asaph. He has also shown that the people who buried their dead in these caverns were of the same race as the builders of the neighbouring chambered tomb of Cefn, just then explored. The crania and limb bones were identical, and in both the tomb and caves the dead were buried in a contracted position.

In Scotland, human remains regarded as sepulchral have been found in some caves at Oban, which had been exposed by quarrying operations at the foot of the cliff overhanging the ancient raised beach on which part of the town is built. In one of these caves (M'Arthur Cave), along with some fragmentary skeletons, were two skulls sufficiently preserved to enable Sir William Turner to take correct measurements of their special character, from which it appears that their owners belonged to a dolichocephalic race, their cephalic indices being 70.2 and 75.4. Although no grave-goods are known to have been associated with these bodies, there is sufficient evidence from collateral phenomena to show that the chronological horizon to which they must be assigned is the Neolithic period.

Of all the countries of Western Europe, France has yielded by far the largest number of burials under this category. De Mortillet, writing in 1883 (*Le Préhistorique*, p. 698), states that he could count 117 in France distributed over 36 Departments, 24 in Belgium, 8 in Italy, and only 1 or 2 specimens in each of the other countries.

The following epitomized notices of one or two examples will give the reader some general idea of the importance attached to this class of sepulchral remains:

In the course of exploring the natural cave of Casa da Moura, near Lisbon, a large quantity of human bones, representing some 160 individuals, was disinterred. It appears that the Neolithic inhabitants had converted the grotto into a cemetery—which would account for the large number of bodies it contained. The bones were much decayed, only three or four entire skulls being amongst them, which so far indicated a dolichocephalic race. The upper portion of one of these skulls is of exceptional interest, inasmuch as it furnishes positive evidence of having been partially trepanned, thus disclosing the initiatory stage of the method of performing that operation (Cartailhac, *Les Âges préhistoriques de l'Espagne*, p. 84).

Of the French caverns which contained only long skulls, the two most remarkable are those of *L'Homme Mort* and *Baumes-Chaudes*, both in the Department of Lozère. In the former were nineteen skulls sufficiently well preserved to furnish the necessary measurements. Of these the cephalic indices of seventeen varied from 63·2 up to 76·7, and the other two were 78·5 and 78·8. There were, therefore, no brachycephalic skulls in this sepulchre, so that the race appears to have been comparatively pure. It may also be mentioned that some of the crania had been trepanned—a feature which, though at first overlooked, subsequently became the subject of much interest to anthropologists. The animal remains were those of the Neolithic epoch, but among them were none of the reindeer, horse, ox, or stag. Among the relics were a lance-head, and a portion of a polished stone axe. Drs. Broca and Prunières were of opinion that the individuals whose remains had been consigned to this ossuary belonged to an intermediate race, who flourished in the transition period between the Palæolithic and Neolithic civilizations, and thus became connecting links between the people of the reindeer caves and the dolmens.

The crania recorded from the station known as *Baumes-Chaudes* were found in two natural caverns distinct from each other, but opening on a common terrace. They contained a vast collection of human bones, representing some 300 individuals; but both were regarded by the investigators as the continuation of the same family burying-place, which, indeed, had not been altogether abandoned till the beginning of the Bronze Age, as one of the skeletons in the upper deposits had beside it a bronze dagger. In one of these caverns only chipped flints, rude implements of horn, etc., were discovered; but in the other there were a few arrow-points, a bead, some roundlets of deer-horn, etc., which suggested some progress in culture. The crania measured and classified in M. Salmon's list from the *Baumes-Chaudes* ossuary amount to thirty-five, and they are all dolichocephalic, the indices varying from 64·3 to 76·1. The average height of this race was calculated to be about 5 ft. 3½ in.

As examples of sepulchral caverns in which brachycephalic crania formed the majority, a series of caverns at *Hastières* and *Furfooz* in Belgium may be cited. Of 33 skulls from the former measured by Professor Houzé, six are dolichocephalic, eleven mesocephalic, and sixteen brachycephalic. The well-known cave at *Furfooz* (*Trou du Frontal*) was merely a rock-shelter with a projecting cavity extending inwards for some 2 metres, and about one metre in height and one metre in breadth, and closed in front by a large slab. This cavity was filled with human bones mixed with earth and stones, but none of the bones retained their relative positions as regards the rest of the skeleton, so that dismemberment must have taken place before their final deposition in the cave. From the number of lower jaws, whole or broken, it was calculated that this sepulchre contained 16 individuals, of whom 5 were children. The cephalic index of some of the skulls was over 80. A disturbing element in the conclusions suggested by this discovery was the presence of fragments of pottery among the contents of the cave; while outside the slabstone there was an accumulation of debris and food refuse, which, judging from the fauna represented by its osseous remains, belonged to the Palæolithic period. Hence, at the time, the human remains of *Furfooz* were regarded as belonging to that period—an opinion which is no longer held, as the sepulchre is now admitted to be of the Neolithic age (*Rev. de l'école d'anthr.*, 1895, p. 155 f.).

Artificial caves used for sepulchral purposes have also been discovered in certain Departments of France, more especially those with chalky formations, like the *Marne* district. Here upwards of a dozen stations, each containing a number of artificial caves excavated in the flanks of low hillocks, have been most successfully explored by Baron de Baye (see his *Archéologie préhistorique*, 1880). Among some hundreds of interments, over 120 crania, including various trepanned specimens and cranial amulets, have been collected and are now preserved in the *Château de Baye*. Associated with them were a number of implements, weapons, and ornaments of Neolithic types, such as stone axes and their handles, arrow points, flint knives, bone pointers, polishers, beads and pendants of amber, bone, stone (one of callais, like those of the tumuli of Brittany), fossil shells, teeth, and so on. Of the crania, 44 were submitted to Dr. Broca for examination, and are thus

classified:—dolichocephalic (71·6 to 76·7), 15; mesocephalic, 17; and brachycephalic (80 to 85·7), 12.

Dr. Broca recognized in these human remains the union of two races analogous to those of *Furfooz* and *Cro-Magnon*—the latter having already been identified by him as of the same type as the dolichocephalic people of *L'Homme Mort* and *Baumes-Chaudes*.

Some of these caves, especially those of *Petit-Morin*, are supposed to have been constructed in imitation of the dolmens, as they were preceded by an entrance passage and occasionally a vestibule, from which a low door, closed with a stone slab, led to the sepulchral chamber. Baron de Baye thinks that some of them had been used as habitations for the living before being appropriated to the dead, as they had sometimes niches and shelves cut out of the solid chalk walls, on which various industrial relics had been deposited. A rudely executed human figure with a bird-like nose, two eyes, a necklet, and breasts, together with the form of a stone axe in its handle, was sculptured in relief on the wall of the vestibule of one of the larger caves. This cave appeared to have been much frequented, as the threshold was greatly trodden down by the feet of visitors. M. Cartailhac explains this peculiarity by supposing that it was a place for temporarily depositing the dead before transferring them to their final resting-place. All these caves contained abundance of relics characteristic of an advanced Neolithic civilization, but without any trace of metals, and the surrounding neighbourhood is rich in flint objects of that period.

Finally, it may be observed that sepulchral phenomena and grave-goods associated with the artificial caves of France are precisely of the same character as those of the neighbouring dolmens and natural caves, thus conclusively showing that all these monuments belonged to the same epoch and the same civilization. Their relationship to the rock-cut tombs of Egypt, Etruria, Palestine, and other countries, we must leave to readers to work out for themselves.

(5) *Grave-goods*.—The gifts to the dead, as already mentioned, bear some relationship to the social position among the community in which the deceased lived. They include all manner of things—ornaments, weapons, tools, utensils, pet animals, and even the wives and slaves of great heroes. When a departed friend appeared in a dream dressed in his usual garments and armed with his favourite weapons, it was natural to suppose that these objects, as well as their owner, had shadowy existences in the spirit world. From this it is supposed that the pre-historic people believed that not only men, but animals and inanimate objects, had souls—a belief which may account for the frequency with which weapons and other grave-goods were broken.

The quality of grave-goods varied according to the culture and civilization prevalent at the time of the interment. During the Stone Age they consisted of perforated shells, teeth, pendants of ivory and coloured pebbles, stone axes, spear-heads, arrow points, bone pins, buttons, and other objects of the toilet. During the Bronze and early Iron Ages, to the above objects were added necklets made of beads of jet, amber, and coloured glass, rings, armlets, and fibulæ of bronze, and sometimes gold rings. The stone weapons gave place to others made of metal. In the absence of written records, the objects thus collected and collated form the principal materials on which archaeologists base a more or less positive system of chronology. Among the calcined bones of cremated subjects, small articles such as pins, beads, buttons, etc., are occasionally found, showing that the corpse had been clothed when subjected to the fire. When da-

posited in the earth without an urn, it has been argued that such objects had been used for binding the cloth or skin in which the calcined bones were wrapped up. From the quantity of objects sometimes deposited in the grave, it has been surmised that, when a person was possessed of property of rare and exceptional value, it was customary to bury it along with him, evidently with the intention of its being utilized in the world of spirits. As an illustration of this the following notice of a remarkable discovery of axes made of jade and other materials will be of interest:

The tumulus of Mont-Saint-Michel, which occupies a conspicuous position among the Carnac group of antiquities, rises to the height of 10 mètres, on an elongated base measuring 115 mètres in length by 58 mètres in breadth. In recent times the top of the mound was flattened, and the eastern third is now occupied by a chapel, while at the other extremity there are the ruins of a modern observatory. In 1862 a small megalithic chamber, some two mètres square and rather less than one metre in height, was discovered, and on the floor of the chamber, amidst a thick deposit of dust, the following objects were found: (1) Eleven beautifully polished axes of jade, varying in length from 9½ to 40 centimètres. Two of these celts were pierced near the point for suspension. One was broken into three portions, two of which were lying at one end of the crypt and the other at the opposite end. (2) Two large celts of a coarser material, both broken. (3) Twenty-six very small celts of fibrolite. (4) Nine pendants of jasper and 101 beads of jasper and turquoise, supposed to have formed a necklet; also a number of very small beads made of some kind of ivory. After the entire débris had been removed from the floor of the chamber, there were found, under a flagstone, remains of an interment occupying a shallow space between the floor and the natural rock (René Galles, *Bull. de la soc. polym. du Morbihan*, 1862).

(6) *Pottery*.—The pottery found with pre-historic burials consists of a variety of vessels collectively called 'urns'; but, as they are found in graves containing either burnt or unburnt bodies, they could not all have been intended for cinerary purposes, so that they have to be classified according to their ascertained special functions. Vessels associated with inhumed bodies are supposed to have contained food and drink—hence they are called 'food-vessels,' and 'drinking-cups' or 'beakers.' The cinerary urns, used exclusively for the purpose of preserving the cremated remains of the corpse, vary considerably in size, form, and ornamentation, being generally 10 to 18½ in. in height. They are narrow-based and wide-mouthed, with a broad overhanging rim to which the ornamentation is commonly confined; or they may be flower-pot-shaped, and ornamented by one or two transverse ridges. The food-vessel, which is considerably smaller, more globular, and more highly ornamented than the cinerary urn, is also wide-mouthed and narrow-based. As a rule it was placed with an unburnt burial in the vicinity of the head of the corpse.

Drinking-cups, or beakers, are tall, highly ornamented vessels, narrowing from the mouth to near the middle, then bulging out and again narrowing at the base. A few specimens have been found with a handle like a jug. Beakers are almost invariably associated with unburnt burials—only two out of 24 having been found by Greenwell in the Wold barrows, with cremated burials. Very small cup-shaped urns, often pierced with two or more holes in the side, and generally found inside a large cinerary vessel, are known under the name of 'incense cups'; but there is no evidence to support this suggested use of them, and they are now regarded as cinerary urns for infants.

The Hon. John Abercromby holds that the beaker is not only the oldest Bronze Age ceramic in the British Isles, but also an imported type from Central Europe by way of the Rhine Valley (*JAI* xxxii. 373ff.). As an interesting corollary to Mr. Abercromby's views, it has been observed that, in almost all the instances in which the beaker has been found associated with human remains, the skull was brachycephalic.

That sepulchral ceramics of the beaker type have rarely, if at all, been found in Ireland may be accounted for on the supposition that the Continental brachycephali were later in penetrating

as far as Ireland; or, perhaps, that the few who did find their way to that country did so by a different route from those who entered Britain by way of the Rhine Valley. Anyhow, the rarity of both beakers and brachycephalic skulls in the pre-historic burials of Ireland is a suggestive fact to the student of Irish ethnology.

(7) *Cemeteries*.—As population increased and the influence of religion became more powerful as a governing factor in social organizations, the isolated and sporadic graves of the earlier people gave place to their aggregation in the form of cemeteries in certain selected localities, which were thus, as it were, consecrated as common burying-grounds for the disposal of the dead. The remains of such cemeteries may be found dispersed throughout the whole of Europe. There is documentary evidence that in pagan times the Irish had regal cemeteries in various parts of the Island, appropriated to the interment of chiefs of the different races who then ruled the country, either as sole monarchs or as provincial kings.

This authority consists of a tract called *Senchus-na-Relec* ('History of the Cemeteries'), being a fragment of one of the oldest Irish MSS, and in it reference is made to the cemetery of *Taillten*, which Mr. Eugene Conwell of Trim has identified as a group of chambered cairns on the Loughcrew Hills, near the town of Oldecastle, Co. Meath. Mr. Conwell also quotes the following stanza, among others, from a poem in the same old MS, viz. *Leabhar na hUidhre*:

'The three cemeteries of Idolaters are
The cemetery of Taillten, the select,
The ever-clean cemetery of Cruachan,
And the cemetery of Brugh.'

On the ridge of this range of hills, which extends for a distance of about two miles, are situated from 25 to 30 chambered cairns, some measuring as much as 180 ft. in diameter, while others are much smaller and nearly obliterated. They were examined in 1867-8 by E. A. Conwell, and an account of his discoveries was published in 1873 under the title of *Discovery of the Tomb of Ollamh Fodhla*.

An analogous group of dilapidated chambered cairns, with settings of stone circles, may be seen at Clava near Inverness, and other localities in Scotland. Stonehenge is in the centre of a vast burying-ground consisting of barrows in groups over the downs.

Urn cemeteries, without any external markings to indicate the site of the burials, are frequently met with in the British Isles, being exposed by agricultural operations, and especially by the removal of clay beds for the making of bricks. As the underlying clay slides from under the covering of soil to a lower level, urns are frequently seen sticking in the broken margin of the surface soil. A small urn cemetery was recently discovered at the digging of the foundation of a villa in the town of Largs. The site was a low gravelly mound, and the cemetery disclosed an unique feature in the finding of a stone-lined cist covered over with a large flagstone and containing seven flower-pot-shaped urns, all having more or less calcined bones in them (*Archæologia*, lxii. 239-250).

In 1886, in the course of removing the surface-earth above a gravel- and sand-pit at Aylesford in Kent, the following relics were discovered: a wooden pail or *situla*, with a bronze band ornamented with late Celtic designs; a bronze jug (*oenochos*); a long-handled pan and two *fibulae*, also of bronze, together with calcined bones and fragments of pottery. 'These objects were discovered in what had been a round burial-pit, about 3½ ft. deep, the sides and bottom of which had been coated with a kind of chalky compound. The bronze *situla* contained burnt bones and the *fibulae*,

the bronze vase and pan lying outside it, while around were the remains of several earthenware urns, some of which had been used as cineraries.' The discovery, fortunately, came under the notice of Dr. A. J. Evans, who lost no time in making a full inquiry into the circumstances. The result of his researches was a paper, 'On a Late Celtic Urn-Field at Aylesford,' which appeared in 1890 (*ib.* lii.). The conclusion to which Dr. Evans comes, after a wide comparison of Continental ceramics, is that the Aylesford urns are 'the derivatives of North Italian, and in a marked degree old Venetian prototypes.'

Perhaps the most instructive cemetery in Europe is that of Hallstatt, of which the present writer has elsewhere given the following brief account:

'The ancient necropolis, known as Hallstatt, lies in a narrow glen in the Noric Alps, about an hour's walk from the town of Hallstatt, situated on the lake of the same name. Discovered in 1846, and systematically explored for several years under the superintendence of Bergmeister G. Ramsauer, the results were published by Baron von Sacken in 1868, in a quarto volume with twenty-six plates of illustrations. One of the peculiarities of this cemetery was that it contained burials by inhumation and incineration indiscriminately dispersed over the entire sepulchral area, both, however, belonging to the same period, as was clearly proved from the perfect similarity of their respective grave-goods. The graves were thickly placed over an irregular area, some 200 yards in length and about that in breadth, but there were no indications above ground to mark their position. They were not arranged in any order, and their depth varied within the limits of 1½ to 5 ft.—a disproportion partly accounted for by the sloping nature of the surface, which caused a considerable rain-wash of the soil to the lower levels.

Out of 993 tombs described in v. Sacken's work, 625 contained simple interments; 455 had incinerated human remains; and in 13 the bodies had only been partially burnt before being interred. The inhumed bodies lay, generally, from east to west, having the face towards sunrise with the head occasionally resting on a stone. At other times the body lay on a prepared bed, or coarse casing, of hardened clay. In two instances traces of a wooden coffin were observed. Sometimes two or more skeletons were found in the same grave, while, at other times, some portion of the skeleton was wanting. The skeletons were not so scientifically examined as could be desired, but, according to Dr. Hoernes, they belonged to a well-developed dolichocephalic race, of medium height (5 ft. 6 to 8 in.), with a prominent occiput, long and slightly prognathic face, and a straight or gently receding forehead. The ashes and charred bones were carefully collected and deposited in the natural soil, sometimes laid over a flat stone, and sometimes in a roughly burnt trough of clay. Only twice were burnt bones found in a bronze vase, and once in a clay urn. When the cremated remains had been deposited the grave-goods were placed near them, after which the coarser pieces of charcoal were heaped over the whole.

An analysis of the contents of the graves gave the following results:—The 538 tombs, after inhumation, contained: bronze—18 objects of armour, 1543 articles of toilet, 57 utensils, and 31 vases; iron—165 objects of armour, and 42 utensils; 6 articles of gold, 171 of amber, and 41 of glass; 342 clay vessels; and 61 diverse objects (spindle-whorls, sharpening stones, etc.). Similarly classified, the relics in the 455 tombs after incineration were as follows: bronze—91 objects of armour, 1735 of toilet, 55 utensils, and 179 vases; iron—348 objects of armour, and 43 utensils; 59 articles of gold, 106 of amber, and 35 of glass; 902 clay vessels; and 102 diverse objects.

From these statistics it would appear that the burials after cremation were richer in articles of luxury—such as bronze vases and fibulae, beads of glass, gold cloth stuffs, etc., with the exception of objects of amber, which were more abundant with inhumed bodies' (*Rambles and Studies in Bosnia*², p. 399 ff.).

It may be noted as a point of some significance, that neither silver nor lead has been found in Hallstatt. Their absence, together with that of money, has been used to support the opinion that the cemetery was discontinued before these metals came into general use about the beginning of the 4th cent. B.C.

Baron von Sacken assigned the Hallstatt cemetery to the second half of the millennium immediately preceding the Christian era, and thought that it might be in continuous use till the advent of the Romans into that part of Europe. But, according to other writers, this range ought to be extended further back by several centuries, even to 1000 B.C. Owing to commercial currents from Eastern lands, especially by way of the Adriatic, and also, no doubt, to changes initiated by native skill, we might expect a considerable variation in the technique of the Hallstatt relics, even on v. Sacken's hypothesis of the more limited duration of the cemetery. The collection as a whole is thus a mere jumbling together of an assortment of objects, influenced not only by a rapidly progressing civiliza-

tion, but also by a continuous importation of new materials; hence the difficulty of classifying them into a more precise division than earlier and later.

In the cemetery of S. Lucia, near Tolmino, above the head of the Adriatic, in which incineration was almost exclusively the mode of sepulture—there being only three interments by inhumation out of 3000 tombs examined by Dr. Marchesetti—the warlike element was represented by only one sword, two spears, and seven lances (all of iron). The sword is distinctly the La Tène type—thus suggesting that the peaceful ways of the people had been disturbed only in later times, probably during one of the marauding excursions of the Gauls into Italy. On the other hand, the *fibula* numbered 1629 of bronze and 108 of iron; of which 248 were of the 'Certosa' type—i.e. not much earlier than 400 B.C.—and 3 of the La Tène type. Of metallic vases there were eighty of bronze and one of iron, among the former being six *ciste a cordoni*. A few of these bronze vessels were decorated with dots, circles, and perpendicular flutings, but rarely with animal figures, and all in the same style of art as the analogous objects from Hallstatt.

(8) *The proto-historic people of Western Europe.*—As a general result of the preceding remarks on the sepulchral phenomena of Western Europe, the following propositions may be accepted as a fair summary of the ethnic elements, so far as these have been determined by modern research, which have helped to mould the physical characters of the highly mixed population now inhabiting the British Isles, but, of course, altogether apart from the influence of the environment.

(a) Anthropological researches have shown that during the Neolithic Age a long-headed race, of short stature but strong physique (average height 5 ft. 5 in.), who buried their dead in rudely constructed stone chambers, had spread over the whole of Western Europe, from the Mediterranean to the south of Scandinavia. Tacitus informs us that he identified the Silures, a people then occupying South Wales, as Iberians, on account of their swarthy complexion and curled hair (*Agricola*, xi.). The inference that these Silures were the direct descendants of the primitive long-headed people was not unreasonable, more especially as by that time the eastern parts of Britain had been taken possession of by successive waves of Gaulish and Belgic immigrants from the Continent—thus causing the earlier inhabitants to recede more and more westwards. And, if this is so, it follows that the long-headed men of the chambered cairns of Britain, Ireland, and France, as well as many other parts of the Continent, had a swarthy complexion, with dark hair and eyes, like so many people still inhabiting the more secluded parts of these localities.

(b) The incoming brachycephali were taller than the dolichocephali already in possession of the country—a statement which is proved by actual measurements of skeletons (average height 5 ft. 8 in.). Although they have been described by many modern writers as 'light in hair and complexion' (Greenwell, *op. cit.* p. 636), there does not appear to be any archaeological evidence to support this assertion. The mistake seems to have arisen from inadvertently applying to the Bronze Age brachycephali qualities which were undoubtedly applicable at a later period to the Celts of history. The former buried their dead in short cists and round barrows, and carried with them a knowledge of bronze. While these two early races (the dolichocephali and brachycephali) were living together, apparently in harmony, the custom of disposing of the dead by cremation spread over the land—a custom which was introduced from the Continent, and had its origin probably in the strong religious

elements of the time, as it was practised by both races.

(c) At a considerably later period, but not many centuries prior to the occupation of Britain by the Romans, there was another Continental wave of immigrants, generally regarded as an offshoot of the *Galli* of classical authors, and probably the *Belgæ* of Cæsar, who introduced the industrial elements of the civilization known in this country as 'Late Celtic.' These newcomers differed radically from the former so-called Celtic invaders in having dolichocephalic heads—a statement which is supported by archaeological evidence; for example, a skull found in a characteristic Late Celtic tumulus at Arras, Yorkshire, was described by Dr. Thurnam as having a cephalic index of 73·7. They were a branch of the Celts of history, whose very name at one time was a terror in Europe; and by classical writers they are described as very tall and fierce-looking, with fair hair, blond complexion, and blue eyes.

(d) The next and last of the great racial elements which entered into the ethnic composition of the British people of to-day were the successive Teutonic invasions from Germany, Denmark, and Scandinavia, all belonging to a tall blond dolichocephalic people who existed in Central Europe from time immemorial—possibly the descendants of the Neanderthaloid races of Paleolithic times.

There is no reference made here to the Roman occupation as a factor in British ethnology, because the Romans were a mere ruling caste, who, although they introduced new arts, industries, and customs into the country, kept themselves aloof from the natives, and did not, as a rule, intermarry with them. Hence, when they finally abandoned Britain they left its inhabitants racially unaffected, much as would be the case with India if the British were now to retire from it. To-day we hunt for remains of military roads, camps, accoutrements of war, and other relics of their civilization, but of their skeletons we know very little, and of their British offspring nothing at all.

R. MUNRO.

DEATH AND DISPOSAL OF THE DEAD (Greek).—Burial was the method of disposing of the dead followed by all the Mediterranean peoples during the Neolithic epoch, and the same custom obtained in Greece, and was continued without interruption at least until the Homeric period. That the Greeks of the pre-Mycenæan and Mycenæan civilization buried their dead is evident from the tombs discovered in Crete, in the Cyclades, at Mycenæ, Orchomenus, and Vaphio. It has also been proved that Schliemann was mistaken in believing that he found in the Mycenæan tombs indications of a partial cremation of the dead. In the island of Crete, Evans and Halbherr, who discovered many tombs of the Mycenæan epoch and others of different periods, found burial to be

the invariable custom without any sign of cremation, either partial or total.

Apparently, then, the first notice of cremation occurs in Homer; it is described with grim vividness, especially in the account of the obsequies of Patroclus (*Il.* xxiii. 110 ff.). Homer also offers an explanation of this new funerary custom, which appears to be contrary to the beliefs of the Greek people. He makes Nestor say that it is necessary to burn the bodies of those who died in battle, in order that the bones might be carried back to their native land to the sons of the dead (*Il.* vii. 331 f.). But this reason is inadequate to account for so profound a change of custom. The change from burial to cremation must already have taken place in the Homeric age, just as it had previously been made in Central and, in part, in Southern Europe. It was then introduced into Greece as it had been into Italy, and very probably by the same races who were afterwards known under the name of Aryan, and who originated many other changes in the customs of the peoples subdued by them.

While in some regions of Europe there was a period during which cremation prevailed (and among these regions must be included Northern and also, in part, Southern Italy), in Greece the ancient and the new practices flourished for a long time side by side, just as was the case in Rome; but in Rome, from the discoveries in the Forum and from those made in other parts of the city and in Latium, we can plainly recognize the substitution of cremation for burial. This does not appear so clearly in Greece; but it cannot have happened otherwise. At the time of the Homeric rhapsodies, cremation must have been in use quite as much as burial. In succeeding epochs both methods were employed, as may be gathered from Greek authors, who attest the existence now of the one custom and now of the other.

We have at the present day full information regarding the forms of the tombs used by the Greeks previous to the classic epoch, and especially in those characteristic periods which are to be referred to pre-Mycenæan and Mycenæan civilization both on the continent and in the various islands. The funerary architecture of these periods may be classified under four chief forms: (1) dome-tombs, (2) chamber-tombs, (3) shaft-tombs, and (4) pit-tombs.

The finest example of a dome-tomb is that of the tomb called the Treasury of Atreus at Mycenæ, discovered by Schliemann. Then come those of Orchomenus, of Vaphio, of Heraion, of Eleusis, and of other places, which are magnificently and splendidly decorated, not indeed like that at Mycenæ, although they have the same architectural form.

The chamber-tombs are distinguished from the dome-tombs by the rectangular form of their plan, the dome-tombs being circular; by their more or less flat roof; and also by the diminished height of the mortuary chamber. But, like the others, they have a corridor (*δῆμος*) for entrance, with a door of ingress, and they may also have a varying number of lateral chambers. These tombs were excavated in the rock, and are found throughout the whole of Greece and in the islands, especially in Crete, where they were discovered by Evans and Halbherr. Sarcophagi are found in them—sometimes one, two, or even four—made of terracotta and painted on the outside; or else there is a trench in them in which the corpse has been placed; or sometimes the corpse was laid upon the floor of the sepulchral chamber (Evans, *Prehistoric Tombs of Knossos*, p. 5; Orsi, *Urne funebri cretesi*, p. 2 ff.).

The shaft-tombs were dug in the ground and

covered with either rough or squared slabs of stone. In these graves the body was usually placed on its back; sometimes it was curled up.

The pit-tombs consist of a kind of well which was almost always excavated in the rock, with steps to descend into it; at the bottom an arched aperture is found which gives access to the sepulchral cell. The cell is generally supported by a double wall of rude blocks, and is sufficiently long to contain a skeleton stretched out at full length. But Evans remarks that this type of tomb, although it has different characteristics, resembles in its cell the shaft-tombs.

In the island of Crete no dome-tombs have been discovered like those of Mycenæ or of Orchomenus; but the royal tomb of Isopates described by Evans and re-constructed by Fyfe (Evans, *op. cit.*) fills up the lacuna.

It appears to have been the primitive custom of the Greeks to bury their dead in the village where they dwelt, and sometimes in the houses themselves. It is certain that at Mycenæ tombs have been found in the houses, here and there in groups of five, or even of twenty, among the remains of habitations. At Athens, also, houses with tombs have been discovered. Plato makes mention of this custom, and calls it barbarous (*Min.* 315). It seems to have been abolished by the laws of Solon. The *agora* also appears to have been used for burying: Mycenæ supplies an example of this. Further, it is well known that in the classic epoch many Greek cities had, or believed that they had, in the *agora* the burial-place of their more renowned heroes.

It appears, further, that the Greeks in primitive times offered human sacrifices at funerals. This seems certain not only from the Homeric account of the obsequies of Patroclus, but also from some indications in the tombs of Mycenæ. In the *stomoi* of the rock-tombs, human bones have often been found, and in front of one sepulchre there were discovered six human skeletons placed cross-wise and mingled with the bones of animals and broken pieces of common utensils. From this it has been suspected that the bodies were those of victims sacrificed to the dead (Perrot-Chipiez, *Histoire de l'art*, vi. 564). Further, Plato says (*ib.*) that human sacrifices were offered in Lykaia (Λυκαία), and also by the descendants of Athamas, although they were Greeks and not barbarians.

From the most remote antiquity, as we gather from the pre-historic tombs, the Greeks had a religious cult for their dead. They considered the right of sepulture as sacred, and consequently as a law. This sentiment was handed down to the historic Greeks, the true Έλληνες. It was also a duty and a kind of Pan-Hellenic law (Πανελληνίων νόμος, Eurip. *Suppl.* 524) to give sepulture to enemies who died in battle. The law of Solon, which exempted a son from the obligation to support a father who had rendered himself unworthy, imposed upon him the duty of burying him with all due honours (Æsch. in *Timarch.* 13; the very words *δικαία, νόμιμα*, affirm the right of the dead to sepulture). In the classic epoch, religious belief was permeated with the notion that the spirit of the dead could not enter into the subterranean realm if the body had not received burial—the soul (ψυχή) would wander about without a resting-place, and would not be able to pass over the fatal river in order to enter Hades.

We do not know how the primitive Greeks conducted themselves between the death and the burial of the deceased; but from what we know of the historical epoch we may infer without any doubt what were their customs in primitive times.

In the pre-historic tombs of Knossos the corpse was buried in a grave, or else was laid on the

pavement of the sepulchral chamber, or in a sarcophagus in a *larnax* of clay. It was usually placed stretched out at length, or sometimes curled up, either in the grave or in the sarcophagus. There was no fixed direction or orientation of the position of the dead. In tombs of every type, objects belonging to the deceased are found, according to sex and condition: weapons, swords, knives, arrows, razors, ornaments of gold and of bronze, rings, seals, lamps, and so on. Tombs like those of Mycenæ and Vaphio have furnished objects of great value both as to their material—principally gold—and as to their artistic make. Objects which were most dear to the deceased, and which he had possessed when living, were placed with him in the tomb. This usage continued without interruption into the historic epoch, together with other usages which were gradually abolished by various successive laws, because they were held to be barbarous. We have proof of this in the Homeric period, which may be regarded as an intermediate one between the pre-historic and the historic periods, primitive funeral customs being still found which were no longer practised in the period which followed, as well as others which were retained.

In order to give an idea of this, it will be sufficient to relate in full what was done at the funeral of Patroclus, so admirably described by Homer (*Il.* xviii., xxiii.). We shall follow the poet's order:—

The corpse of Patroclus was washed with hot water (*Il.* xviii. 345 ff.), then anointed with unguents and oil, and covered from head to foot with a thin linen cloth. It was laid in state on a bed (*iv* λέγέσθαι, 352), and was wept over with great lamentation by Achilles and the Myrmidons (316 ff.). On the return from the fight in which Hector was slain, Achilles and the Myrmidons again wept over the bier of Patroclus, since weeping is an honouring of the dead (ὅ γὰρ γέρας ἐστὶ θανόντων, xxiii. 9). A funeral meal follows the weeping. The corpse is to be cremated, and accordingly an immense pyre is prepared which is to receive the body of Patroclus. When the pyre is ready, the transportation of the body takes place in the midst of a great cortège of armed men; Achilles supports the head of his deceased friend, while the Myrmidons cut off their locks and cast them upon the corpse, thus covering it. Achilles also sacrifices his hair, which he puts into the hand of his dead friend. During the night those who attend to the preparation of the funeral (κηδεμόνες, xxiii. 163) remain with Achilles. On the following day the body of the deceased is placed in the midst of the pyre, and is covered from head to foot with fat taken from the oxen and sheep which have been sacrificed; alongside are placed the dead animals, and amphoræ of honey and of oil. Four horses are sacrificed, and two of the nine dogs which the deceased possessed, together with twelve young Trojans who are to be burnt on the same immense pyre. The pyre burns all the night. In the morning the order is given to extinguish it with libations of wine, to pick out the calcined bones of the dead from among the other bones of men and animals—an easy task, since the body of Patroclus had been placed in the centre separate from the rest—and to enclose them in a cinerary urn between two pieces of fat. Finally, a tumulus of earth receives the urn, and is the sepulchre of Patroclus. But the funeral rites do not end here: Achilles orders funeral games, and distributes rewards to the victors (258 ff.).

In the classic period the dead body was washed, anointed with unguents and oil, and wrapped in a white garment. It appears, however, that the garment was not always white; it might be black. The eyes were closed, and the jaw was bound to the head in order that the mouth might remain shut when rigidity came on. The care of the dead was the business of the people of the house, especially the relatives, and among these the women. Further, a garland was placed on the head of the deceased. Afterwards the corpse was laid on an ordinary bed (κλίνη), and was exposed to view. This exposing (πρόθεσις) took place in the house, the feet of the dead being turned towards the door; a law of Solon prohibited an exposing before the door, as seems to have been done at first. This exposing took place the day after death. An earlier time was prohibited in order, naturally, that there might be assurance that

actual death had taken place; and, on the other hand, a too prolonged exposing was not allowed. According to Greek beliefs, the dead must be buried relatively soon in order that the soul might be able to enter the realm of the dead and might not wander about. Patroclus, whose body, on account of the solemn funeral rites, was exposed for twelve days after his death, says to Achilles, to whom he appears in a dream, *θάπτε με ὅττι τάχιστα, πύλας Ἀΐδαο περὶσω* (*Il.* xxiii. 71).

At what seems to be a late period, a piece of money was placed in the mouth of the deceased as a *ναῦλον* to pay the ferryman who transported him to the further side of the river into the realm of the dead. A honey cake (*μελιτοῦντα*) was buried with him, as an appropriate offering to the guardian of the doors of the infernal regions (*Aristoph. Lys.* 599). The scholiast on *Aristophanes* adds that the cake serves for Cerberus (*g.v.*), the piece of money for the ferryman, and the dead man's garland is for the struggle which he has undergone in issuing from life.

Upon the bier was placed a vessel of earth, usually a *λεγκυθος*, which contained an unguent. On this vessel, which was of a characteristic form, were depicted appropriate funeral scenes; and, in fact, it represented the deceased. At the door of ingress was placed an earthen vessel (*δοτρακον*) containing spring water (*Aristoph. Eccl.* 1033), which was to serve for purifying those who had been in contact with the dead, and in general all those who were in the house.

The exposing of the body was followed by its being carried (*ἐκφορά*) from the house to the place of sepulture, and this could be done only by day; criminals alone were buried by night (*Eurip. Troad.* 446), when sepulture was granted them at all. The dead person was carried on the bed upon which he had been exposed to view; but it is not easy to say exactly who were the bearers, although there are expressions like *νεκροφόροι*, *νεκροθάπται*, *νεκροτάφοι*, which imply persons specially employed in this duty of carrying and of burial. However, we gather from Plato, Plutarch, Lucian, and others that these bearers were young men who lent themselves to this pious duty. Plato speaks of young men of the gymnasium (*Legg.* xii. 947). When the conveyance of the body took place, it was attended by a cortège which accompanied the bier as it made its way to the sepulchre. According to the laws of Solon, the men must go first, the women must follow; the latter, moreover, must not be less than sixteen years of age (*Demosth. Arist.* i.). Plato describes at length (*Legg.* xii. 947) how the funeral cortège was to be formed, and he also notes that the women who took part in it must not be younger than the child-bearing age. The sepulchre (*θήκη*) must be excavated underground, of elongated shape, and must be constructed of stone. But the dead were not always laid in a tomb of stone without a coffin (*σορός*, *λάρναξ*). When the latter was used, it was made of cypress or other wood.

The different stages of the funeral were usually accompanied by weeping and lamentation on the part of the relatives and friends, and of other persons who visited the dead when exposed to view and attended him to the sepulchre. These manifestations of grief must originally have been excessive, and not different from those we have met with in Homer. They were prohibited by legislators like Solon and Charondas, who desired to restrain what appeared to many Greek writers to be clamorous and barbaric forms of grief. Plato describes as indecorous the weeping for the dead, and would have liked to prohibit lamentations (*θρηνεῖν*) outside the house (*Legg.* xii. 960). It is true that *Æschylus* (*Choeph.* 20 f.) and *Euripides* (*Hec.* 642 f.)

describe displays of grief such as striking the breast, tearing and lacerating the face and garments, and pulling out the hair; but probably these two authors wished to reproduce primitive customs which were no longer permitted in their day. In spite of legislative prohibitions, however, there was no cessation at funerals of more or less exaggerated manifestations of grief; the bier was certainly accompanied by funeral-singers (*θρηνηδοί*). Plato himself speaks of them (*Legg.* vii. 800) in the masculine only. This duty, however, was carried out also by women called *Καρίαι*, *θρηνηδοί*, *μουσικαί*, probably, as is supposed, from their Carian origin, whence came the employment of the term for those women who sang over the dead, just as a kind of flute was called Phrygian as having been invented by the Phrygians, *e.g.* *αὐλὸς θρηνητικός* (*Poll.* iv. 75).

While in pre-historic times the places of sepulture were either the houses or the streets of the city or village, or even the *agora*, in the classical period the Greeks had fixed places outside the city, cemeteries in the common and broad signification of the term; or else they made use of the roads outside of the city, as may still be seen in Italy, *e.g.* at Pompeii. Moreover, distinguishing signs or inscriptions were placed upon the sepulchres. The sepulchres themselves had different names, as *θήκαι*, *τάφοι*, *μνήματα*, and they might have different forms, among which was that of the tumulus (*χῶμα*, barrow). There were placed upon them *stelæ* (*στήλαι*), a kind of posts, or actual columns (*κίονες*), or little temples (*ναῖδια*, *ἡρώα*), or else horizontal slabs of stone (*τάπεζαι*), with inscriptions (*γραφαί*).

In the sepulchres in Greece, from the most ancient and primitive onwards, have been found objects and vessels frequently of great value, such as those of Mycenæ, of Vaphio, and of Crete. These were deposited in the tomb with the dead, and were objects which had belonged to him. Thus there have been found objects for the toilet, weapons, little figures of earth or of bronze, and, especially, bronze or earthen vessels. The sepulchres themselves contain the bones of domestic animals, among which are those of the horse. In the ideas and beliefs of the Greeks there was the conviction that the dead person must have for his journey to the subterranean world the same objects of use and of ornament which he had possessed when living, and also utensils and vessels which were proper for eating and drinking from, and containing food and drink. This usage did not cease in classic Greece, as has been proved by the vessels and other objects which have been found in the sepulchres of this epoch.

The burial was followed by the funeral meal (*περὶδειπνον*), already met with in the Homeric period, though not by the games, which had been abolished; and also by the purification (*καταλούεσθαι*). But solicitude for the deceased did not end here: on the third day after the burial, sacrifices (called *τρίτα*) were offered upon the tomb, especially on the stèle or other object placed on it; these sacrifices were repeated on the ninth day (*ἐνάτα*); and in the meanwhile the mourning began. This, in the majority of cases, lasted thirty days; the shortest period was twelve (*Plut. Lyc.* 27). As to external signs, mourning was shown by abstinence from everything which might cause joy and pleasure, and also by putting on a black garment, or clothing which was only in part black. According to Plutarch (*Quæst. Rom.* xiv.), it was a custom with the Greeks that during the mourning the women should shave off their hair, and the men should let theirs grow, if the regular usage was for the men to shave off the hair, and the women to let theirs grow. *Euripides* makes mention (*Iphig. Aul.* 1437 f.) of the cutting off of the hair

and the putting on of a black *peplum* for mourning. The Argive custom of wearing a white garment for mourning instead of a black one (Plut. *op. cit.* xxvi.) seems to have been an exception.

In Athens there was also an anniversary of the death called by Herodotus (iv. 26) *γερύσια*, a funeral feast, during which sacrifices were offered to the earth (*τῇ γῇ*)—a commemoration called by others *νεκύσια* or *ώραία*. It is to be supposed that such a commemoration was chiefly found in the case of men well known and highly thought of, notwithstanding that no distinction of persons or classes is made by Greek writers. But a general feeling of respect for tombs, and especially for ancestors, may be inferred from what one reads in Æschylus (*Pers.* 401 ff.) concerning the tombs of forefathers (*θῆκας τε προγόνων*). Just as in the commemoration on the third and ninth days after burial, so at the annual commemorations, there were sacrifices, offerings and libations (*ἐνθύσιμα*) to the dead, who was supposed to be already in the subterranean world; whence such libations took also the name of *χοαί*, and of *χθονία λουτρά*.

The unhappy criminal alone was denied sepulture and a funeral. In Athens the bodies of criminals were thrown behind the tower Melita and along by the northern walls of the city (Plut. *Them.* xxii.; Plato, *Repub.* iv. 439). The suicide's right hand was cut off; but he was granted burial. Plato would have the suicide buried in silence and without any sign of sepulture (*Legg.* ix. 873). Finally, to those whose bodies could not be obtained, cenotaphs or empty monuments were erected. Euripides (*Hel.* 1241) says that it was a law of the Greeks that he who died by drowning in the sea should be 'buried in a tissue of empty robes' (*κενοῖσι θάπτειν ἐν πέπλων ὑπόμασιν*).

G. SERGI.

DEATH AND DISPOSAL OF THE DEAD (Hindu).

Life and death stand in perpetual contrast. To give expression to this fact is the aim of Hindu ritual in all its processes, down to the minutest details. In the case of offerings to the gods the participants circumambulate the fire with their right side turned towards it, and in a direction from left to right; in offerings to the *manes* the left side is turned, and the direction is from right to left—the opposite of the sun's course (see CIRCUMAMBULATION); in the former case the right knee is bowed, in the latter the left; in the one the sacrificial cord is put on from left to right (under the right arm), in the other from right to left (under the left arm); ropes are twisted from right to left; even numbers are assigned to the gods, odd ones to the *manes*; to the former belongs everything that is young, healthy, and strong, to

the latter what is old, weak, or deformed. Everything that is bright-coloured—the forenoon, the ascending half of the month or the year—is assigned to the gods; whereas the *manes* have their portion in all that is dark—the afternoon, the descending half of the month or the year. Even in the course of a human life the 50th year marks a boundary, those who have not reached it belonging to the gods, those who have passed it to the *manes*.

Dread of the evil influence of the dead, their impurity, their return, and their interference with the living is another characteristic of the ritual. Fire-brands and jets of water serve to ward off this influence; stones are laid down between the village and the place of cremation; on the way home from the latter, care is taken to obliterate footprints in order to prevent the dead from finding the way, or perhaps to save the footprint, which is a possible subject of magic, from being exposed to the influence of hostile spirits; at the funeral ceremonies plants are selected whose names—such as *apāmārga*, *avakā*, *yava*—have a protective sense.

The living are bound to prepare the way for the dead in the other world, to provide them with food for their great journey into Yama's realm, and to supply them with means for crossing the rivers. These ends are served by the *ukrānti* or *vaitaraṇi* cow, which in some cases has been presented to the Brāhmins before his death by the deceased himself or his son. The same was originally, no doubt, the purpose also of the *anustaraṇi* cow, which is led along in the funeral train, and whose members are finally laid upon those of the dead, its kidneys being deposited in his hands as food for Yama's dogs. The streams which have to be crossed are probably indicated by the piece of reed which is introduced into the wall of the tomb, and which is meant to serve as a boat (cf. CERBERUS, BRIDGE).

The realm of the dead is variously located in the west or the south—occasionally in the east, no doubt in conformity with the conception of Rigv. x. 15. 7, which speaks of the fathers as *aruṇām upasthe*, 'in the bosom of the dawn.' The dead are sought for in earth and air and heaven, in sun and moon and stars—in the last named very rarely. In fact, we encounter a number of frequently contradictory views, which originated at different times and among different races, and which, after undergoing artificial amalgamation, now emerge in the Vedic ritual and its hymns (Hillebrandt, *Ved. Myth.*, Breslau, 1891-1902, iii. 414 ff.).

The usual method of disposing of the dead is cremation. But the well-known distinction drawn in Rigv. x. 15. 14 between *agnidagdhas* and *anagnidagdhas* (cremated and un-cremated *manes*) shows that other forms were known and practised. It is not at all impossible that Rigv. x. 18. 10 ff. originally referred to the rite of burial (Winternitz, *Gesch. d. ind. Litt.*, i. [Leipzig, 1905] 85). But our present ritual is not acquainted with burial except as applied to young children and ascetics, in whose case, from a motive half-philosophic, half-superstitious, and after a fashion known even at the present day, the skull was split with a coco-nut (Caland, *Altind. Bestatt.* § 50, p. 95). The only other trace which appears to point with any certainty to burial is found in the *śmaśānachiti*, which follows the placing of the remains in the urn. The Brāhmins were reluctant to abandon old customs; they modified them when necessary, and linked them on to other existing usages. Just as the *pravargya* ceremony—once an independent milk-offering—was combined with the soma-offering, so the non-obligatory *śmaśānachiti* may have been originally an independent custom. In the measures of this *chiti* Caland (*l.c.* 181 f.) has rightly seen the 'survival' of original burial; and the circumstance

that there the urn is not interred, but cast away, also appears to point to the independence of the *śmaśānāchiti*, for which urn-burial is not a necessity.

The data as to burial are found in the Vedic hymns, and especially in the Sūtras—the *Gṛhya* and *Pitṛmedha* and kindred texts—and in the records of modern usages. It is not without interest that many of the regulations of the Sūtras find parallels at the present day among Indian tribes. As we find the injunction that those returning from the place of cremation are to deposit stones or other objects between the dead man and his village, so 'the Mangars of Nepal obstruct the road leading from the grave with a barricade of thorns, through which the soul, conceived of as a miniature man, very tender and fragile, is unable to force its way' (*Census of India*, 1901, i. 355). On the other hand, our Sūtras do not contain an account of all the customs that existed or may have existed, and do not coincide with the ritual known to the *Rigveda*. An interesting illustration of this is supplied by Dr. Bloch (*Annual Report of the Archaeol. Survey*, Bengal circle, for the year ending April 1905, Calcutta, 1905 [ZDMG lx. 227 ff.]), who opened some burial-mounds at Lauriya, and found in the midst of them remains of a wooden post (*sthūnā*), which recalls the post mentioned in *Rigv.* x. 18. 13, and of whose meaning the Sūtra ritual gives us no idea.

It would be quite out of place here to treat even superficially of the huge mass of prescriptions to be found in published and unpublished texts, or of the variations presented by the usages of different schools and families. Caland divides the whole ceremonial into 114 acts, not to speak of the variations found in each of these. It is equally impossible to discuss the numerous verses which accompany the particular acts, and whose real relation to these is not always clear; or, more especially, the circumstantial casuistry with which the highly ingenious spirit of Brāhmanism has sought, in a manner that is far from uninteresting, to provide for all possibilities. Like the ceremonies connected with birth, those attending on death are a *saṁskāra*. 'It is well known,' says the *Baudhāyana Pitṛmedha*, iii. 1. 4, 'that through the *saṁskāra* after birth one conquers earth; through the *saṁskāra* after death, heaven.' Ritualists are therefore eager to have this *saṁskāra* performed with care and with regard to all circumstances. It may happen, for instance, that the Hindu dies in a foreign land and must be brought home, or that he dies there and remains forgotten. In the latter case cremation is performed in effigy upon a human figure composed of *palāśa* stems. Should it chance, however, that after all the man returns alive, the ritual provides even for this, and ordains that he must be born anew—i.e. undergo all the rites of *jātakarma*, in which he sits speechless and with clenched fists, like an embryo in the womb (Caland, § 44). When a prostitute dies, she must not be cremated, according to some teachers, with ordinary fire, but with that of the forest, wild and unchecked. Other regulations apply to the death of a widow or a woman in childbirth. If a man longs for death, he presents an offering, the various acts in which symbolize this longing (cf. *Kāt. Śr. S.* xxii. 6. 1). If one dies in the act of presenting an ordinary offering, certain rules are to be followed. But it is impossible to go into all this; only when the *Śrauta* Sūtras have been translated, will the historian of religion and the ethnographer obtain full insight into this circle of ideas. Here we must content ourselves with a brief account of the most important features of the ritual.¹

¹ For fuller details, see the present writer's sketch in *GIAP* III. 2; and Caland (*op. cit. infra*), whose work is thorough, and yet does not exhaust the enormous quantity of material.

1. Death.—When the Hindu feels the approach of death, he must summon his relatives, hold friendly converse with them, and, if the dying-hour is very near, have himself placed on a cleansed spot on sandy soil. It promotes his future weal to make presents before his death to Brāhmins; among these gifts a special value attaches to the *vaitarani*-cow as his conductor over the stream of the under world. His dying-couch is prepared in proximity to the three fires, or, if he keeps up only one, near to it, viz. the domestic fire, and here he is laid down with his head turned towards the south. In his ear are repeated passages from the *Veda* of his school, or, if he is a Brahmaid, from an *Aranyaka*. When death has taken place, they bring the corpse to a covered place, and then (or, with many, at a later stage) cut his hair and nails, which, according to Gautama (ii. 24), should be deposited in a hole in the ground. Many follow the practice (prohibited by others) of opening the body, removing the excrements, and replacing the entrails after they have been washed in water and filled with butter—a procedure intended, in the opinion of the present writer, simply to facilitate cremation, which would be hampered by the heavy *faeces*. Then the corpse, with its head turned towards the south, is laid upon a bier covered with a black skin; on the dead man's head is placed a wreath of nard; he is clothed down to the feet in a new robe, the old one being given to the son, to a pupil, or to the wife of the deceased, to be worn for life or till it becomes too old for use. Others have a piece of the death-robe cut off, and hand it over to be kept by the sons. Noteworthy is the practice of some, who bind together the thumbs (or the toes) of the deceased—a custom which, as Caland (*l.c.* 176) and Steinmetz (*op. Caland*) remark, is found also among other than Indian peoples (see above, p. 433*).

If the deceased has in his lifetime presented animal-offerings, three he-goats are provided; if he has offered *sāmnāyā* (sweet and sour milk libations) at new and full moon, a milk-offering (*āmikṣā*) is to be presented [evidently slight differences of cult going back to primeval times]. If goats are not used, many take 'black rice-grains', of which from one to three rice-paps are made. A remarkable figure is that of an old, un-horned, vicious cow (*anustarani*). When the cow is brought, the servants of the deceased have each to throw three handfuls of dust over their shoulders. At the head of the procession (according to the teaching of many) walks a man with a firebrand which he has kindled at the domestic fire; he is followed by the sacrificial fires of the deceased and the apparatus for the cremation ceremony, including the above-mentioned *anustarani* cow; next in order is the dead man on his couch, which is placed on a mat or on the before-mentioned bier, carried by servants, old people, sons, or relatives near and remote, according as the custom may be. In many circles it is the practice—still followed in certain instances in India—to employ for the transport of the corpse a waggon drawn by black oxen, and to place upon it also the fires and sacrificial utensils of the deceased. Behind the corpse come the relatives, the older ones first, men and women, the latter with loose dishevelled hair and their shoulders besprinkled with dust. [In points of detail we meet with many variations.] When the corpse is lifted, the invocation, 'May Paśan bring thee from here!' is addressed to Paśan, who in the whole ceremonial appears as *ψυχοπομπή*—a rôle already assigned him in the *Rigveda*. When a third or a fourth of the way has been covered, one of the goats is killed, or one of the paps of rice (or, if there be only one, a third of it) is poured upon a clod of earth thrown to the south. Thereupon the

company, with the younger ones in front, thrice circumambulate the corpse and the clod from right to left, with their hair loose on the left side and bound up on the right, at the same time striking their right thigh with the hand and fanning the corpse with the extremity of their garments. Then comes a thrice-repeated circumambulation from left to right, with the hair loose on the right side and bound up on the left, with a striking of the left thigh, but, according to the view of certain scholars, without another fanning of the corpse. The same procedure is repeated at the second third of the journey and at its termination. The rice-vessel is finally dashed on the ground, and its fragments so shattered that water will not remain upon them. [The variations encountered here in the practice of the different schools are numerous. Some walk along strewing small pieces of iron or roasted grains of rice upon the ground, while they recite or sing Yama-hymns. The Mādhyandinas deposit a rice-clod at the place of death, one near the door as they leave the house, one for the *bhūtas* half-way between the dwelling and the place of cremation, and one for the wind as soon as the place of cremation is reached, while one is deposited in the hand of the deceased.]

2. Cremation.—Special regulations, particularly as to its orientation, are offered for the choice of the place of cremation, which in some respects resembles the place of offering for the gods, while in others it is quite different. The duly selected spot is purified, and a formula is employed to scare away demons or ghosts. The kind of wood used, the size and orientation of the pyre, and everything of a like kind are regulated by rigid prescription, scarcely anything being left to caprice. The corpse is now (or later) laid on the pyre, the threads which bind the thumbs are loosed, the cords which hold the bier together are severed, and the bier itself is flung into the water or laid on the pyre, upon which the fires of the deceased also find a place. When all is done according to rule, the *anustarani* cow is brought forward, and so held by the relatives of the deceased that the youngest of them touches her hind-quarters, while the others are so arranged that an older person always touches a younger. The cow may either be slaughtered or—manifestly in connexion with a later custom—let go. The latter course must be followed in the case of one who has presented no animal-offerings. The animal is in that case led round the fires, the pyre, and the corpse, and with certain formulæ set free. To the north of the pyre the widow of the deceased crouches down, but (with formulæ which originally belonged to an entirely different ritual) is called on to rise and return to the world of life. There, too, is placed the bow of the deceased, which is afterwards cast upon the pyre. Upon the openings of the face are laid small pieces of gold, or at least melted butter is allowed to trickle down upon them. The sacrificial utensils of the dead, which he has had in his possession since the kindling of the fires, are distributed over his limbs, those of them that have a cavity being filled with butter—plainly for the purpose of feeding the fire; the two millstones (according to one version) are appropriated by the son, and so is everything made of copper, brass, or clay. In like manner the parts of the cow are distributed over the members of the deceased: the caul, for instance, being laid on his head and face, the kidneys (for Yama's dogs) being placed in his hands, along with a lump of curds (for Mitra-Varuna) if he has presented *sāmnāyā*-offerings. Before or during the process of cremation [here, as almost everywhere, different opinions prevail in the schools] the pyre is asperged after a fashion that may still be observed: the person performing this office walks round the pyre carrying

on his left shoulder a pitcher, in the back of which there has been made, by an axe or a stone, a hole through which the water runs out. After a triple circumambulation he casts the pitcher behind him.

Now begins the cremation, which is regarded as an offering into the fire, conducting the corpse to heaven as a sacrificial gift. In the *Dakṣiṇa*-fire are offered libations for Agni, Kāma, Loka, etc., and finally a libation on the breast of the deceased to Agni, 'who is now to be born of him as he once was of Agni.' If the man was an *Anāhitāgni*, the firebrand is taken from the domestic fire; if he was an *Āhitāgni*, the cremation is performed by the flames of the three or five fires kept up by him. Note is taken of which fire reaches him first, and it is augured therefrom whether the deceased has gone into the world of the gods or of the *manes*, or into some other world. To the north-east of the *āhavanīya* a knee-deep trench is dug, in which a certain water-plant is placed—clearly an ancient superstition—in order to cool the heat of the fire. The traditional explanation of the custom is that 'the dead man rises from the trench and ascends along with the smoke to heaven.' Behind the pyre a goat is fastened, but in such a manner that it is possible for it to break away, and, if it does so, nothing is done to prevent it. The cremation is accompanied by a number of verses or songs selected according to the school to which the deceased belonged. While the pyre continues to blaze, the relatives move off without looking round. The officiant gives them seven pebbles, which on their way home they scatter with the left hand turned downwards. [According to the prescription of another school, three trenches are dug behind the pyre; they are then filled with water from an uneven number of pitchers, and gravel is thrown in. The relatives enter the trenches, touch the water, and then creep through branches set in the ground behind, and bound together by a rope made of *darbha*-straw. The last to creep through tears the branches apart. Gautama directs a thorny branch, *Vaikhāṇasa* a grass snare, to be held in front of them, under which they must creep.] The company, as they leave the place of cremation, must restrain themselves from any exhibition of mourning, and go forward with heads bent down, entertaining one another with well-omened speeches and virtuous tales. Many tears, it is said, burn the dead (cf. *Raghuvamśa*, viii. 86). Yudhiṣṭhira is rebuked by Vyāsa for bewailing the death of his nephew. Story-tellers (*paṇḍīkas*, etc.) are therefore engaged in order to drive away by their skill the sorrows of the relatives (Lüders, *ZDMG* lviii. 706 ff.).

3. *Udakakarman*.—The offering of water to the deceased which follows is carried out in a variety of ways. According to one view, all the relatives—down to the seventh or tenth generation—must enter the water. They wear only a single garment, and the sacrificial cord hangs over the right shoulder; many also direct that the hair must be dishevelled and dust thrown upon the body. They turn their face towards the south, plunge under the water, call upon the dead by name, and offer him a handful of water. Then they emerge, bow the left knee, and wring their dripping garment.

An interesting usage prevails at the present day. Immediately after the bath a quantity of boiled rice and peas is set out for the crows (Caland, p. 78). This recalls the primitive notion that the dead appear as birds, and the comparison of the *Maruts* with birds, for the *Maruts* are an offshoot from the cult of the dead. Scarcely anything connected with the history of cults can be seen more interesting or more strongly reminiscent of the earlier times than an enormous Pipal tree—not the one sacred to the Buddhist community on the western side of the *stūpa*—growing to the north of the Buddhist sanctuary at Bodhi-Gayā, beneath which offerings to the *manes* are continuously presented, while blackbirds fly to and fro amongst its branches.

After the bath the relatives seat themselves

upon a clean grassy spot, where they are regaled with stories or Yama-songs. They do not return to the village till the first star shows itself, or the sun is partly set, or the herds come home. At the door of the house they chew leaves of the *pichumanda* (*Azadirachta indica*), rinse their mouth, touch water, fire, cow-dung, etc., or inhale the smoke of a certain species of wood, tread upon a stone, and then enter.

4. *Āśauca* (uncleanness).—The occurrence of death renders those associated with it unclean—a condition which lasts from 1 to 10 days, and is variously regulated according to circumstances and the usages of particular schools. 'After ten days' the mourning ceremonies for Indumatī are ended (*Raghuvamśa*, viii. 73). The prescriptions to be attended to during the *āśauca* are partly negative—in so far as they forbid certain things, such as the cutting of the hair and beard, study of the Vedas, *Gṛhya*-offerings; and partly positive—e.g. the enjoining of certain offerings. The first night a rice-ball is offered to the dead, before and after which water for washing is poured out for him, and he is called on by name. Milk and water are set out for him in the open air. Many set out perfumes and drinks for him, as well as a lamp to facilitate his progress through the terrible darkness that enshrouds the road to the city of Yama. Others cause a trench to be dug, into which perfumes and flowers are cast, while a pot suspended by a noose is hung over it. Even to-day the notion is to be met with that a thread serves the spirit of the deceased as a ladder to reach the drink suspended by it (Caland, p. 88).

5. *Samchayana*.—The collecting of the bones after cremation is usually carried out on an uneven day; according to some, during the dark half of the month, and under certain constellations. For the bones of a man a plain urn is employed; for those of a woman, a 'female' one, i.e. one adorned with breasts. The bones are picked up one by one, with the thumb and ring-finger, and are laid without noise in the urn. Among the Taittiriyaś this duty is performed by women, regarding the selection of whom the prescriptions vary. According to the rules of *Baudhāyana* they must attach a fruit of the *brhati*-plant to their left hand with a dark-blue and a red thread, mount upon a stone, wipe their hands once with an *apāmārga*-plant, and with closed eyes collect the bones with the left hand. The urn, which is closed with a lid, is placed in a trench prepared in the same manner as the place of cremation, and having no flow to it except rain-water; or it may be laid under the root of a tree. Others place grass and a yellow cloth in a trench, and then throw in the bones. From the latest period we have an account of how one 'puts [the remains] into a little new barrel, and throws them into the water, if there be any at hand, or, if not, into some desert and lonely place.' The Kapola-Banias tie up the bones in a piece 'of silken cloth, and the bundle so made is suspended to the bough of a tree in the burning-ground' (*JASB* iii. 8, p. 489; Caland, 105³⁴). Many schools enjoin a second cremation, in which the bones that have survived the first process are pulverized, mixed with butter, and then offered in the fire.

6. *Sāntikarma*.—This is another important department of the death-ritual. [In many ceremonies it comes at the point we have now reached, in many not till after the *śmaśānakaraṇa*. The reason for this appears to be that the *saṃchayana* and the *śmaśānakaraṇa* were originally parallel usages, which were only afterwards brought into connexion, and the *sāntikarma* continued in several schools to hold the place which belonged to it at first.] According to *Āśvalāyana*, the

ceremony is to be held on the day of new moon. The same authority directs that a fire, with ashes and fireplace, is to be carried southwards and set down at a cross-road or elsewhere; then the participants are to circumambulate it thrice, striking the left thigh with the left hand. [Others kindle an ordinary fire at a spot between the village and the *śmaśāna* ground.] Then they return without looking round, touch water, and furnish themselves with a number of new articles—jugs, jars, fire-sticks of *samī*-wood, etc. The fire is kindled afresh, and they sit till nightfall around it, entertaining one another with auspicious stories. When the stillness of night reigns, an uninterrupted stream of water is poured around the house from the south to the north side of the door, and then the participants take their places on an ox-skin that is spread for them. The formula uttered during this and other parts of the ceremony have regard to life and the averting of death. A stone is laid down to the north of the fire, 'to keep off death.' The young women anoint their eyes with fresh butter. Many texts speak also of the leading around of an ox, of which the company take hold and walk behind it: the one who closes the procession has to obliterate the footmarks. A strange notion entertained by certain Indian tribes is cited by Caland (*l.c.*) from the *Bombay Gazetteer* (xiii. 1, *passim*), to the effect that, at an assembly held on the 12th day, the dead man takes possession of one of the company and intimates what his friends are to do for him, or takes leave of his relatives.

The fundamental aim of the *sāntikarma* is to take effective measures to ward off evil and to return to ordinary life. Hence even the fire that served the deceased is removed—not, however, by the door—and extinguished outside. Its ashes are placed on a mat or in an old basket, and carried to the south or the south-west, where they are set down on a saliferous, and therefore unfruitful, piece of ground (Caland, 114). The new fire is kindled by the eldest son, after (or, sometimes, before) the removal of the old. The *Rigveda* is acquainted with a similar ceremonial, but the details of the ritual are considerably different (Hillebrandt, *Ved. Myth.* ii. 108 ff.).

Many of the ceremonies prescribed by the ritual literature for the *sāntikarma* are connected by some authorities with the *śmaśāna*: e.g. the digging of seven trenches to represent the seven rivers is met with sometimes in the one ceremony, sometimes in the other; but for the general interest of the subject it is a matter of no great importance to what part of the death-ritual we assign particular actions.

7. *Pitṛmedha* or *śmaśāna*.—The questions for whom and at what time the *śmaśāna* is to be performed have given rise to ritual discussion, and have been variously answered by the different schools. The season of the year and the reigning constellations are also of significance; on the whole, a preference seems to have been given to the day of the new moon. On the preceding day certain plants are rooted up at the spot destined for the *śmaśāna*, to the north of which earth is dug up, and from this are made the 600-2400 bricks which serve for the structure, besides the number (not precisely defined) employed for packing. The urn with the ashes is brought and laid between three *palāśa*-stakes driven into the ground inside a hut which must be between the village and the *śmaśāna* spot. If the bones are not to be found in the trench mentioned above, dust is taken from this spot, or the dead man is called upon from the bank of a river, and then any small animal (this being taken to represent him) that happens to spring upon an outspread cloth is treated as if it were the bones. Upon the three stakes is placed a perforated vessel containing sour milk and whey, which trickles through the numerous holes upon the urn below. To trumpet blast and the sound

of the lute the company circumambulate the spot after the fashion already described (striking the left thigh with the hand, etc.), and fan the urn with the extremities of their garments. [Many ritual authorities speak also of song and dance and female dancers: some do not mention the hut; others have additions to, or modifications of, the above. The variations are great, indeed: e.g. some place an empty kettle in the hut, and beat it with an old shoe.]

The ceremonies take place during the first, middle, and last parts of the night. The company repairs quite early to the *śmaśāna* spot, regarding whose extent there are widely deviating prescriptions. It must be out of sight of the village, in a hidden situation, yet visited by the rays of the midday sun. The spot must be staked off and surrounded with a rope, and—as in the case of the *agnichayana*, with whose ritual the *śmaśāna* has many points of contact—its surface must be covered with small stones. Furrows must be opened with a plough drawn by six or more oxen, and various seeds cast into them. In the middle of the ground a hole is made, into which gravel, saliferous earth, etc., are cast. Milk from a cow whose calf died is poured into the half of a bowl and stirred up with goats into a kind of drink; and this, or something else, is set out as food for the dead. [Towards the south (according to some) two crooked trenches are to be opened, and filled with milk and water. It may be mentioned, as one of the numerous and frequently characteristic details, that in the *śmaśāna* a piece of reed is immured, apparently to serve the purpose of a boat to the deceased (cf. above, p. 475^b).] The bones are laid down upon a bed of *darbhā*-grass, arranged in the figure of a man, covered with an old cloth, and asperged. The urn is destroyed. Over the remains is erected the monument, which conforms to a definitely prescribed plan, and in which the present writer sees the precursor of the *stūpa* of later days. When the structure has reached a certain height, food for the dead is walled in. After its completion, the *śmaśāna* is covered with earth, and water is poured over it from pitchers which it is the custom to destroy, or it is bestrewn with *avakā*-plants and *kūśa*-grass. Much is done also to separate the world of the living from that of the dead: the boundary betwixt them is marked by lumps of earth, stones, and branches; and the same purpose is served by the uttering of certain formulæ.

The soul of the deceased does not pass at once into the world of the *Pitara*s; it remains separate from them for a time as a *preta*, or 'spirit,' and has special offerings presented to it. But, after the lapse of a certain period, or when some fortunate circumstance occurs, the dead man reaches the circle of the *manes* through the instrumentality of the *sapindi*karana. The grandfather now drops out, since, as a rule, only three rice-balls are presented; but, as one of the *manes*, he receives his place in the ancestor-cult. This cult has struck its roots deep in Indian life. To feed the ancestors, to propitiate or keep them away, and to summon their aid, are the purposes served by the *śrāddhas* described in ritual- and law-books. The *śrāddhas* are offered either on special occasions, when fortunate occurrences take place, or regularly at certain periods of time. To the first category belong the birth of a son, the *nāmakarana*, and other festivals, when the *manes* are spoken of as 'cheerful,' and are honoured in the same way as the gods: to the second belong the daily worship of the *manes*, that on the day of the new moon, the monthly worship, the great offering to the *manes* at the four months' sacrifices, at the soma-sacrifices, and the *aṣṭakā* cele-

bration with the *anvaṣṭakya*, which coincide with the close of the year (see, for details, the present writer's sketch in *GIAP* iii. 2).

A. HILLEBRANDT.

DEATH AND DISPOSAL OF THE DEAD

(Indian, non-Aryan).—I. Conception of death: not due to natural causes.—The conception of death among the non-Aryan tribes of India does not materially differ from that entertained by other savage and semi-savage races. Death is not regarded as the result of natural causes, but is supposed to be due to the interference of devils, demons, or other evil spirits. This is particularly the case with diseases like dementia, the delirium of fever, and the like, which seem to indicate action by some indwelling spirit. This belief is naturally extended to accidents caused by wild animals, and deaths due to epidemic diseases, each of which is attributed to the working of a special disease-spirit. Hence many of these tribes use special means to identify the spirit, and the methods usually partake of the nature of Shamanism. The soul, again, is regarded as a little man or animal occupying the individual, which causes him to move. It leaves the body through the skull-sutures or other pure orifices of the body, in the case of persons who have lived virtuous lives; in the case of the wicked, by one or other of the impure exits. The soul may at times live apart from the body—a theory which explains to those who hold it the nature of dreams and the danger of waking a sleeper. There may be more souls than one, and these may have separate abodes—a belief accounting for the performance among some tribes of funeral rites at the place of death, at the grave, or at some other spot, where offerings are made to appease the spirit, and explaining much of the vagueness which characterizes their funeral ceremonies. The soul, again, is believed to be mortal; and with their lack of interest in their national history, and their imperfect recollection of past events, these people, after a time, regard their deceased ancestors as no longer objects of reverence or fear, and the attention of the survivors is concentrated on the more recently dead. The soul, when it leaves the body, is figured as a

naked, feeble mannikin, exposed to all kinds of injury until, by the pious care of its friends, a new body is provided for it. This often takes the form of a temporary refuge—a hut, a stone, a tree, or a piece of sacred grass. Or the soul may abide in an animal or insect; and this temporary refuge, or, among tribes who accept the theory of metempsychosis, this form of re-birth, may be identified by laying out ashes or flour at the scene of death. These, when carefully examined, often show the footmarks of the creature by which the soul has been occupied. Among the jungle tribes the soul is commonly supposed to abide in a tree—a belief which may in some instances have been suggested by the habit of tree-burial (see § 4 (h)). In W. India a common refuge of the soul is the *jivkhāda*, or 'life-stone,' which is selected at the time of the funeral rites, and to which offerings and libations are made. This naturally leads to a further development, when a rude image of the deceased is made, placed among the household gods, and honoured with gifts of food and drink. In some cases, as among the Kachins of Upper Burma, an attempt is made to enclose the soul within a barrier of bamboos, from which it is solemnly released at the termination of the funeral rites (*Gazetteer Upper Burma*, i. i. 409). Sometimes, again, during this intermediate period, the soul is believed to haunt the scene of death, and at a later period it abides in the grave or at the cremation-ground. When beliefs such as these are current among the people, it is obviously of supreme importance that the funeral rites should be duly performed. No infective tabu is more dangerous than that which proceeds from a corpse unpurified by the customary rites; and perhaps no people in the world devote more anxious care than the Hindus to placating the friendly, and repressing or scaring away the malignant, spirits of the dead.

2. *Spirits friendly and malignant.*—The line between these two classes of spirits is clearly drawn, and it is based on the close family- and clan-organization of the non-Aryan tribes. The souls of the family dead, unless they are irritated by neglect, are generally benevolent; the souls of strangers are, as a rule, malevolent and hostile. In the case of the former no means of placation are neglected. Some tribes, after the soul has left the body, endeavour to recall it, and invite it to abide with them as a house-guardian; others make a miniature bridge to enable it, as it returns, to cross a stream, and thus evade the water-spirit (cf. art. BRIDGE, ii. 2, c); others, again, make a pretence of capturing the soul and bringing it back to its home. The provision of fire and light for the soul, either in the house itself or at the grave, is more general. Sometimes rites are performed to guide the soul to its longed-for place of rest; or it is solemnly invited to leave the grave and ascend to the other world, where it is welcomed by the friends who have gone before—a conception of the realm of the sainted dead which may have been independently arrived at by the non-Aryan tribes, though the details may be due to Hindu influence. To secure the peaceful departure of the soul, it is essential that the due egress should be provided for it by removing the dying person into the open air or into an upper chamber—a precaution which possesses the additional advantage of relieving the house from the death-tabu. With the same object, the skull is often broken at the time of cremation. When death occurs, the soul is placated by the wailing of its relatives; or, as among the Kāndhs, it is exhorted to keep quiet, to employ its time in working in the other world, and not to transform itself into a tiger and plague its friends (Risley, *TC* i. 408). More remarkable is the procedure of the Nāgas of Assam,

who curse the evil spirit which has removed their friend, and threaten to attack it with their spears (*JAI* xxvi. 195, xxvii. 34; Dalton, 40). This custom apparently does not prevail among the Manipur branch of the tribe (T. C. Hodson, *The Nāga Tribes of Manipur*, 1911, p. 146 ff.).

After death, the wants of the dead are provided for by gifts of food and drink (see art. FOOD FOR THE DEAD). Among some tribes the feeling prevails that the goods of the dead man should be appropriated to his use, and not taken by his friends, lest the envious spirit may return and claim them (Dalton, 21, 205; cf. Crawley, *Mystic Rose*, Lond. 1902, p. 98). In some cases a viaticum, in the shape of a coin or some article of value, is placed with the corpse to support it on its way to the other world, as among the Pahāria (Hosten, 'Paharia Burial-Customs,' *Anthropos*, iv. 670, 672). But people in this grade of culture, while strictly governed by a regard for precedents, contrive to evade the duty by placing worthless representations of the dead man's effects in the grave, or by merely waving them over his pyre (Rivers, *The Todas*, 362 f.). The arms and implements which are often buried with the corpse, or placed upon the grave, are obviously intended for the protection or use of the dead; and these are sometimes intentionally broken, either in the belief that, if left uninjured, they are useless to the dead, or to render them unavailable, and thus prevent the rifling of the tomb. Special clothing is also sometimes provided for the soul, and, as the garments of the dead man are supposed to be infected by the death-tabu, they are generally presented to some menial priest, whose sanctity guards him from danger in using them. Ornaments are sometimes placed in the grave: a set of diadems, for instance, like those of Mycenæ, having been found in a S. Indian interment at Tinnevely, where they were probably deposited as amulets to protect the soul from evil spirits (Thurston, *Notes*, 149 f.). Some deposit with the dead a prayer written by the tribal priest; others, like the Gāros of Assam, slay a dog at the grave to guide the soul to Chik-mang, the tribal paradise; or, as among the Gonds, clay images of horses, on which the soul may ride to heaven, are placed on the tomb (A. Playfair, *The Garos*, 1909, p. 109; Oppert, 84 f.). Closely connected with this is the custom of slaying human victims at the funeral, in order that they may accompany and serve the soul. Some of the wilder Assam and Burma tribes, down to quite recent times, killed slaves with this object (*Gazetteer Upper Burma*, i. i. 553; F. Mason, *Burmah*, 1860, p. 92 f.). Blood being the favourite form of refreshment for the dead, it is provided by animal sacrifices. The victim is often slain at the grave, and its blood is poured upon it. The Andamanese mother places a shell full of her milk on the grave of her child, and the Dosādh of the United Provinces pours blood into a pit, so that it may reach the soul (*JAI* xii. 142; Crooke, *TC* ii. 354). With the same intention water is poured on the grave, or dropped into the mouth of the dead or dying man. Many articles of food placed with the dead serve the additional purpose of scaring evil spirits. Rites such as these, performed at the grave, naturally develop into a periodical feast held in the house or in some holy place; food, again, is offered to a rude image representing the dead. The final stage is reached when it comes to be believed that, by feeding the tribal priest or a Brāhman, the food passes on for the use of the soul.

3. *Rites performed to repel evil spirits.*—The rites performed in the case of the malignant dead assume another form. Such spirits are the souls of those who have been removed from this world by an untimely or tragical death—those of the

murdered, the unburied, the unmarried, childless women, robbers, men of evil life, and strangers. These are included under the general title of *bhūt* (Skr. *bhūta*, 'formed,' 'produced')—a term which does not necessarily connote malignancy, but is now generally accepted in this sense. They all cherish feelings of envy and malignancy towards the living, and it is necessary to placate or, more generally, to repress and coerce them. The souls of the unmarried dead are often propitiated by a mock posthumous marriage, in which a boy or girl represents the dead youth or maiden. For the unburied dead a mock funeral is performed over such relics of the dead as may have been recovered, or over an image representing the deceased. The soul of a dead bandit, as among some of the robber tribes of N. India, is sometimes deified and worshipped. The most common example of the discontented spirit is the *churel* of N. India, or, as she is called in the S., the *alvantin*, the spirit of a childless woman, or of one who has died within the period of sexual impurity. Like demons in other countries, she has her feet turned backwards, and is much dreaded. She is repelled by scattering grain on the road from her grave. When she rises, she halts to collect this, until the morning call of the cock forces her to return—a practice extended even to the benignant dead by the Pahārias of British Sikkim, who drive a nail through each finger and toe of a prospective *churel*, to prevent her from harassing the living (Hosten, 673, 679). The ghost of a mutilated person is also an object of fear; but, except among the Chakmas of the E. frontier (Lewin, *Hill Tracts*, 74), there seems to be no Indian example of the custom of mutilating the corpses of enemies to prevent them from 'walking' (though Hosten, 679, records, without having been able to obtain any explanation for it, the custom of the Yākhās of British Sikkim, who, 'when a man has died, split open his hands from the middle knuckles to the wrist'). Spirits of this description of the malignant dead are repelled in various ways. Some tribes have an annual ghost-hunt, by which the evil spirits are scared from the house and village. Guns are fired, gongs and drums are beaten, and rockets are exploded. Dances and other revels, in which the rules of morality are disregarded—indecentry being a mode of scaring evil spirits—are performed. Sometimes the rite takes the form of a mock combat—one band of performers representing the evil, and another the friendly, spirits; and it is always arranged that the latter shall be victorious (Lewin, *Wild Races*, 185). Some tribes measure the corpse, or watch it until it is buried, lest it may be occupied by an evil spirit.

The devices intended to prevent the return of malignant spirits are manifold. In some cases a cairn is raised over the grave (§ 4 (d)), or, as an additional precaution, the excavation is filled up with stones or thorns; or, as among many of the wilder tribes, the body is buried face downwards—a practice adopted by the Thugs. In Upper India the ghosts of menial tribes, such as sweepers, are so much dreaded that riots have followed an attempt to bury their dead in the usual way with the face turned to the sky. Sometimes the grave is enclosed by a fence too high for the ghost to 'take it,' particularly without a 'run.' Such an enclosure has the additional advantage of marking the place as tabu, and was the origin of the stone circles, erected round cairns, which subsequently developed into the artistic railings of Buddhist *stūpas*. Another common method is to deceive the spirit by carrying out the corpse feet foremost or by a special door, so that it may be unable to find its way back, by removing the house-ladder, or by forcing the bearers to carry their burden at

a trot and to change places on the road. Special precautions are taken not to name the dead, at least for some time after death, lest the soul may consider it an invitation to return.

4. Methods of disposal of the dead.—(a) *Cannibalism*.—Of that most archaic method of disposal of the dead, the funeral feast, 'when the meat is nothing less than the corpse of the departed kinsman' (Hartland, *LP* ii. 278), India has so far supplied no clear examples. There are, however, cases of eating the aged with a view to reproducing the virtues or powers of the departed, as among the Lushais of Assam, and the Chingpaws and Was of Upper Burma (Lewin, *Hill Tracts*, 107; *Gazetteer Upper Burma*, i. i. 436, 496). But this custom is confined to the most isolated and savage tribes, and the similar tradition recorded by Dalton (220 f.) of the Birhors of Chotā Nāgpur is probably quite baseless—possibly an echo of a story told of tribes much further east.

(b) *Dolmens and other stone monuments*.—The earliest form of corpse-disposal of which physical evidence exists is that in dolmens, kistvaens, and other forms of stone monuments, of which India furnishes numerous examples. Though sporadic remains of such structures have been found in many parts of N. India, the assertion of Fergusson (*Rude Stone Monuments*, 475 f.) may be accepted as generally correct, that they are peculiar to the country south of the Vindhyan Hills, and are numerous in the country drained by the Godāvari and its affluents, and in particular in the valley of the Kistna and its tributaries, on both sides of the Ghāts, through Coimbatore down to Cape Comorin, and especially in the neighbourhood of Conjeeveram. The most complete account of these stone monuments is that of Brecks, who describes them under three heads—cairns, or rather mounds enclosed by a stone circle; barrows; and kistvaens. In the cairns have been discovered earthen jars containing fragments of burnt bones, and some beautiful bronze vessels, probably imported from Babylonia or some other foreign country. Questions connected with the origin, purpose, and date of this series of monuments have given rise to much controversy. The fact that stone circles, of a form analogous to that of the ancient monuments, are used by the modern Todas has led to the inference that the members of this tribe are the successors of, or closely allied to, the old circle-builders. The character of the remains discovered does not, as a rule, suggest a date earlier than the Iron Age, which, if the analogy of Europe be accepted (though there are no materials for such a comparison), need not imply a date earlier than 850–600 B.C. But V. A. Smith (*IGI*, new ed., 1908, ii. 98) supposes that the Iron Age in N. India may go back to 1500 or even 2000 B.C. The difficulty of fixing an approximate date for these structures largely depends upon the fact that modern tribes, like the Kols and their kinsfolk in Chotā Nāgpur, as well as the Nāgas and Khāsīs of Assam, still erect stone monuments of a type closely resembling the pre-historic examples. The modern funeral monuments of the Khāsīs have been fully described by Gurdon (*The Khāsīs*, 144 ff.), who divides them into three classes—those intended as seats for the souls of the dead while their bones are being conveyed to the tribal ossuary; memorial stones erected in honour of deceased ancestors; and stones which mark tanks used for purifying the mourners from the death tabu. Many monuments in Madras and among the tribes of the E. frontier take the form of ossuaries, into which the bones are removed after disinterment.

(c) *Exposure to beasts and birds of prey*.—Among other modes of disposal of the dead the most crude is that of exposure of the remains to beasts and

birds of prey. This custom still prevails among the Tibetans and certain tribes of the N. frontier, where it probably originated from the difficulty of providing wood for cremation, or excavating graves during the severe winter of these regions. At a later period it was re-introduced from Persia by the Persis. Among the non-Aryan tribes of the Peninsula this method is occasionally employed for those dying in a state of tabu, as is the case with the Paharias of Bengal, the Nagas of Assam, and some menial tribes in the northern plains (Dalton, 274; *JAI* xi. 203; Rice, *Essays*, 60; Crooke, *TC* ii. 92, i. 7, iii. 144).

(d) *Cairn-burial*.—The idea of protecting the corpse from violation, and the desire to prevent the ghost from 'walking,' account for cairn-interment, which was used by the early tribes of S. India, and is found at the present time among the Bhils of Bombay (*BG* xii. 87), the Kachins of Upper Burma (*Gazetteer Upper Burma*, i. i. 393, 409), and some of the Assam tribes (Dalton, 9; Risley, *TC* ii. 112). From such cairns the *stūpas* of the Buddhists have been developed.

(e) *Cave-burial*.—Cave-burial, common in other regions of E. and S. Asia, does not seem to have prevailed widely in India. But it must be remembered that many caves have been occupied continuously even to the present day, and thus the evidence may have become obliterated, and numbers of them may still remain unexplored. In Malabar, however, sepulchral chambers excavated in the laterite and containing clay vessels and iron implements have been discovered; and in the same class are the *pāṇḍu-kulī*, the name of which is based on the absurd belief that they were the abodes of the Pāṇḍava heroes of the *Mahābhārata* (*JAI* xxv. 371 f.; Thurston, *Notes*, 148). See also the account of cave-burials in 'anterior India,' a region not capable of identification, by Nicolo Conti (*India in the xth Cent.*, ed. R. H. Major, Hakluyt Soc., 1857).

(f) *House-burial*.—Cave-burial naturally leads to house-burial, and the examples of this practice are abundant. More than one reason probably led to the adoption of the custom—the desire to retain the corpse in the house in the hope of its revival; the dread lest the relics might be used for purposes of black magic; or the hope that the soul of the ancestor thus buried might be re-incarnated in the person of some female member of the family. This last belief seems to be most general, and the custom, sometimes with this explanation, has been recorded among the Andamanese (*JAI* xii. 141, 144; Temple, *Census Report*, 1901, p. 65), the Nagas of Assam (*JAI* xxvi. 200), the Was and allied Burman tribes (Scott, *Burma*, 408), and some Madras and Panjāb tribes (Thurston, *Notes*, 155; *PNQ* i. 123).

(g) *Disposal in water*.—The custom of consigning the dead to water is more common. Among orthodox Hindus, the bones and ashes after cremation are deposited in a river or tank at some sacred place. Among the lower tribes, in most parts of the country, the corpse is often flung into the nearest river, sometimes after a perfunctory attempt at cremation by singeing the face and beard. It has been suggested that this method of disposal is in some cases based upon the desire to free the bones rapidly from the products of decomposition, and thus to placate the spirit; but more usually the intention is simply to get rid as quickly as possible of the corpse and the tabu which emanates from it. Hence it is frequently adopted in the case of those dying in a state of special tabu, as, for instance, those perishing from epidemic disease; and the bodies of *sannyāsīs* and other holy men are frequently consigned to running water. Sometimes, again, the rite is in the nature

of sympathetic magic, as when in Bengal those dying of leprosy, on the principle of water to water, are flung into the Ganges (*Asiat. Res.* iv. 69; Buchanan, *E. India*, i. 114).

(h) *Tree-burial*.—The practice of tree-burial in India seems to depend partly on the desire to placate the spirit by saving the remains from the attacks of wild animals, and partly on the fact that the tree is the haunt of spirits. It is found among the Andamanese, Nagas, and Māriyā Gonds (*JAI* xii. 144 f., xi. 205, xxvi. 199; Dalton, 43; *Census Report Assam*, 1891, i. 246; Hislop, *App. xiii.*). Among the Khāsis of Assam the corpse is placed in a hollow tree, and the next development is the use of a tree-trunk as a coffin, as among the Nagas and Karenis of Burma (Dalton, 56; *Gazetteer Upper Burma*, i. i. 528; *JAI* xxvi. 199).

(i) *Platform-burial*.—This rite further develops into the custom of platform-burial, which prevails among the Andamanese and some tribes on the E. frontier (*JAI* xii. 144; *Census Report Andamans*, 1901, 65; Lewin, *Hill Tracts*, 109). Among the E. tribes the custom of smoking the corpse is frequently combined with this.

(j) *Jar-burial*.—Jar-burial, in the sense that the corpse is deposited in an earthenware vessel, does not appear to prevail at present among the non-Aryan tribes; but instances of corpses placed in large mortuary jars have been discovered in prehistoric S. Indian interments (*JAI* xxv. 374); and some of these terra-cotta coffins closely resemble those found in Babylonia. At present, among most tribes which practise cremation, the ashes and bones are deposited in an earthen jar before burial or consignment to water.

(k) *Contracted burials*.—Besides the ordinary mode of burial in a recumbent posture, there are other methods which deserve special mention. First comes what is known as contracted burial, when the corpse is interred with the knees closely pressed against the breast. The tribal distribution of this practice does not throw much light upon its origin or significance. It is found among some of the more savage tribes, such as the Andamanese and the Pen tribe in Car Nicobar (*JAI* xii. 141, 144; *PNQ* iv. 66); and among the Lushais and Kukis of the E. frontier (Lewin, *Hill Tracts*, 109, *Wild Races*, 246). Among such people it has been suggested that it represents an attempt to prevent the ghost from 'walking'; and in some cases, among various races, the thumbs and toes of the dead are bound, apparently with this intention. Another theory is that it symbolizes the prenatal position of the child in its mother's womb. In some instances it may be due to the practical difficulty of digging a grave of the shape and size in which the body may rest in a recumbent posture; in others it may represent the position of a savage sleeping beside a camp fire. It has been adopted by some of the religious orders, like the *sannyāsīs* of N. India and the Shenvi Brāhmins and Lingāyats of the south. Here it probably represents the posture of the *guru* engaged in meditation, or lecturing to his pupils, because some of these sects place the bodies of their *gurus* in this posture after death, and worship them (*BG* xv. i. 140).

(l) *Shelf- or niche-burial*.—Shelf- or niche-burial, in which the corpse is deposited in a chamber or cavity excavated in the side of the perpendicular entrance to the grave, seems to be based on the intention of preventing the incumbent earth from resting upon the corpse and thus incommoding the spirit—a feeling which prevails among some wild tribes, like the Miris of Assam (Dalton, 34). It is found among some of the E. and S. tribes, like the Kaupūs of Manipur and the Paniyans of Malabar (*JAI* xvi. 355 f.; Thurston, *Notes*, 144); it has been adopted by some religious or semi-religious orders,

like the Jugs of Bengal, and the Rāvals or Lingāyats (Risley, *TC* i. 359; Crooke, *TC* iii. 19; *BG* xviii. i. 361); and it is the orthodox method among Muhammadans, who place the corpse in a niche (*lahd*) high enough to allow the spirit to rise when the dread angels, Munkar and Nakir, come to interrogate it regarding its belief in the Prophet and his religion.

(m) *Concealed burial*.—Concealed burial and the obliteration of all marks of the grave appear generally to be due to a desire to get rid of the spirit. It is found among the wilder tribes in Madras and Burma (Oppert, 199; Scott, *Burma*, 408).

5. *Disinterment of the remains*.—The practice of disinterment of the remains after decomposition has ceased probably rests upon the belief that the soul is immanent in the bones. The Andamanese and the Nicobarese disinter their dead, wash the bones, and, after wrapping them in cloth or leaves, re-bury them, or fling them into the jungle, or sink them in the sea (*JAI* xxxii. 209, 219 f., xii. 143, iv. 465, xi. 295 f.). Among the Khāsis of Assam those who die from infectious disease are buried, the remains being dug up and cremated when danger from infection is over (Gurdon, 137). This custom leads, among some tribes, to the provision of ossuaries in which the dry bones are stored. Such structures are found in E. and S. India (*JAI* v. 40, vii. 21 ff.). The same belief in the continued, though mysterious, oneness of the body with its severed parts leads to the formation of tribal cemeteries, to which, often from long distances, as among the Chinbons of Upper Burma and some tribes in the central hills, the bones of tribesmen are removed (*Gazetteer Upper Burma*, I. i. 467; Dalton, 34, 202).

6. *Immediate and deferred burial*.—In most cases climatic conditions necessitate the immediate disposal of the remains by cremation or burial. The custom of deferred burial, in which the remains are retained in the house to enable friends from a distance to pay their last tribute of respect to the dead, is less common, and is found chiefly among the E. tribes like the Khāsis, Nāgas, or Lushais (Gurdon, 138; *JAI* xxvi. 195; Lewin, *Hill Tracts*, 109).

7. *Embalming the dead*.—Customs of this kind naturally develop into the practice of embalming the dead, which is not common in India. In the form of preservation of the remains in honey or by smoking them over a slow fire, it is found only among some of the E. and Burmese tribes (Hooker, *Himalayan Journals*, ed. London, 1891, 486 f.; Shway Yoe [Scott], *The Burman*, ii. 330 f.).

8. *Inhumation and cremation*.—The methods of disposal of the dead which have been considered hitherto are all more or less abnormal. The modes now generally adopted are either simple burial in a recumbent position or cremation. We may, perhaps, in consideration of the Indian evidence, assume that the most primitive form was exposure of the corpse, followed by inhumation, and then by cremation. It has often been asserted that cremation was specially an Aryan practice; but the evidence from S. India monuments indicates that possibly it was only in the case of persons of rank that cremation prevailed (cf. art. *ARYAN RELIGION* in vol. ii. p. 16). At the same time, the facts at our disposal do not enable us definitely to decide why cremation displaced inhumation. Among the Aryans, as Ridgeway argues (*Early Age of Greece*, Cambridge, 1901, i. ch. vii.), the idea that fire was the only medium by which sacrifice could reach the gods may have led to the introduction of the process of cremation after the belief in an abode in the sky where the soul joined the *pitri*, or sainted dead, had become finally established; and, if it arose, as he argues

(ib. i. 539 f.), in a forest country, where the hut was consumed with the corpse to avoid tabu, there seems no reason why it may not have been independently discovered by the non-Aryan tribes.

At present it is only the most primitive non-Aryan tribes and some ascetic orders who still maintain the practice of earth-burial. On the other hand, many tribes in a low state of culture who now cremate their dead may have adopted the practice under Hindu influence. No literary evidence exists by which the historical development of these customs can be traced. The transition, however, between the two forms of disposal is in many instances clearly indicated. For example, among some tribes the ordinary dead are buried, while those under tabu are cremated; or the rich are cremated, while the poor are buried; or the question which mode is to be adopted depends upon the season of the year in which the death occurs. Among some tribes we find more than one method in use. One clan of the Nāgas combines platform-burial with cremation, placing the dead in open coffins raised several feet above ground, whence the remains are subsequently removed and burned close by (*JAI* xi. 213). The Kāmīs of Bengal burn, bury, or fling the corpse into water, as may be convenient at the time (Risley, i. 395). The Hābūras of the United Provinces either cremate or expose their dead in the jungle, as best suits their nomadic habits (Crooke, *TC* ii. 476). The widest variety of practice appears among the Nāgas, who bury, expose on a platform or in a tree, and sometimes cremate the corpse after placing it on a platform (*JAI* xi. 203, 213; Hodson, 146 ff.). After cremation the bones and ashes are usually deposited in a river or tank, the vessel while in process of removal to the sacred place being hung in a tree so that the spirit, when so disposed, may revisit the bones.

9. *The death-tabu*.—As among all races in the same grade of culture, the infective tabu arising from the corpse is specially dreaded. All who come in contact with the dead are considered to be infected. The corpse-bearers, for instance, as among the tribes of the central hill tract, have their shoulders rubbed with oil, milk, and cow-dung by the women of the mourning family, while they are sprinkled with cow's urine from twigs of the sacred Nim tree (*Melia azadirachta*). The dread of the death-tabu appears throughout the rites of mourning. Thus, among some tribes a special dress is provided for the chief mourners, the intention possibly being in some cases to disguise the mourner from the ghost. With the same object the Andamanese smear their heads with clay (Temple, *Census Report*, 1901, p. 65). As the tabu infects the house, no cooking can be done there, and the mourners either fast or receive supplies of food from relatives or friends. Persons, again, when exposed to the death-tabu, are not allowed to leave the house or village, lest they may infect the neighbourhood. This form of tabu is specially observed by the E. tribes, like the Nāgas of Assam and the hill races of Arakan (*JAI* xi. 71, xxvi. 191, ii. 240; Hodson, 173 f.). Tabu is also marked by the rule that mourners sleep on the ground: partly because, if beds are used during this period, they too become infected; partly because spirits cannot touch Mother Earth. The continence enforced upon mourners is probably, as in the case of the sacred dairymen of the Todas (Rivers, 100 f.), a precaution against the dissipation of physical energy, all of which is needed during this critical period. By an extension of the principles of tabu, if the death-rites have been, by a misconception, performed for a person who subsequently returns, he is tabu, because the powers of the other world seem to have

rejected him as unworthy. The period of tabu varies among the different tribes, and seems usually to depend on the time during which, before the completion of the funeral rites, the spirit is supposed to haunt the neighbourhood of the place of death or the grave.

10. Purification from the death-tabu.—Purification from tabu is effected in various ways. One method is that adopted by the Andamanese and Gonds, who quit the house of death or burn it, along with some or all of the effects of the dead man (*JAI* xii. 142; Hislop, 19). But generally there is a special rite of purification. This usually consists in ablution, by which the clinging spirit or tabu is washed from the body of the mourner. Sometimes special substances, usually the products of the sacred cow, are used for this purpose. With the same object many touch fire on their return from the funeral, or pass their feet, which naturally are supposed to be specially liable to infection, through the smoke of burning oil. In other cases the tabu is removed by transferring it, and, by a later conception, the sins of the dead man, to a scape-animal. In its clearest form the rite appears among the Badagas of Madras (Gover, *Folk-Songs of S. India*, London, 1872, p. 71; Thurston, *Notes*, 195 f.). Traces are also found of the remarkable custom of 'sin-eating,' by which the sins of the dead are transferred to a Brāhman who eats food in the house of death, or even, as used to be the habit at Tanjore, eats the bones of the dead Rāja ground up and mixed with rice (Dubois, *Manners and Customs*³, 1906, p. 366).

Lastly, the custom of shaving the mourner may be mentioned. The idea seems to be to get rid of the death-infection clinging to the hair, which, possibly with the same intention, is often let loose in mourning, as is the case with other persons under tabu, like the ascetic classes (*Madras Museum Bulletin*, iii. 251 f.). The hair is sometimes dedicated to the dead, as in the Deccan and along the lower Himalāya (*BG* xviii. i. 364, 149; *NINQ* iii. 117), the intention being to strengthen the feeble spirit of the deceased by dedicating that portion of the human organism which, by its growth, furnishes the strongest proof of vitality (Frazer, *GB*, pt. i. [1911], 'The Magic Art and the Evolution of Kings,' i. 31, 102). More usually the hair is shaven after the mourning period begins, or at its close. The shaving is usually confined to the immediate relatives or kinsmen; but in some cases the whole population shave their heads and beards on the death of a Rāja, e.g. in Kashmir and other parts of the Himalāya (*NINQ* iv. 18, 98; Drew, *Jummoo*, 54).

LITERATURE.—For pre-historic interments, see J. Fergusson, *Rude Stone Monuments*, 1872; R. B. Foote, *Catal. of the Prehist. Antig. Madras Museum*, 1901; J. Brecks, *Account of the Prim. Tribes and Monum. of the Nilagiris*, 1873. For Buddhist and early Hindu remains: A. Cunningham, *Archæol. Surv. Reports*, 1862-84, *The Bhilsa Topes*, 1854, *The Stupa of Bharhut*, 1879, *Mahābodhi*, 1892. For the South Indian tribes: E. Thurston, *Castes and Tribes of Southern India*, 1909, *Ethnogr. Notes in S. India*, 1906, *Madras Museum Bulletin*, passim, 1896-1909; G. Richter, *Manual of Coorg*, 1870; F. Buchanan, *Journey through the Countries of Mysore, Canara, and Malabar*, 1807; J. A. Dubois, *Description of the People of India*³, 1906; G. Oppert, *Original Inhabitants of India*, 1893; S. P. Rice, *Occasional Essays*, 1901; W. H. R. Rivers, *The Todas*, 1906. For the Eastern tribes: P. R. T. Gurdon, *The Khasis*, 1907; T. C. Hodson, *The Meithei*, 1903, *The Naga Tribes of Manipur*, 1911; A. Playfair, *The Garos*, 1909; E. Stack, *The Mikirs*, 1903; T. H. Lewin, *Hill Tracts of Chittagong*, 1869, *Wild Races of South-east India*, 1870; E. T. Dalton, *Descript. Ethnol. of Bengal*, 1872. For Andamanese and Nicobarese: Sir R. C. Temple, *Census Report*, 1901; E. H. Man, *JAI* xii. (1882), xiv. (1884). For northern plains: H. H. Risley, *Tribes and Castes of Bengal*, 1891; W. Crooke, *Tribes and Castes of the N.W. Provinces and Oudh*, 1896; *PNQ*, 1883-87, and *NINQ*, 1891-96, passim; F. Buchanan, *Eastern India*, ed. M. Martin, 1838. For Bombay and Central India: *BG*, passim; S. Hislop, *Papers relating to the Aboriginal Tribes of the Central Provinces*, 1866. For the northern hills: E. T. Atkinson, *Himalayan Gazetteer*, 1882-84, passim;

Scott (Shway Yoe), *Gazetteer Upper Burma*, 1900-1, passim, also *Burma as it was, as it is, and as it will be*, 1886, and *The Burman*, 1882; A. R. McMahon, *The Karens of the Golden Chersonese*, 1876.

W. CROOKE.

DEATH AND DISPOSAL OF THE DEAD (Jain).—The Jains agree, on the whole, with the Brāhmins in their notions on death. The soul of every living being—the highest gods included—must be re-born as long as it possesses *karma*, i.e. merit or demerit; but, when the *karma* has been annihilated, then the soul, on death, will enter on its innate state of purity, and will be released for ever from the cycle of births. But on some points the Jains have developed peculiar notions.

1. Re-incarnation and liberation of the soul.—According to the Jains, *karma*, the effect produced on the soul by its deeds during life, consists of extremely subtle matter, which pours or infiltrates into the soul when worldly actions make, as it were, an opening into it (*āsrava*). This *karma*-matter, as we may call it, fills the soul as sand fills a bag, and acts on it like a weight. The soul by itself has an upward gravity (*ūrdhvagurutva*), and is kept down, during its worldly state, by the *karma*-matter, which, like all matter, has a downward gravity (*adhogurutva*). Therefore, if cleansed of all *karma*, the soul, on leaving the body, will rise in a straight line to the top of the universe, where the liberated souls reside for ever (see above, p. 160^b, 'Jain cosmography')—just as a pumpkin coated with clay sinks to the bottom of a tank, but rises to the surface of the water when the clay has fallen off. But, if the soul is burdened with *karma*, it will, on leaving the body, move in any direction—upwards, sideways, or downwards. It does not travel in a straight line, but in a broken line, with one, two, or three angles or turns, and thus gets, in two, three, or four movements, to the place where it is to be re-incarnated. There it attracts gross matter, in order to build up a new body according to its *karma*.¹

2. Voluntary death or euthanasia.—It is a well-known fact that religious suicide is occasionally committed by the Hindus: under a vow to some deity they starve themselves to death, eat poison, drown themselves, enter fire, throw themselves down a precipice, etc. The Jains condemn such practices as an 'unwise death' (*bālamarana*), and recommend, instead, a 'wise death' (*pañḍita-marana*), as provided in their sacred books.

Two cases must be distinguished: religious suicide may be resorted to in case of an emergency, or it forms the end of a regular religious career; both cases apply to laymen as well as to monks.

(1) If a Jain contracts a mortal disease, or is otherwise in danger of certain death, he may have recourse to self-starvation. This practice is frequently mentioned in Jain narratives, and prevails, no doubt, even at the present day. If a monk is unable to follow the rules of his order, or cannot any longer sustain the prescribed austerities, he should rather commit suicide than break the rules. A particular case seems to be the following. When a monk falls sick, and foresees that he will not be able to go through the 'ultimate self-mortification' to be noticed hereafter, he may keep a long fast. If he gets well in the meantime, he is to return to his former life. But, if he should not recover, but die, it is all for the best. This conditional self-starvation is called *itvara*.²

(2) A pious layman may go through a regular course of religious life, the phases of which are the eleven 'standards' (*pratimā*); the first is to be observed for one month, the second for two months,

¹ Umāsvāti's *Tattvārthadhigama Sūtra*, ll. 22-23 (tr. ZDMG lx. [1905] 304 ff.)

² *SBE* xxii. 72, note 3.

and so on.¹ In the last standard, which he must observe for eleven months, he becomes practically a monk. At the end of this period he abstains from all food and devotes himself to 'self-mortification'² by the last emaciation,³ patiently awaiting his death, which will occur within a month.

In the case of a monk, the 'self-mortification' lasts twelve years, instead of twelve months. If a monk believes himself purified to such a degree that he may enter upon this last mortification of the flesh, then he should apply to his *guru*, or spiritual master, who will test him in various ways before he gives him his permission. Then, for a period of twelve years, the monk has to exert himself by every means to overcome all passions, worldly feelings, desires, etc., and to annihilate his *karma* by austerities—trying, however, to ward off a premature death. At the end of this period he should abstain from all food till his soul parts from the body. There are three different methods by which this end is brought about; they are called *bhaktapratyākhyānamarāṇa*, *ingitamarāṇa*, and *pādapopagamana*⁴—of which the last two are distinguished by the restriction of the movement of the person, and the motion of his limbs.

The rules for religious suicide form the subject of three canonical books—*Chausarāṇa*, *Aurapach-chakkhāṇa*, and *Bhattaparinna*.

LITERATURE.—This has been sufficiently indicated in the article.
H. JACOBI.

DEATH AND DISPOSAL OF THE DEAD

(Japanese).—I. GENERAL.⁴—The oldest traditions respecting burial speak of a *moya* ('hut'), in which the body of the deceased was kept, often for a very long time (e.g. that of Jimmu Tennō is said to have been kept for 19 months in the *moya*); of religious dances and music; of an eulogy or elegy (*shinubikotoba*) pronounced by the head of the family; and of a funeral feast or wake. They also tell of the practice of the self-immolation of wives, retainers, and servants at the grave of a husband or master. The advent of Buddhism in the 6th cent. A.D. brought in certain limitations and modifications. Cremation was introduced in A.D. 703; from that date to 1644 all the Emperors were cremated. Funeral regulations concerning, e.g., periods of mourning, etc., have existed since the 10th cent.; the self-immolation of retainers began to lose favour in the 14th cent., and was prohibited by Iyeyasu, though it still continued sporadically for some time. During the whole of the Tokugawa period only members of the Imperial House were buried with Shinto rites, and even the present forms of Shinto funerals date from the same period.

We will suppose the patient to have been given up by his medical attendant. Relatives and friends stand around his bed, watching his last struggles. Some of them moisten his lips with drops of water conveyed on a feather (*matsugo no mizu*, 'water of the last moment'), others gently rub his eyelids and lips with their hands, so that mouth and eyes may keep shut the more readily after death has taken place. In the province of Iyo, in Shikoku (a district in which there are many quaint survivals), efforts are sometimes made to retain the dying soul, especially when there still remains some communication to be made by or to the man at the point of death. Three men climb

to the roof of the house, sit astride on the roof-ridge, and cry aloud: 'Come back, So and So, come back once more.' Nobody inside the house is supposed to have heard the cry, but the dying man will revive for a little, and his spirit will linger for an hour or two before taking its final departure.

After death, the corpse, which is washed by all Buddhist sects, but not universally by the Shinto (some sects apparently being contented with rubbing with a wet cloth), is laid out, with its face covered with a piece of white cotton or silk, and placed on a mat in some suitable place, very often in front of the *toko-no-ma* ('alcove'), in the best sitting-room. The corpse lies with its head to the north (as did that of Buddha), either on its back (Buddhist) or facing the west. At its head is placed a mirror, and a sword for protection (the latter especially in the case of a *samurai*). Round the corpse is a screen. Outside the screen is an eight-legged table (Shinto) with offerings of washed rice, fresh water, salt, fish, and a *tamashiro*,¹ etc. In Buddhist houses there is no necessity for the table to have exactly eight legs, but the offerings are so placed that the deceased may be able to see them. On the Buddhist table stands an *ihai*, or tablet, inscribed with the posthumous name of the deceased, offerings of vegetable foods (*kumotsu*), and, in a vase, a single branch of *shikimi* (Chinese anise). The single branch or stem is so specially associated with funerals that on other occasions a Japanese housewife will not use a single branch for room-decoration.

Both in Shinto and in Buddhism a kind of fiction is kept up, during the days intervening between death and burial, that the spirit is still present with the body. Meals are brought at stated intervals, the corpse is sometimes rolled from side to side, under pretence of giving it ease in lying, and conversation is kept up with it as though it were still alive.

The corpse is dressed, in Shinto, in (1) a *tafusagi*, a kind of apron tied round the waist; (2) a *hadagi*, or shirt, reaching down to the knees; (3 and 4) a *shitagi* and an *uwagi*, a lower and an upper garment, corresponding to the *kami-shimo* (lit. 'upper and lower') of ancient Japanese dress; (5) an *obi*, or belt; and (6) *shitagutsu*, or shoes. A corpse is never dressed in ceremonial clothes or uniform. These are placed in the coffin later. In Buddhist houses the garments are very much the same, only that a distinction is made between winter and summer garments, which may be either of white cotton or of silk (a further development of the fiction of the continued presence of the spirit in the body). But the garments are put on inside out, with the seams showing, and they are worn *hidarima*, folded to the left, instead of to the right, as in life. At different parts of the garments are stitched the formulae *Namu Amida Butsu* ('Glory to Amida the Buddha'), or *Namu myō hō rengekyō* ('Glory to the Mystic Scripture of the Lotus of the True Law'), which are said to be

¹ The *tamashiro* is a wooden tablet, just like the Buddhist *ihai*, except that it contains the actual name of the deceased, and not the *kaimyō* ('posthumous name'). When the sick person is about to draw his last breath, the head of the family, or the person whose duty it will be to perform the funeral ceremonies (*mozu*), washes his hands, changes his clothes, places the tablet on a low table by the bedside, and then, taking it up again, carries it to the sickbed, and there respectfully writes on it the sick man's name. Then, addressing the dying man, he announces to him that the *tamashiro* has been prepared as a place of residence for his spirit: 'With all respect I address thee. Suffer thy excellent spirit to remain in this tablet, and accept the worship which will henceforth be perpetually offered before it by thy posterity in future ages.' Then, gently clapping his hands, he bows once and retires. The *tamashiro* is then put in a wooden box, or covered with a cloth, and placed, facing the south, on a low table in another room, where offerings are made before it. The Buddhist *ihai* (which is made in duplicate) cannot be prepared until after the priests have been called in to select a posthumous name for the deceased.

² Hoernle, *op. cit.* p. 47.

³ Prakrit *pāragamāṇa*, for which the correct Sanskrit is *prāyopagamāṇa* (see SBE xxii. 74 ff.).

⁴ The present writer is under great obligation to Dr. Ohrt, of the German Embassy in Tokyo, for permission to consult the MS of two lectures delivered before the Deutsche Gesellschaft für Natur- und Völkerkunde Ostasiens in Tokyo, during the winter of 1909-10.

potent protectors of the soul. In addition to the other garments, the Buddhists dress their corpses in straw sandals (*waraji*) and socks (*tabi*), the sandals being put on behind before. The corpse is also provided with a *dzudabukuro*, or bag, containing the *rokumonsen*, or six pieces of money required for the ferry across the Sandzunogawa, or Japanese Styx. Originally these were six pieces of actual money; at a later period six pieces of paper, cut and stamped in imitation of actual coins, were used; the present *rokumonsen* is simply a piece of paper with the representations of six coins stamped on it. The number of coins is not always the same—6, 12, 18, 49, according to circumstances; and the *dzudabukuro*, which is really an ascetic pilgrim's bag, contains all manner of things necessary for the long journey now commencing—the first lock of hair cut from the head of the deceased in infancy, bits of his beard, nail-parings, teeth, a rosary, 'letters of orders' (*kechi-myaku*), a tobacco-pouch, a comb, pins, needles, threads, a single change of garments, and a towel; but there must not be more than one of each of these things. When a husband dies, a wife cuts off her hair and puts it into the bag; when a father dies, the children cut their nails and put the parings into the bag.

In some houses, when a death occurs, a notice—*kichū* ('period of mourning')—is posted at the entrance as a notification to visitors. In one of the busiest thoroughfares of Tokyo the present writer recently observed an expansion of this idea. In addition to the *kichū* notification, there was a little white table standing in the street, with a white cloth over it, a bowl, and a flower-vase containing a single branch of *shikimi*.

One of the first things to be done after a death is the notification to the authorities. This is made, first of all, to the headman or mayor of the village or urban district, while in the case of the Shinto it is also made to the priest of the *ujigami* shrine (i.e. the shrine of the tutelary god of the village or family). Should that shrine be at an inconvenient distance from the deceased's residence, some other temple near by is selected. The Shinto clergy do not, however, have much to do with the arrangements for the funeral, although, as a matter of course, they have a voice in the selection of the day for the funeral obsequies.

In Buddhist funerals the priests play a larger part, and in former days their rôle was more important even than it is now. This may be seen in the fact that in some very ancient temples there may still be found a *yukamba* ('bath-room'), in which the ceremony of washing the dead (*yukan*) was carried on under their directions. (The washing ceremony takes place after midnight; a new wash-tub, pail, dipper, and towel are used, and, after the washing is over, all these utensils, together with any hair, nails, etc., taken from the body, are buried in some secluded spot.) The intervention of the priesthood is also necessary for the ceremonial shaving of the corpse, since shaving is the sign of ordination, and it is the theory of all Buddhist sects that the Buddhist layman passes at his death into the Order of Monks. When the shaving ceremony is over, the priests prepare a *kechi-myaku*, (lit. 'letters of orders,' i.e. 'certificate of ordination'), which, as we saw above, is placed in the *dzudabukuro* for use during the soul's pilgrimage in the realms of the dead.

The priests are also consulted about the selection of a day suitable for the funeral, and about the posthumous name to be given to the deceased. Government regulations and sanitary requirements interfere somewhat (not much) with the absolute freedom of choice of a propitious day, and attempts are made to get the funeral fixed for some time

within 24 hours after death. But these regulations are more frequently honoured in the breach than in the observance, and an interval of many days sometimes occurs. (The difficulty is occasionally got over by postponing the formal announcement of the death until all the necessary arrangements for the funeral have been made.) In addition to the ordinary cycle of the seven days of the week, there is another cycle of six days (generally to be found in the almanacs), according to which the propitious and unpropitious days are selected. The names of these six days are *senshō*, *tomobiki*, *sempu*, *butsumetsu*, *daian*, and *shakkō*;¹ a *tomobiki* day is never selected for a funeral. The posthumous name is always one with a religious meaning, and it is also so formed as to mark the sect to which the deceased belonged. Thus *yo* always appears in the posthumous name of a Jōdo believer, and *nichi* and *zen* in those of Nichiren and Zen believers respectively, but it is not always the case with the latter. Appended to the posthumous name is a designation of the deceased's status: *koji* ('landlord') and *daishi* ('landlady') for a gentleman and lady of high rank; *shinji* ('layman') and *shinnyo* ('laywoman') for ordinary men and women; *dōji* ('lad') for a boy; *dōnyo* ('lass') for a girl. The posthumous name is inscribed on the *ihai*, which is executed in duplicate, one being retained in the house, while the other goes to the funeral and is deposited in the temple. At the end of 100 days after death, lacquered *ihai* take the place of the plain wooden ones first used. In the same way, in Shinto rites, the *tamashiro* is at first placed in a 'temporary soul-receptacle' (*karimitamaya*); at the end of 50 days it is placed in a 'permanent soul-receptacle' (*mitamaya*). In some Buddhist families there is a large family *ihai*, on which the names of all the deceased members are inscribed, 100 days after death. It should be noticed that some Buddhist sects, e.g. the Shinshu, speak of two kinds of posthumous names: the *kaimyō*, given by the priests; and the *hōmyō*, given to the soul in Paradise by Amida himself—a kind of 'new name which no man knoweth saving he that receiveth it.'

Notice is now sent, by post-card or otherwise, to friends and relatives, announcing the decease. It is customary to pay visits of condolence, and to send presents to the house of the deceased. The nature and manner of presenting these gifts are fixed by custom, but it is very common at the present day to offer money in lieu of other gifts—a kindly tribute which is always very acceptable in view of the heavy expenses which a Japanese funeral entails.²

¹ The cycle of six days (see the talismanic tables in books on magic, e.g. Barrett's *Magus*, 1801) depends on the six elements common to Kabbala, Gnosticism, and Shingonism, which are symbolized by the term *Abarakia*, to which reference is made in this article. It is one of the many links connecting the Mahāyāna with the Judæo-Gnostic thought of the New Testament times.

The days are (i.) *Senshō*, 'first half good.' A *senshō* day is good for pressing and urgent business during the forenoon, but not after midday. By urgent business, lawsuits, petitions, etc., are meant. (ii.) *Tomobiki*, 'drawing friendship.' These days are good in the forenoon or evening, but not in the after-noon. There is no contest about anything. The day brings its own luck, and no amount of human striving will alter it. (iii.) *Sempu*, 'first half bad.' No urgent business should be undertaken on such a day. The afternoon is, however, lucky. (iv.) *Butsumetsu*, 'destruction of Buddha.' A sort of unlucky day. (v.) *Daian*, Friday. Nothing done on such a day will prosper. (vi.) *Shakkō*, Friday. Very lucky for anything, especially removals or journeys; cf. the old seaman's superstition about starting on a journey on Sunday. (vii.) *Sekko*, 'red mouth.' With the exception of the noontide hour, the whole of this day is unlucky. In the cheap Japanese calendars (*koyomi*) each day is marked according to this sixfold cycle.

² E. Schiller, 'Japan. Geschenkalisten,' in vol. viii. of the *Mitteil. der deutschen Gesellschaft für Natur- und Völkerkunde Ostasiens*; cf. also A. H. Lay, 'Funeral Customs of the Japanese,' in *T.A.S.J.*, vol. xix. pt. iii. The subject is a very large one, and beyond the limits of this article.

In due course the body is placed in the coffin. Coffins (*hitsugi* or *kwan*, the former distinctively Shintoist) are of two kinds—*nekwan* ('sleeping coffin') and *zakwan* ('sitting coffin'). In the latter the corpse is placed in a praying posture; in the former, in a recumbent one. At the bottom of the coffin is placed a piece of white cotton cloth, 4 hand-breadths wide, and 8 *shaku* (Jap. feet) in length; over this, a white *futon* and *fusuma* ('quilt' and 'coverlet'), and a pillow. Then the corpse is put in, together with any objects, e.g. an inkstand or photographs, prized by the deceased during life; and the whole is filled up with buckwheat husks to keep the body from moving. No metal object may be put into the coffin.¹ The interval between the encoffinement and the funeral is the most important period of the watching by the dead. It was a period of festivity in the old Shinto, but is now generally passed in silence: in the Buddhist *tsūya* ('wake') the silence is broken by the voices of the priests who are summoned on the last night to read Sūtras by the side of the deceased and for his benefit. This is known as *makuragyō*,² or 'pillow-Scripture,' and is accompanied by much burning of incense. Entertainments are provided for the guests. The lawfulness of the officiating priests partaking in these festivities is frequently discussed in Buddhist magazines. Very often the priest is provided with his meal apart from the laity, who do not begin until the clergy have finished; and an attempt is sometimes made to save appearances by drinking the *saké* out of tea-cups.

There are several strange old customs with regard to the choice of a location for the grave. Thus, in some of the remote mountain-villages in Tosa, while the corpse is still lying outstretched on the rush-mat, one of the near relatives kicks the pillow from under its head and carries it off to the cemetery. When he has selected the proper place for the grave, he puts down the pillow there, and, taking out four small coins, throws them east, north, west, and south. 'With these coins,' he says, 'I buy seven square feet of ground from the god of the earth.' Another old custom, still surviving in remote districts, is for a person not connected with the deceased by blood, and therefore free from death pollution, to sweep the ground selected for the grave, to spread a rush-mat on it, and on a table placed on the mat to erect a *himorogi* ('temporary tabernacle') for the earth-god. This is done by setting up *sakaki* branches with little paper pendants (*nusa*), etc., and by making offerings of rice, fish, vegetables, seaweed, and fruit. Then he offers the following prayer:

'I address the great god who is the lord of this locality. A new grave is here to be made for N. (name, office, rank). With an offering of wine, boiled rice, and *nusa*, I pray thee to grant that he may lie in this grave for ever, free from affliction and in peace. I speak with all respect and humility.'

Then he clasps his hands and bows twice. When the preparations for the funeral are all complete, the coffin is carried into a front chamber, and incense, lights, and a single flower are again offered before it. A set of *zen* is also provided. In this case, the *zen* consists of a bowl of unhulled boiled rice (*kurogome no meshi*), soup, raw *miso* ('bean-paste'), unrefined salt, and a pair of chopsticks, one of which is made of wood and the other of bamboo. Everything is now in readiness for the funeral ceremony. From this point sectarian differences become more marked, and it will be well to treat of Japanese funerals in detail according to the various sects.

¹ In certain Buddhist sects a pilgrim's staff and a doll are also put into the coffin (Ohrt).

² The Sūtra varies with the sect. In the Zen sect it is *Fuikyō* (Eka-Sūtra); in the Shingon, *Atsukyō* (Buddhi-Sūtra). These Sūtras, which do not exist in Sanskrit or Pāli, are said to have been preached by Śākyamuni shortly before his entry into Nirvāṇa. They are classified under the *Nehan-gyō* or Nirvāṇa Sūtras.

II. *SHINTO*.—A purely Shinto funeral is divided into five distinct portions: (a) *mitamautsushi*, or introduction of the spirit into the *tamashiro*; (b) *shukkwan*, or taking the coffin out of the house; (c) *sōsō*, or funeral procession; (d) *maisō*, or committal to earth; and (e) the subsequent purification. The actual ceremonies are conducted by the *moshu* ('chief mourner'), who is generally the heir, eldest son, or other near relative. Relatives in the ascending line are generally excluded. Recently, when H.I.H. Prince Arisugawa lost his son, the *moshu* was Prince Itō. The *moshu* is dressed in a dress of some dark colour, over which is worn a white *hitatare* ('surplice') and an *eboshi* ('mitre'). In the middle classes, however, the ordinary *haori* ('upper garment') and *hakama* ('nether garment') are frequently worn.

(a) The *mitamautsushi* takes place apparently as soon as the *tamashiro* is provided. The *moshu* (sometimes a *kannushi*, 'priest') sits down before the *tamashiro*, bows twice, claps his hands, and announces that the spirit (*tama*) of the deceased has taken up its abode in the *tamashiro*. This is known as the *zokuji*, and the following *norito* ('prayer' [Shinto]) is used (tr. by Ohrt):

'Alas! my (father), thou hast been taken away from us. I, N. N., and the rest of us that remain behind, will still continue to do thee faithful service in our hearts. Thy life has come to its close upon earth. Hear us in thy place of rest, as we celebrate thy obsequies. Deign, exalted spirit, to take up thy abode in this *tamashiro*, and remain at rest for ever in this thy house. I address thee with the deepest reverence.'

This *norito* is frequently repeated, as well as the invitation to the soul to participate in the feast. The *tamashiro* is then placed on the *kamidana*, or 'god-shelf,' used in Shinto houses.

(b) *Shukkwan*.—Before the bier is taken out of the house, offerings of boiled rice, *saké*, etc., are again made. Then the celebrant seats himself before the bier, bows, claps his hands, and, presenting a *tagamagushi*,¹ addresses the spirit with the following *norito*:

'This day, as the sun sets, we shall reverently celebrate thy obsequies. We pray thee to behold us in peace and without anxiety, as we start on our journey and pursue our way (to the cemetery). I speak with deep reverence and humility.'

Then he bows twice, claps his hands, and retires. All relatives present do the same. After this, four men, dressed in white, carry the coffin into the court-yard, where a fire is burning (on the theory of a midnight funeral), and the procession is formed in the following order: (1) coolies (or outriders); (2) coolies carrying torches or lanterns (still on the theory of the midnight funeral); (3) servant with a broom (relic of the old custom mentioned above); (4) white banner, 15 in. in width by 8 or 9 ft. in length, carried on a pole, and inscribed with the name and title of the deceased; (5) bearers with consecrated branches of the *sakaki* tree; (6) chest with offerings; (7) bearers with torches and lanterns; (8) the coffin (if a *zakwan*, it is carried in a *kago* ['litter']); if a *nekwan*, on a bier of white wood; it is carried on the shoulders of bearers in white surplices); (9) *bohyō*, a post, inscribed with the name, to be set up as a temporary mark for the grave; and (10) the chief and other mourners, on foot, as a general rule. Trestles (*koshidai*), a table for offerings, hangings, and a wooden pail and dipper also form part of the paraphernalia, but are now more generally found at the place of interment.

(c) The *sōsō no shiki* is generally celebrated within a curtained enclosure, though in Tokyo and other large places there are mortuary chapels to serve the purpose. The enclosure, or chapel, is invariably arranged in accordance with the annexed plan, the ritual observed in the chapel differing very slightly from that in the enclosure.

As the funeral procession arrives, the musicians take their seats and begin to play. During this

¹ i.e. a consecrated branch adorned with numerous pendants and streamers of paper.

time the bier is placed in its proper place, the flower-standards are arranged, and a high stand is erected, from which a pendant will later be suspended. When every one is seated, the celebrant, with his assistant, advances before the bier and bows. During this ceremony the music has ceased, but it begins again as soon as the priests return to their places.

The assistant now takes his place before the bier, but a little to the right of it. Acolytes bring a banner for the stand, and offerings to be placed on the table—*sake*, boiled rice, fresh fish, vegetables, seaweed, cakes, fruit, etc. Again the music ceases, while the chief celebrant advances once more, and, with his mace on his left hip, commences the repetition of certain prayers, which contain a recital of the dead man's birth, lineage, school-life, and career, official or otherwise, and conclude with words much to this effect:

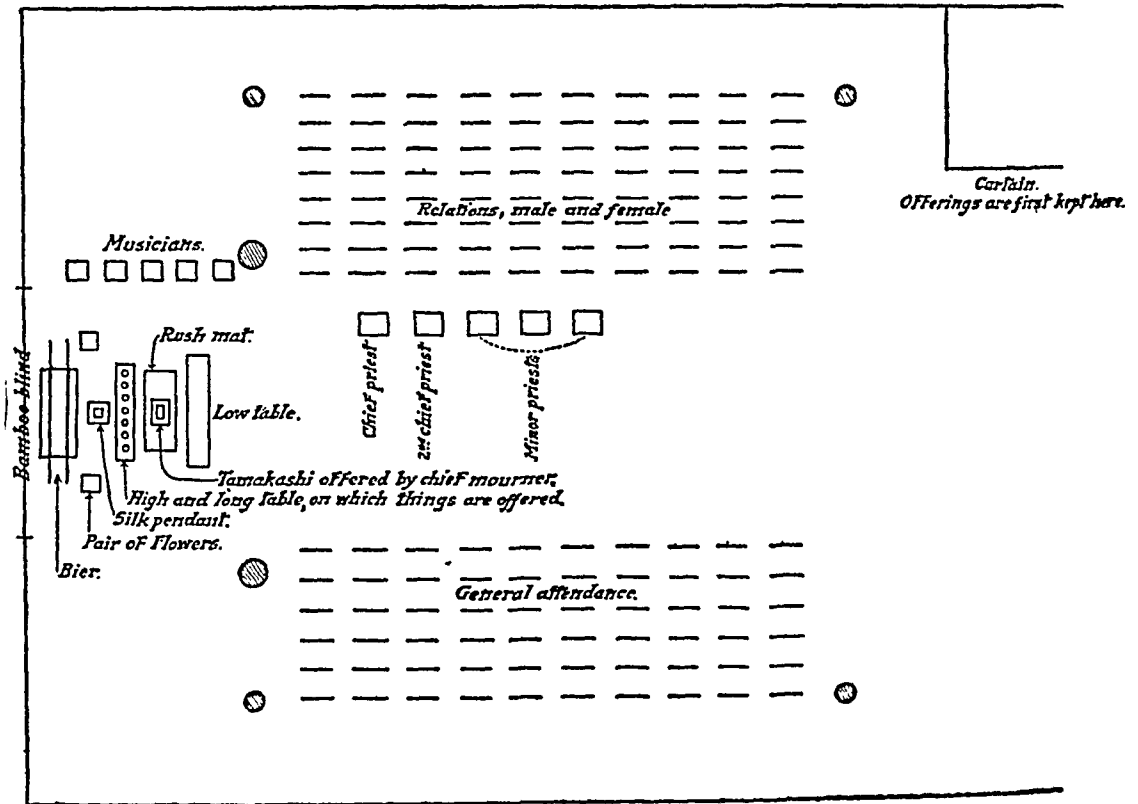

'Our honoured N. has passed away to our great regret; to our sorrow he has given up the ghost. The prayer of our inmost

lid. Then the grave is filled up, and on the new-made mound is planted the *bohyō*, a few lanterns, and banners. An open shed resting on four pillars is sometimes built over it, and generally it is surrounded with a *magaki* ('bamboo fence'), and a *shime* ('cordon') of rice-straw string.

The Shinto ritual does not contemplate cremation, but it is sometimes adopted. In that case the *maisō-no-kotoba* and the ritual that follows are used at the time of the interment of the ashes.

(c) The purificatory rites are of two kinds—of the house and of the mourners. The house is purified, immediately after the corpse has been taken out, by a Shinto priest, who comes in and waves a *tamagushi* in every direction, though sometimes the purification is accomplished by the priest's rinsing his mouth with water and throwing salt over his head.

The mourners are purified on their return from the funeral. (The return journey is always by a different road from that taken when going to

heart was that he might live to very great age, but it is the way of the fleeting world that he should come to this. Our prayer is that he will regard with tranquil eyes the obsequies we are now performing, and lie down to rest in his grave, leaving his spirit behind him to guard the house. Reverently and with humility I make this prayer.'

This prayer is known as the *maisō-no-kotoba* ('words of committal'). Everybody stands while it is being offered. When the music begins again, the chief mourner, habited in black with a white surplice, and wearing a black *eboshi* ('mitre') and straw sandals, comes forward and offers a branch of *sakaki* as a *tamagushi*. All the relatives and friends follow this example, the attendant priests having a large number in readiness for the needs of the visitors. Funeral orations are delivered, sometimes before and sometimes after the offering of the *tamagushi*.

(d) *Maisō*.—The coffin is now carried to the grave, and lowered into it, with few or no ceremonies. A few handfuls of earth are thrown upon it, and a *boshi*, 'plate,' inscribed with the name, age, rank, etc., of the deceased, is put on the coffin-

the funeral.) There are apparently three methods of purifying persons, viz. (1 and 2) the methods observed in purifying a house, and (3) a slightly more elaborate one. Offerings are placed before the *tamashiro*, and in front of them a branch of *sakaki*. The priest (or the *moshu*) recites the following *norito*:

'I thus address the spirit of (my father) who has now become a god. I prayed day and night that thou mightest live to be a hundred years old, and now I can but weep and lament that thou hast left this beautiful world, and gone to the dark land beyond. I beseech thee, listen in peace to us thy relatives assembled here, as we celebrate the worship of the dead with all manner of food.'

Then the offerings are removed.

The first fifty days after death are observed according to the Shinto rituals with daily offerings before the *tamashiro*. Special emphasis is laid on the 10th, 20th, 30th, etc. On the fiftieth day, the *tamashiro* is removed from its temporary shrine to the *mitamaya* or *kabyō* ('spirit-house'), and henceforth the worship of the spirit is performed along with that of the other ancestors. On this occasion,

the *saishi-no-kotoba* are used—prayers asking the spirit of the deceased to take up his abode in the *kabyō*, and beseeching the whole body of the ancestors to receive him into their company. Similar prayers are offered on the 100th day after death. On that day the temporary post should be removed from the grave, and a stone monument set up. The first anniversary is observed; after that, the anniversaries of the 3rd, 5th, 10th, 20th, 30th, 40th, 50th, and 100th years. After that, there is a commemoration every 100 years. The reader will understand that it is only in very exalted families that such minutiae can be attended to, but the Shinto funeral is in any case almost entirely confined to the highest classes.

III. *BUDDHIST*.—Something has already been said about customs observed in Buddhist houses in the care of the dead. The general procession is somewhat as follows (it is more striking to the eye by reason of the greater splendour of vestments, etc.): (1) bearers with natural flowers (*seikwa*); (2) bearers with artificial flowers (*tsukuri-bana*); (3) four (sometimes two) paper dragons on poles (*jatō*), these being evidently connected with the friendly Nāgas of Indian Buddhism; (4) banner (*meiki*), with the personal name of the deceased; (5) the officiant priest (*dōshi*), with his assistant (*mukaisō*); (6) white paper lanterns; (7) one *ihai* (the other is left at home); (8) incense (*kōro*); (9) the coffin on a bier, borne on men's shoulders, and with a few friends of the deceased walking beside it; and (10) the mourners (generally in *jinrikisha*). A bird-cage full of birds to be released at the grave-side, and a *sotoba* or *stūpa*, actually a post, notched near the top, and inscribed with Sanskrit characters, often form portions of the procession.¹

I. Ceremonies of the Zen.²—(1) *The service in the house*.—In this sect, the officiating priest is generally called the *indōshi*, because a large part of his duty is supposed to be to guide (*indō suru*) the soul of the deceased on its voyage through the realms of the dead. The *indōshi* begins by laying his *hossu* ('chowry,' a brush made of long white hair) on the lid of the coffin, as a sign of authority. Then he takes up the razor that has been used to shave the deceased. This is followed by the words:

Teijo shuhatsu Tōguan shujō Yōri bonnō Xugyō jakumetsu: 'The hair and beard have been shaved. I pray that all creatures may forsake evil passions for ever, and reach the goal of annihilation.'

This verse is sung three times, sometimes by the officiant alone, sometimes by the officiant and chorus. Next follows, sung or said in the same manner:

Ruten sangaichū Onnai funōdan Kion nyūmū Shinjitsu hōon sha: 'Whilst transmigrating through the Three Worlds, ties of kindness and affection cannot be cut off. He who has cut off this tie, and entered the realm of the unconditioned, is truly a grateful man.'

Now follows an exhortation to the deceased to confess his sins:

'Young man of good birth' [it will be remembered that the deceased is supposed to have received the tonsure], 'if thou wish to stand fast in the Refuges and to observe the commandments, thou shouldst first confess all thy sins. [There are two formulae of penitence; there is also the form of confession which has come from the former Buddhas and been handed down by successive patriarchs.] All thy sins will be pardoned. Recite these words after me.'

Then the priest recites the confession, with the sound of clappers (*kaishaku*) once at the end of

¹ The Sanskrit characters are *Kha la ka ra a*, representing the five *skandhas* ('forms of mundane consciousness'), and, as an alternative, the five elements which compose the universe. In Shingon, we have the pair of formulae *A-ba-ra-ta-kia* and *Kha-la-ka-ra-a*: in Irenæus, the Gnostic terms *Abrazas* and *Caulacau* (Irenæus says that *Caulacau* = 'mundus' [cf. vol. ii. p. 423, note]). See the present writer's *The Faith of Hail Japan*, London, 1911.

² We take the Zen first, not as being the oldest of the now existing sects, but as representing most specially the purely Indian side of Japanese Buddhism.

each line, and twice at the end of the stanza. The spirit of the deceased is supposed to join his recitation:

'All the evil *karma*, which I have accumulated in my previous existences which has had no beginning. It is the body, the tongue, and the mind. All this I confess.'

The priest continues:

'Thou hast confessed thy evil deeds of body, tongue, mind, and hast obtained the perfect purification. Therefore, thou must stand fast in the Three Refuges, in the Law, and the Order. The Three Treasures have a virtue, the threefold absolute virtue, the threefold virtue in Buddha's time, the threefold virtue as it is when there is no Buddha (*itai sambō, genzen sambō*). When thou hast taken refuge in them, thy shall be completed.'

Recitation of the ninefold Creed follows:

Namukie Butsu, 'Glory to Buddha in whom I take refuge.'
Namukie Hō, 'Glory to the Law in which I take refuge.'
Namukie Sō, 'Order eminent.'
Kie-butsu-mudō-son, 'I take refuge in Buddha, the eminent.'
Kie-hō-ri-jin-son, 'I take refuge in the Law, the undecaying.'
Kie-sō-wagō-son, 'I take refuge in the Order, the harmonious.'
Kie-buk-kyō, 'I have finished taking refuge in Buddha.'
Kie-hō-kyō, 'I have finished taking refuge in the Law.'
Kie-sō-kyō, 'I have finished taking refuge in the Order.'
[After each sentence the clapper "sounds" once; at the end it is sounded twice.]

The officiant goes on:

'After this wise have I now conferred on thee the Three Refuges. Henceforth, the Tathāgata (the Buddha), the True, the Perfectly-Enlightened is thy Teacher. Put no faith in the words of any heretical teachers, but have respect to the Benevolence, Deliverance, and Compassion that have vouchsafed thee. Now will I recite for thee the ten grave commandments. They are these:

1. *fusesshō*, "thou shalt not destroy life."
2. *fuchitō*, "thou shalt not steal."
3. *fujainā*, "thou shalt not commit fornication or adultery."
4. *sumōgo*, "thou shalt not lie."
5. *fukoshu*, "thou shalt not sell intoxicating liquors."
6. *fusckkwa*, "thou shalt not backbite."
7. *fujieankita*, "thou shalt not praise self at the expense of others."
8. *fukenhōzai*, "thou shalt not be grudging of the Law."
9. *fushin-i*, "thou shalt not be angry."
10. *fuhōsambō*, "thou shalt not speak evil of the Buddhas and Treasures."

These ten grave commandments have been formulated by previous Buddhas and handed down by successive Patriarchs. I have now entrusted them to thee. Keep them well in thy mind, and existences until thou attain to the Buddhahood. [This may be repeated at the discretion of the celebrant.] 8 beings that fulfil the Commandments of Buddha are all the same rank with Him. He that is in the same rank as the Perfectly Enlightened One is truly a Son of Buddha.'

[Wooden clappers twice, handbell thrice.]

The priests present now chant a stanza known as the *daihisshu*. When it is finished, a priest (the one who led the service before) takes up the words:

'After this wise has been sung the *daihisshu*. The souls arising therefrom are to be transferred to N. [here insert *kaimyō*], newly returned to the elements. We pray that we place his body in the coffin the Sambhoga land may be his.'

Then all together:

'All the Buddhas in the Ten Directions and in the Ten Worlds, all the Honourable Bodhisattvas and Mahāyāna Mahāprajñāpāramitā, the land of the Sambhoga Kāya.'

The same priest continues:

'If we meditate deeply on these things, lo! birth and death succeed each other as heat follows cold. They come like lightning flashing over the deep sky, their going is like the cessation of waves on the great sea. The newly born N. has this day suddenly come to the end of his life, by the exhaustion of all seeds of existence. He understands that all composite objects must be dissolved, and is content that the extinction (of the seeds of existence) is bliss. The congregation here assembled will respectfully recite the names of the saints. May the blessings resulting from their recitation serve to adorn the road leading to Nirvāṇa.'

Vairocana, the Buddha of the Holy Dharmakāya.
 Roṣaṇa, the Buddha of the Perfect Sambhogakāya.
 Śākyamuni, the Buddha, whose Nirmāṇakāya incarnations are hundreds upon hundreds of millions.
 Honourable Maitreya Buddha, for whose coming we wait.
 All Buddhas in the Ten Quarters and the Three Worlds.
 Mahāyāna-Saddharmapuṇḍarika Sūtra (personified).
 Mahāyāna Mañjuśrī Bodhisattva.

time the bier is placed in its proper place, the flower-standards are arranged, and a high stand is erected, from which a pendant will later be suspended. When every one is seated, the celebrant, with his assistant, advances before the bier and bows. During this ceremony the music has ceased, but it begins again as soon as the priests return to their places.

The assistant now takes his place before the bier, but a little to the right of it. Acolytes bring a banner for the stand, and offerings to be placed on the table—*saké*, boiled rice, fresh fish, vegetables, seaweed, cakes, fruit, etc. Again the music ceases, while the chief celebrant advances once more, and, with his mace on his left hip, commences the repetition of certain prayers, which contain a recital of the dead man's birth, lineage, school-life, and career, official or otherwise, and conclude with words much to this effect:

'Our honoured N. has passed away to our great regret; to our sorrow he has given up the ghost. The prayer of our inmost

lid. Then the grave is filled up, and on the new-made mound is planted the *bohyō*, a few lanterns, and banners. An open shed resting on four pillars is sometimes built over it, and generally it is surrounded with a *magaki* ('bamboo fence'), and a *shime* ('cordon') of rice-straw string.

The Shinto ritual does not contemplate cremation, but it is sometimes adopted. In that case the *maisō-no-kotoba* and the ritual that follows are used at the time of the interment of the ashes.

(c) The purificatory rites are of two kinds—of the house and of the mourners. The house is purified, immediately after the corpse has been taken out, by a Shinto priest, who comes in and waves a *tamagushi* in every direction, though sometimes the purification is accomplished by the priest's rinsing his mouth with water and throwing salt over his head.

The mourners are purified on their return from the funeral. (The return journey is always by a different road from that taken when going to

heart was that he might live to very great age, but it is the way of the fleeting world that he should come to this. Our prayer is that he will regard with tranquil eyes the obsequies we are now performing, and lie down to rest in his grave, leaving his spirit behind him to guard the house. Reverently and with humility I make this prayer.'

This prayer is known as the *maisō-no-kotoba* ('words of committal'). Everybody stands while it is being offered. When the music begins again, the chief mourner, habited in black with a white surplice, and wearing a black *eboshi* ('mitre') and straw sandals, comes forward and offers a branch of *sakaki* as a *tamagushi*. All the relatives and friends follow this example, the attendant priests having a large number in readiness for the needs of the visitors. Funeral orations are delivered, sometimes before and sometimes after the offering of the *tamagushi*.

(d) *Maisō*.—The coffin is now carried to the grave, and lowered into it, with few or no ceremonies. A few handfuls of earth are thrown upon it, and a *boshi*, 'plate,' inscribed with the name, age, rank, etc., of the deceased, is put on the coffin-

the funeral.) There are apparently three methods of purifying persons, viz. (1 and 2) the methods observed in purifying a house, and (3) a slightly more elaborate one. Offerings are placed before the *tamashiro*, and in front of them a branch of *sakaki*. The priest (or the *moshu*) recites the following *norito*:

'I thus address the spirit of (my father) who has now become a god. I prayed day and night that thou mightest live to be a hundred years old, and now I can but weep and lament that thou hast left this beautiful world, and gone to the dark land beyond. I beseech thee, listen in peace to us thy relatives assembled here, as we celebrate the worship of the dead with all manner of food.'

Then the offerings are removed.

The first fifty days after death are observed according to the Shinto rituals with daily offerings before the *tamashiro*. Special emphasis is laid on the 10th, 20th, 30th, etc. On the fiftieth day, the *tamashiro* is removed from its temporary shrine to the *mitamaya* or *kahyō* ('spirit-house'), and henceforth the worship of the spirit is performed along with that of the other ancestors. On this occasion,

the *saishi-no-kotoba* are used—prayers asking the spirit of the deceased to take up his abode in the *kabyō*, and beseeching the whole body of the ancestors to receive him into their company. Similar prayers are offered on the 100th day after death. On that day the temporary post should be removed from the grave, and a stone monument set up. The first anniversary is observed; after that, the anniversaries of the 3rd, 5th, 10th, 20th, 30th, 40th, 50th, and 100th years. After that, there is a commemoration every 100 years. The reader will understand that it is only in very exalted families that such minutiae can be attended to, but the Shinto funeral is in any case almost entirely confined to the highest classes.

III. **BUDDHIST.**—Something has already been said about customs observed in Buddhist houses in the care of the dead. The general procession is somewhat as follows (it is more striking to the eye by reason of the greater splendour of vestments, etc.): (1) bearers with natural flowers (*seikwa*); (2) bearers with artificial flowers (*tsukuri-bana*); (3) four (sometimes two) paper dragons on poles (*jatō*), these being evidently connected with the friendly Nāgas of Indian Buddhism; (4) banner (*meiki*), with the personal name of the deceased; (5) the officiant priest (*dōshi*), with his assistant (*mukaisō*); (6) white paper lanterns; (7) one *ihai* (the other is left at home); (8) incense (*kōro*); (9) the coffin on a bier, borne on men's shoulders, and with a few friends of the deceased walking beside it; and (10) the mourners (generally in *jinrikisha*). A bird-cage full of birds to be released at the grave-side, and a *sotoba* or *stūpa*, actually a post, notched near the top, and inscribed with Sanskrit characters, often form portions of the procession.¹

I. **Ceremonies of the Zen.**²—(1) *The service in the house.*—In this sect, the officiating priest is generally called the *indōshi*, because a large part of his duty is supposed to be to guide (*indō suru*) the soul of the deceased on its voyage through the realms of the dead. The *indōshi* begins by laying his *hossu* ('chowry,' a brush made of long white hair) on the lid of the coffin, as a sign of authority. Then he takes up the razor that has been used to shave the deceased. This is followed by the words:

Teijo shuhatsu Tōgwan shujō Yōri bonnō Xugyō jakumetsu:
'The hair and beard have been shaved. I pray that all creatures may forsake evil passions for ever, and reach the goal of annihilation.'

This verse is sung three times, sometimes by the officiant alone, sometimes by the officiant and chorus. Next follows, sung or said in the same manner:

Ruten sangaichū Onnai funōdan Kion nyūmū Shinjitsu hōon sha: 'Whilst transmigrating through the Three Worlds, ties of kindness and affection cannot be cut off. He who has cut off this tie, and entered the realm of the unconditioned, is truly a grateful man.'

Now follows an exhortation to the deceased to confess his sins:

'Young man of good birth' [it will be remembered that the deceased is supposed to have received the tonsure], 'if thou wish to stand fast in the Refuges and to observe the commandments, thou shouldst first confess all thy sins. (There are two formulae of penitence; there is also the form of confession which has come from the former Buddhas and been handed down by successive patriarchs.) All thy sins will be pardoned. Recite these words after me.'

Then the priest recites the confession, with the sound of clappers (*kaishaku*) once at the end of

¹ The Sanskrit characters are *Kha la ka ra a*, representing the five *skandhas* ('forms of mundane consciousness'), and, as an alternative, the five elements which compose the universe. In Shingon, we have the pair of formulae *A-ba-ra-ka-kia* and *Kha-la-ka-ra-a*: in Irenaus, the Gnostic terms *Abrazas* and *Caulacau* (Irenaus says that *Caulacau* = 'mundus' [cf. vol. ii. p. 428, note]). See the present writer's *The Faith of Half Japan*, London, 1911.

² We take the Zen first, not as being the oldest of the now existing sects, but as representing most specially the purely Indian side of Japanese Buddhism.

each line, and twice at the end of the stanza. The spirit of the deceased is supposed to join him in his recitation:

'All the evil *karma*, which I have accumulated in the past, has had its origin in desire, hatred, or ignorance, in a series of previous existences which has had no beginning. It is due to the body, the tongue, and the mind. All this I confess.'

The priest continues:

'Thou hast confessed thy evil deeds of body, tongue, and mind, and hast obtained the perfect purification. Now, therefore, thou must stand fast in the Three Refuges, in Buddha, the Law, and the Order. The Three Treasures have a threefold virtue, the threefold absolute virtue, the threefold virtue as it was in Buddha's time, the threefold virtue as it is in a time when there is no Buddha (*ittai sambō, genzen sambō, fuji sambō*). When thou hast taken refuge in them, thy virtues shall be completed.'

Recitation of the ninefold Creed follows:

Namukie Butsu, 'Glory to Buddha in whom I take refuge.'
Namukie Hō, 'Glory to the Law in which I take refuge.'
Namukie Sō, 'Order'
Kie-butsu-mudō-ton, 'I take refuge in Buddha, the super-eminent.'
Kie-hō-ri-jin-son, 'I take refuge in the Law, the undefiled.'
Kie-sō-wagō-son, " " " the Order, the harmonious.'
Kie-buk-kyō, 'I have finished taking refuge in Buddha.'
Kie-hō-kyō, " " " the Law.'
Kie-sō-kyō, " " " the Order.'

[After each sentence the clapper sounds once; at the end it is sounded twice.]

The officiant goes on:

'After this wise have I now conferred on thee the Refuges. Henceforth, the Tathāgata (the Buddha), the Truest, the Perfectly-Enlightened is thy Teacher. Put no faith in the Tempter, nor in any heretical teachers, but have respect to the great Benevolence, Deliverance, and Compassion that have been vouchsafed thee. Now will I recite for thee the ten grave commandments. They are these:

1. *fusesshō*, "thou shalt not destroy life."
2. *fuchūtō*, "steal."
3. *fujainā*, "commit fornication or adultery."
4. *sumōgo*, "lie."
5. *fukoshu*, "sell intoxicating liquors."
6. *fusekkwa*, "backbite."
7. *fujisankita*, "praise self at the expense of others."
8. *fukenhōzai*, "be grudging of the gifts of the Law."
9. *fushin-i*, "be angry."
10. *fuhōsambō*, "speak evil of the Three Treasures."

These ten grave commandments have been formulated by previous Buddhas and handed down by successive Patriarchs. I have now entrusted them to thee. Keep them well in all thy existences until thou attain to the Buddhahood. [This formula may be repeated at the discretion of the celebrant.] Sentient beings that fulfil the Commandments of Buddha are placed in the same rank with Him. He that is in the same rank as the Perfectly Enlightened One is truly a Son of Buddha.'

[Wooden clappers twice, handbell thrice.]

The priests present now chant a stanza known as the *daihishu*. When it is finished, a priest (not the one who led the service before) takes up his word:

'After this wise has been sung the *daihishu*. The merits arising therefrom are to be transferred to N. [here insert the *kaimyō*], newly returned to the elements. We pray that when we place his body in the coffin the Sambhoga land may receive him.'

Then all together:

'All the Buddhas in the Ten Directions and in the Three Worlds, all the Honourable Bodhisattvas and Mahāsattvas, and Mahāprajñāpāramitā, the land of the Sambhoga Kāya.'

The same priest continues:

'If we meditate deeply on these things, lo! birth and death succeed each other as heat follows cold. They come like the lightning flashing over the deep sky, their going is like the cessation of waves on the great sea. The newly deceased N. has this day suddenly come to the end of his life, by reason of the exhaustion of all seeds of existence. He understands that all composite objects must be dissolved, and is convinced that the extinction (of the seeds of existence) is bliss. The holy congregation here assembled will respectfully recite the names of the saints. May the blessings resulting from that recitation serve to adorn the road leading to Nirvāṇa.'

Vairocana, the Buddha of the Holy Dharmakāya.
Rochana, the Buddha of the Perfect Sambhogakāya.
Sākyamuni, the Buddha, whose Nirmāṇakāya incarnations are hundreds upon hundreds of millions.
Honourable Maitreya Buddha, for whose coming we wait.
All Buddhas in the Ten Quarters and the Three Worlds.
Mahāyāna-Saddharmapūṇḍarika Sūtra (personified).
Mahāyāna Mañjuśrī Bodhisattva.

Mahāvāna Samantabhadra Bodhisattva.
 Mahākārupika Avalokiteśvara Bodhisattva.
 Honourable Bodhisattvas and Mahāsattvas.
 Mahāprajñāpāramitā.

[Here follows the *shariraimon*, or stanza for worshipping the relics of Buddha.]

One priest alone:

'After this wise the Names of the Holy Ones have been recited, and the Sūtra has been chanted. The merits arising therefrom will be transferred to the newly-deceased N. to adorn the Sambhoga land, with the prayer that the soul may travel beyond the consecrated border (of personified existence), that its *karma* may be exhausted, that a superior lotus flower may open for it, and that the Buddha may give it a prediction for life. Once more the Holy Assemblage is invited to chant.'

All present:

'All the Buddhas in the Ten Quarters and the Three Worlds, all the Bodhisattvas, Mahāsattvas, and Mahāprajñāpāramitā.'

Then the *indōshi*:

'We are now about to lift the sacred coffin, and to celebrate imposing obsequies. The assembly is implored to recite the great names of saints, and to assist the soul of the deceased along the road to Nirvāna.'

This ends the *makuragyō*, or service in the house. The procession is now formed outside, and, when the coffin has been put on the bier, a start is made for the temple or graveyard.

(2) *The services in the temple.*—Whilst the procession, professedly modelled on the funeral of Siddhodana (the father of the Buddha), is making its way to the temple, certain preparations have been made for its reception. The temple-bell has been set tolling, and goes on until the cortège reaches the front gates. In the court-yard four small *torii* ('gates') of wood have been erected facing E., S., W., and N. On each is suspended a tablet with an inscription: (1) *Hosshimmon*, the gate of religious awakening; (2) *Shugyōmon*, the gate of religious practices; (3) *Bodaimon*, the gate of Bodhi; and (4) *Nehammon*, the gate of Nirvāna. They are symbolical of the various ways that lead to Eternal Life, and the coffin is carried three times round to them all to show that, in the opinion of the Zen, all four are necessary. The ceremony may be held either in the main hall of the temple or in an open court-yard.

While the procession is making its round of the four *torii*, some of the priests slip into the temple or hall, and begin the recital of certain *dhāraṇī* ('secret formulæ'). These are supposed to be very efficacious, even by the Zen sect, which originated in a protest against the magic formulæ that were so rife in the China of the 6th cent. A.D. Gradually the assembly take their seats; when all are seated and the music and chanting have come to an end, the *indōshi* recites the *indō*, or 'guiding words,' for the benefit of the soul of the deceased. Then another priest says:

'This day the newly-deceased N., having exhausted all the causes of life (Skr. *pratyaya*), has entered Nirvāna, and is now to be buried according to the Law. His phenomenal body, the body that endures for a hundred years, will be buried; the real Self will be sent to tread the lone path that leads to Nirvāna. The holy assembly (of monks) is therefore prayed to assist the soul that is being enlightened, and to recite.'

Here all the priests present take up their cue and recite:

'*Vairochana*, the Buddha of the Holy Dharmakāya,' etc., as above.

The priest resumes:

'After this wise have the holy Names been praised, and the soul that is being enlightened has been helped. Let us pray that the mirror of Wisdom may shed its brightness on him, that the wind of Truth may waft on him its splendours. In the garden of Bodhi ('infinite knowledge') may the flowers of Enlightenment and Wisdom bloom, and on the sea of reality may the waves roll free from every stain. We offer three cups of tea, we offer incense to accompany him along the solitary, clouded path, and we worship the assemblage of the saints.'

Here the congregation recites the *Ryōgonshū*; then the priest alone:

'After this wise have the names of the Holy Ones been chanted and the Sūtra been recited. The merits accruing from this act of worship are to be transferred (*ekō*) to the newly-deceased N., at the time of his interment, to adorn the Sambhoga land.'

Chorus of attendant priests:

'All the Buddhas in the Ten Quarters,' etc., as above.

Small bells, drums, and cymbals are beaten in chorus three times, and the coffin is taken away for cremation or [and] interment.

No special ceremonies are observed in cremation. When the body (or the ashes, as the case may be) comes to the place of interment, it is lowered into its grave by the nearest kinsman. All the banners are placed on the coffin-lid, and the relatives each take a handful or spadeful of earth, which they throw into the grave. The grave is then filled up.

2. *Ceremonies of the Shingon.*—We now come to a sect whose ceremonies it is most difficult to describe, for the reason that a great deal is done by dumb show, the so-called *mudrā*, 'signs of the hand,' being matters of prime importance in these ceremonies. Great stress also is laid on the recital of mystic formulæ in debased Sanskrit, which it is not always easy to understand. Some of these formulæ are secret, and may not be revealed to the general public. [For all these the student is referred to vol. viii. of the *Annales du Musée Guimet*.] The Shingon sect is in many ways the most interesting of all the Buddhist sects in Japan; for not only has it been the great inspirer of Japanese art, but it has certain most striking resemblances both to Alexandrian Gnosticism and to the Jewish Kabbala. These will be duly pointed out as they occur.

(1) *Ceremonies in the house.*¹—A temporary place of worship having been arranged, when the service is about to commence, the officiant, also called *indōshi*, goes before the coffin with the long-handled incense-burner in his hand, and makes a bow. Then he takes his seat on the *raiban* ('exalted seat of worship'), rubs his hands with *dukō* ('liquid incense'), and spends some moments in meditation, the subjects of which are supposed to be the 'three secrets' (i.e. the secret *dhāraṇī*, the secret *manual acts*, and the secret *teachings* which have been committed to him); the 'way of purifying the three deeds,' i.e. of body, mouth, and heart; the 'three sections,' i.e. the world of Buddhas, the world of the Lotus, and the Diamond World; and the 'putting on of spiritual armour.' All these meditations are exhibited by the corresponding formulæ and manual acts. This section is closed by a meditation on the scented water, which is called the *kajikōsui*,² 'scented water signifying the acceptance by the believer of the great mercy of the Tathāgata projected over the hearts of his creatures' (so explained in *Sokushinjōbutsugi*). This produces an effectual union of the worshipper's heart with that of the Buddha.

The celebrant now proceeds to the invocation of the Buddhas. Commencing with a manual act ('diamond-joining-hands'), which signifies the raising of the thoughts towards *bodhi*, accompanied by a *dhāraṇī* of the same import, he proceeds by a series of gestures and formulæ, which it is not necessary to give here, to invoke the Universe³ and the Atoms.⁴ From the invocation of

¹ The Shingon house-ceremonies are performed before a small temporary altar, on which stand the images of the thirteen Buddhas and Bodhisattvas, supposed to take charge of the soul of the dead for several years after death. These thirteen Buddhas, who are clearly not particularly connected with primitive Buddhism, appear to correspond with the *Æons* of the thirteen realms of the dead, through which, e.g., in the book *Pistis Sophia*, the Gnostics supposed the souls of the dead to pass in Hades. The thirteen Buddhas are not peculiar to the Shingon, though this sect lays more stress on them than does any of the others. See note on the subject in the present writer's *Shinran and his Work* (Tokyo, 1910), Appendix III., and also *The Faith of Half Japan*.

² The *kajikōsui* is also used in the *abhiṣeka*, or baptismal rites (Jap. *kirijō*), of both Shingon and Tendai. It corresponds to the *opobalsanum* mentioned by Irenæus as used in the baptisms of the Marcsonian heretics.

³ The *dhāraṇī* is *Om-sammayā satoban*, a debased Sanskrit which we have not been able to understand. The manual act is called a meditation on Samantabhadra.

⁴ Here the *dhāraṇī* refers to the five exterior elements; it is *Om Abiraunkan*, 'earth, water, fire, wind, void.' This name

the Universe impersonal he passes to that of the Universe personal, to the Five Buddhas,¹ to Amitābha, the giver of immortality,² and to Amitābha with his attendants Avalokiteśvara and Mahāsthāmaprāpta, that they will come to the funeral ceremony and invite the deceased to enter the bliss of Paradise. After each of these invocations, the *kōmyōshingon*,³ or invocation of the Five Dhyāni-buddhas, is chanted three times. Then, coming lower in the scale of dignity, we have the invocation of Kṣitigarbha, the sixfold protecting angel of the dead (*Roku Jizō*), and that of *Fudō-myō-ō* (*Achāravidyārāja*) and the other great *vidyārājas*—Mahātejas, Vajrayakṣa, Kundali, and Tribhava-vijaya. The *mantra* of Kṣitigarbha is *Kakakabi samaye abiraunken sowaka*; that of *Fudō-myō-ō*, which is chanted three times, is *Nōmaku sāmānda bāsarada sendam mākara shātei sowataya untaratā kamman*. (The meaning of these Sanskrit formulæ is now wholly lost.)

We now get three *mudrās*, representing the 'preaching' of Vairocana of the three *kāyas*—the Dharmakāya (*Namu A*), the Sambhogakāya (*Namu Vam*), and the Nirmānakāya (*Namu Ūn*). The three syllables *A-vam-un* (possibly Skr. *om* = *a+u+m*) represent the 'Trinity' of Vairocana. Then the *stūpa* is figuratively opened and shut—an evident allusion to the Saddharmapundarika Sūtra; next, a *mudrā* (or manual gesture) figuring the *abhiṣeka* of *Fudō-myō-ō* (see above), with *Namu bam* repeated thrice; next, three representing respectively the Dharmakāya, Sambhogakāya, and Nirmānakāya (possibly of *Fudō-myō-ō*), with *mantras* respectively—*Anbanrankan ken, Abiraunken, and Arahashanō*. But *Fudō*, like Kṣitigarbha, is sixfold in his operations in the six spheres of sentient existence, and we consequently have a suitable gesture, imparted to Kōbō Daishi by his Chinese tutor Keikwa, for which the *mantra* is *Abiraunken*, together with a secret formula which may not be written down, but which may be attained by means of a proper 'meditation on the Fire.'

Thus, the whole celestial hierarchy of the Shingon having been invoked, it remains only to procure for the deceased, on whose behalf all these celestials have been summoned, a suitable understanding of what it all means. This is effected by means of four more sets of manual acts and *mantras*, signifying respectively the attainment of the perfect knowledge of *rūpadharma* ('objects having form'), of *chittadharmā* ('objects conceivable, but without form'), of *rūpadharma* and *chittadharmā* together, which are not two, but one; and, finally, a meditation on the *dharma-dhātu* ('universe'), for which the *dhāraṇī* is *Om Maitreya Svāhā*. [The Shingon are firm believers in Maitreya, more so than any other of the Buddhist sects. It is their conviction that the body of Kōbō Daishi, which never decays, is awaiting the advent of Maitreya in his tomb at Kōya San, and Shingonists often send the bones of their dead, after cremation, to Kōya San, so as to be near to Kōbō at the resurrection, which will take place when Maitreya makes his appearance.]

The officiant now prostrates himself three times appears often as *Ambamramkakau* and as *A-ba-ra-ka-kia*. It is almost certainly the Gnostic *Abrazas*—a conclusion in which we are strengthened by the fact that the Gnostic *Caulaceu* also seems to appear in the *mudrā*. See above, p. 489, n. 1.

¹ In this place the five Dhyāni-buddhas are Amogha, Vairocana, Mahāmudra, Mañipadma, and Jālapravarta—a very unusual enumeration. The more usual one is given below. We believe these to represent the five Dhyāni-buddhas of the *Fajradhātu* ('Diamond World,' i.e. world of ideas), the others the corresponding set of the *Garbhadhātu* ('Womb World,' i.e. world of birth, death, concrete existence).

² The Shingon form of Amitābha is Amjitābha.

³ In *Shinran* and his *Work* the present writer has shown that the word *kōmyō* seems always to have Manichæan associations and connexions. It is quite possible that this *mantra* may have them too.

before the assembled deities, offers incense, strikes the bell three times, and recites a sort of creed:

'With deep respect for all the Buddhas here assembled, I take my refuge in Buddha. May all creatures follow my example! I take my refuge in Dharma. May all creatures follow my example! I take my refuge in the Saṅgha. May all creatures follow my example! The excellent physical body of the Tathāgata is without a parallel. The form of the Tathāgata is inexhaustible, and all the *dharma*s (Jap. *isharō* = 'all matter') are permanent. With deepest reverence I address the great Vairocana, the Tathāgata, the Master of Shingon Buddhism, and all the venerable ones and saints of the two assemblies (i.e. the Vajradhātu and Garbhadhātu); and especially Amitābha, the master and teacher of the Land of Bliss, the Merciful Maitreya, for whose coming we wait; the holy Hanjō Kōngō (i.e. Kōbō Daishi), who sits cross-legged in deep meditation; all the great Achāryas, the transmitters of religious light in the three countries (India, China, Japan), and also in all the lands illumined by the eye of Buddha, and pitied by the Three Gems.

If we meditate deeply thereon, the moonlight of "Opportunity—which-is-born-when-the-desire-thereof-ariseth" (*Kūrai ki okoreba sunawachi shōzu*) shines in the sky of the tranquil spiritual Nature. The colour of the flower of "The-Cause-that-being-exhausted-presently-disappeareth" blooms in the Garden of unbounded Adornment.

Appearance is as non-appearance.

Disappearance is as non-disappearance.

Both appearance and disappearance are unattainable.

They cannot be named.

The deceased N., his causes of life having been exhausted, has gone to another world. He has left his body in Jambudvīpa,¹ and has entered the intermediate state (Skr. *antara-bhava*, Jap. *chū-yū*). Therefore now, in accordance with the testament of the Śākyan king, who was endowed with the ten merits (*jūzen*), we will with tears celebrate the ceremonies of funeral-rites and cremation. Having adorned the Sacred Altar upon which the Tathāgata will descend in answer to our prayers, we will pray for the favourable acceptance of his soul by the Venerable Ones, and for its deliverance. We will kindle the pure fire, which passes through all the six elements (*rokudai mu-e*), and so cremate the body which from the beginning has had no true phenomenal appearance (*konrai fushō*). We pray that all the Buddhas may certify for him, that all the Saints may pray for him, and that they may receive him to a lotus-stand of superior dignity. May the living and lawful king of reason and wisdom (Vairocana [?] Amitābha [?]) endow him with the highest Buddhahood! . . . And may all sentient beings in the Dharmadhātu be equally benefited! . . . I speak this with all respect.'

This ends that portion of the service which is known as *hyōhaku*, 'the expression of belief.' Next follows the singing or chanting of the *Jimbun shingyō*, i.e. the Mahāprajñāpāramitāhṛdaya Sūtra, for the purpose of giving pleasure to the assembled spirits, in order that they may make their appearance upon the altar. After this a priest says:

'In the yard where funeral services are being conducted (for a deceased person), it is generally the case that his sins all perish, and that his merits rise heavenwards. This is the time of his ascension to the land of Bliss, and we may consequently expect that Yama the lawful king, and the five infernal officers of the other realms of existence, will make their appearance. We pray, therefore, to the thirteen great Buddhas, to the infernal officers, and to all their retainers and followers, that they may aid this man to lay aside his *karma*, and attain Supreme Enlightenment.'

Chorus. 'Hail, Mahāprajñāpāramitā Sūtra!' (one bell).

'That the departed soul may ascend to the secretly adorned sphere of flowers (*mitsugonkezo*), we invoke!'

Ch. 'The Name of the great Buddha Vairocana' (one bell).

'That he may ascend to the world whose inhabitants hunger not, neither thirst (*anyō jōdo*), we invoke!'

Ch. 'The Name of Amitābha' (one bell);

The Sacred Name of Avalokiteśvara' (one bell).

'That he may be re-born in the inner palace of Tuṣitaloka, we invoke!'

Ch. 'The Name of the Buddha Maitreya' (one bell);

The Names of all the Saints in its inner and outer palaces' (one bell).

'That the Buddha-field may be accessible at all times to all who desire it, we invoke!'

Ch. 'The Three Holy Treasures' (one bell).

'That all sentient beings in the Dharmadhātu may be benefited equally (with him whose obsequies we celebrate), we invoke!'

Ch. 'The Name of Avalokiteśvara' (one bell);

The Name of Vajrapāṇi' (one bell).

[Here the officiant lays down his censer and takes up his *nyō-ō*, or mace.]

Namo ('homage').

Kimyo chōrai Mujōshuguan.

Shōrei indō Ōjōguraku,

¹ It is a common fiction amongst Japanese Buddhists that Jambudvīpa, which is, of course, Hindustan, comprises China and Japan as well. It is in Japanese pronounced *Nan-embudai*. In Nichiren Sect books it is Ich-embudai, which comes nearer to the sound of Jambudvīpa.

Ones, let us meditate on the Saddharmapundarika Sūtra. (One bell.)

For all the gods,¹ let us meditate on the Mahāprajñāpāramitā Sūtra. (One bell.)

For all Sentient Beings in the Dharmadhātu, let us meditate on the Bodhisattva Mañjuśrī. (One bell.)

The Four Reverential Invitations :²

'There is delight in the scattering of flowers (*bis*). We reverentially invite all the Tathāgatas in the Ten Quarters to alight on this sacred altar. There is delight, etc.

We reverentially invite Śākyamuni the Tathāgata to alight on the sacred altar. There is, etc.

We reverentially invite Amitābha the Tathāgata, etc. There is, etc.

We reverentially invite Avalokiteśvara, Mahāsthāmaprāpta (Kwannon and Seishi) and all other Bodhisattvas, etc. There is delight in the scattering of flowers.'

Namu Amida Butsu, Amida butsu, Amida butsu.

The reading of the *Sukhāvativyūha* (Amida Kyō).

Namu Amida Butsu, Amida butsu, Amida butsu.

Prayer of Transference (*ekō*) :

'All the benefits arising from the invocations we have just made, we transfer to the Lord Amitābha in the Land of Bliss. May we be graciously accepted in the great sea of His Vow, may our *karma* be destroyed, and may we realize *samādhi* ('supernatural tranquillity')! May the Devas and deities of the sky and the earth experience an increase of their dignities, and may the gods (Shinto) assembled in this place take pleasure in what we do! May the Great Teachers who have passed away accomplish Perfect Enlightenment, and may all souls, noble and mean,³ attain to Buddhahood! May Jikaku, our great Teacher,⁴ experience ever-increasing happiness, and may our benefactors during the last seven generations be re-born in the Land of Bliss! May the venerable soul that has now passed away be re-born in the Land of Bliss and attain to Buddhahood, seated on a lotus-seat of high degree! May the Court of our Wise Emperor be preserved from harm, and may the reign of His Majesty be long drawn out. May the country be peaceful, and may religion prosper! May the laymen in the Ten Quarters be free from evil and sorrow, and may the fraternity of monks who invoke the names of the Buddhas accomplish perfection! When they come to the end of their lives, may they not miss the ascent to the Land of Bliss, and may they meet Amitābha and his attendant hosts face to face! May their desire for *bodhi* ('supreme knowledge') never fail them, and may they be the leaders of all sentient beings in the Three Worlds and in Dharmadhātu! And may they all, partaking, as they do, of the same spiritual nature, alike attain to *bodhi*!'

The post-*ekō* hymn :

'May we, living in this world, be as though we lived in the heavens, like the lotus untarnished by the water! Prostrate on the ground, we worship the Pre-eminent One, with hearts purer than the lotus.'

Adoration of the Three Precious Things.

The Instructive Stanzas preached by the Seven Previous Buddhas.

The Confession of Sins :

'May the three obstacles (passion, *karma*, and the secondary results of *karma*, Jap. *hōshō*) be removed absolutely and universally for the benefit of the four benefactors (note 4 above), and for beings in all spheres of existence and throughout the *dharma*dhātu. For their sakes, we repent of all our sins, from the bottom of our hearts, in the presence of all the Buddhas in the Ten Quarters.'

Gonenmon, or meditation on the Five Gates of praising Amida, by which men enter into the Pure Land. These are all taken from Vasubandhu's treatise on the Pure Land (*Jōdoron*). They are : (1) *Raihaimon* ('the Gate of Worship'); (2) *San-tammon* ('the Gate of Praise'); (3) *Sagwanmon* ('the Gate of Prayer'); (4) *Kwansatsumon* ('the Gate of Observance'); and (5) *Ekōmon* ('the Gate of Transference'). The following is an abbreviated form of the *Gonenmon*, as recited at a Tendai funeral :

'With my head touching the ground I adore Amitābha the Sage, the noblest of two-footed beings, whom gods and men

delight to honour, who dwells in the choice Paradise of ease and bliss, surrounded by an innumerable host of the Sons of Buddha. The pure golden body of the Buddha is like the king of Mountains, and his footsteps, when he walketh in tranquillity, are like those of the still-treading elephant. His eyes are as pure as the lotus. I, therefore, with my head touching the ground, adore the venerable Amitābha. His face, good, round, and pure, is as that of the moon at her full. His majestic brilliancy is as that of thousands of suns and moons. His voice is as mighty as that of the celestial drum (thunder) and as soft as the voice of the Kariobing bird. Therefore I, placing my head on the ground, adore the venerable Amitābha. . . .

Thus I worship the Buddha and praise his merits. May the *dharma*dhātu be adorned (with many virtues)! May sentient beings, arriving at the term of their lives, go to the Western Land, and, meeting with Amitābha, may they accomplish Buddhahood! May sentient beings go and be re-born in the Paradise of Bliss! May they go and meet with Amitābha, the Venerable One!'

Next follow the burning of incense and the presentation of oblations (cakes, tea, hot water sweetened with sugar, boiled rice). The chief mourner, the family, and relatives offer incense. Then are read passages from the Saddharmapundarika Sūtra, illustrating the various 'gates' of the *Gonenmon*, and thus the *otogi* ceremony (which is supposed to take place on the day of death) is brought to a close.

(2) *Ceremonies in the house : the first part of the actual funeral*.—This is conducted by the *fukudōshi* ('second celebrant'), with a choir of six assistants, the first celebrant (*dōshi*) awaiting the cortège at the temple.

The Four Invitations (as in the *otogi*).

Stanza of Repentance :

'All the evil *karma*, etc. (see above, 'Ceremonies of the Zen,' p. 489b).

The three Refuges :

'Hail be to, and I take refuge in, Buddha.

" " " Dharma.

" " " Saṅgha.

I take 'refuge in Śākyamuni, chief of two-footed beings.¹

" " " Dharma, chief of lustless things.

" " " Saṅgha, noblest of congregations.

I have finished taking refuge in Buddha.

" " " Dharma.

" " " Saṅgha.'

The General Vows (*sōgan*) :

'Sentient beings are numberless. May I make them all traverse the sea of *samsāra* ('metempsychosis')! Evil passions are endless. May I help sentient beings to destroy them!

The gates of the Law (Scriptures) are infinite. May I cause sentient beings to understand them!

Supreme Buddhahood is ineffable. May I make sentient beings attain to it!'

Hyōhaku (see under 'Shingon,' above, p. 491b).

Chanting of a Sūtra; either the *Sukhāvativyūha* or the *Saddharmapundarika*.

Post-*ekō* hymn (as in the *otogi* above).

Burning of incense and offering of oblations (as above).

Chief mourner, family, and relatives burn incense.

The Invocation of the Buddhas in the Ten Quarters.

'Hail to the Buddhas in the Ten Quarters.

" " " Dharma " " "

" " " Saṅgha " " "

Hail to Śākyamuni Buddhas.

Hail to the Buddha Prabhūtaratna (mentioned in *Saddh*.)

Hail to Śākyamuni, whose body is divided into the Ten Directions.

Hail to the *Saddharmapundarika* Sūtra.

" Mañjuśrī the Bodhisattva (Monju).

" Samantabhadra the Bodhisattva (Fugen).'

This ends the ceremonies in the house.

(3) *The ceremonies in the temple*.—On arrival at the temple, the bell is tolled, and the choir of clergy take their seats, followed by the celebrant

¹ The Tendai very generally identify Śākyamuni with Amitābha. Hence the application of the same epithet to both. In the *Shinshū*, which derives much of its terminology from Tendai, this identification is known as *ni-on-tchi* ('the identity of the two Blessed Ones').

¹ i.e. the Shinto deities of Japan, adopted into the Buddhist pantheon.

² Similar forms will be found in the sects of Jōdo and Shinshū, which, originating in the Tendai, developed the doctrine of Amida. In the Nichiren, which rejects Amida, they are not found. The Zen derived neither doctrines nor ritual from Tendai, nor did the Shingon.

³ It was from this that Genshin (A.D. 942-1017), the first Japanese Patriarch of the Shinshū, derived his teaching about the twofold Paradise, *Kwedo*, in which the sins of the 'mean' souls are purged, and *Heōdo*, in which noble and mean alike attain to Perfection. This is brought out in Shinran's poem *Shōshinge*.

⁴ Jikaku, the second Patriarch of the Tendai (A.D. 794-864).

Hall! Buddhas and Bodhisattvas, whom I worship with bowed head and potent invocations! May this holy soul be led to, and be re-born in, the land of Bliss!

It is by the adornment and honouring of the Altar of the Teaching of Supernatural Power that Supreme Buddhahood may be obtained as in a moment. It is by the proclamation of the teaching that the material body is identical with Buddha,¹ that the Buddhas will themselves develop enlightenment in the doctrine that phenomenon is itself reality.

Next follows an *ekō* ('prayer of transference'). The officiant lays down his *nyō-i*, and resumes his censer. (One bell.)

'I respectfully pay homage to the Three Eternal Treasures, and extol the teachings of Buddha, the Tathāgata who has realized Nirvāṇa and passed beyond birth and death. If any man will listen to Him with all his heart, that man's soul shall be filled with unbounded joy. All composite things are impermanent; they are possessed of the necessity of growth and decay. They spring into existence; again they perish; their extinction is bliss.'

Then the *Rishukyō* (Buddhi Sūtra) is read, and the ceremonies in the house are closed. On the road from the house to the temple, the priests meditate upon Fudō, and chant his *mantra* (see above).

(2) *Ceremonies in the temple.*—Near the entrance to every Shingon graveyard or temple will be found the six images of Kṣitigarbha (*Roku-Jizō*), the friend and protector of the dead. These must first be worshipped, as also the corresponding set of six Avalokiteśvaras (*Roku-Kwannon*). Then the officiant, entering, walks three times round the sacred fireplace which is found in every Shingon temple, with manual gestures and formulæ representing the five elementary colours, the putting on of spiritual armour, the breaking of hell, the raising of the mind to the contemplation of *bodhi*, and the meditation on Samantabhadra (*Fugen*), the special patron of truth. The last of these *dhāraṇī* is *Om-sammaya satoban*, which we have mentioned above (p. 490b).

All this leads up to what appears to be the central portion of this temple-service, the ceremony of *abhiṣeka* (Jap. *kwanjō*, 'besprinkling'), a kind of baptism mystically performed, and transferred by a subsequent *ekō* to the credit of the deceased.² The *abhiṣeka* is threefold, and is followed by an *indō*, 'guiding words,' very much the same as that used in the Zen ceremonies. But the Shingon *indō*, which is traditionally attributed to Kōbō Daishi, is not in writing, neither are the *dhāraṇī* used in this, the most sacred part of the service. They are all handed down orally from teacher to disciple, and it is not every Shingon priest that knows them. Next follows a passage from the *Dainichikyō* (Mahāvairocana-nābhīśambodhi Sūtra), also with a secret accompanying *mantra*:

'Without leaving this physical body, man may attain to the supernatural power of *jinkyōtō* (Skr. *jādhīpāda*, 'means of attaining magic power'), and, walking freely about in great space, may comprehend the secret of the body.'

Then come: *abiraunken* (five times); the *mantra* and gesture of the eye of Buddha (not committed to writing); a list of the succession of teachers, with the *kaimyō* of the deceased inserted at the end; separate *mantras* and gestures for all the six elements composing the 'enlarged Abraxas'³—earth, water, fire, wind, emptiness, consciousness; the

¹ It is an essential feature in Shingon teaching that all material objects—stones, trees, the human body, etc.—partake of the Buddha nature.

² If the present writer is right in his conjecture that *Abarakia* or *Abiraunken* connects Jap. Shingon with Alexandrian Gnosticism, we may also be justified in supposing that the *abhiṣeka* thus administered in the Shingon funeral rites throws much light on the 'baptizing for the dead' mentioned by St. Paul (1 Co 15²⁹).

³ The sixfold scale of elements is represented by *A-ba-ra-kia*. When a sixth element, *daya* ('consciousness'), is added, the word becomes *Abarakia* *un*. The addition of this sixth element is sometimes, though without good authority, attributed to a priest named Ryūgō Hōshi, about A.D. 1140. We believe this to rest on a misinterpretation of the *Hōjōki*, 'History of the Hōjō Regents.' See *Romaji* for 20th Nov. 1907.

fujumon, 'address,' describing the deeds, character, etc., of the deceased; the repetition of several *mantras* and hymns; another formula of *ekō*, transferring all the merit thus accumulated to the credit of the deceased; the dedication (figuratively) of the staff that is to accompany the deceased on his journey through the valley of the shadow of death; a number of prayers never committed to writing; and a similar manual gesture on the 'most secret Nature.' This brings the service to a close.

3. *Ceremonies of the Tendai.*—The Tendai has always been a sect with strongly developed Erastian tendencies. In the days of its initiation in China, it was the ally of the Sui and Tang Governments in their efforts to control the heterogeneous mass of teaching calling itself Buddhist, which was flooding China in the 6th cent. A.D. Introduced into Japan about A.D. 800, it served the same ends. And, when Iyeyasu had brought peace to Japan in the 16th cent., the Tendai played a considerable part in the spiritual policing of the country which was carried on during the whole of the Tokugawa period. The Tendai rites which we are about to describe were those observed at the obsequies of Viscount Takamatsu (August 1904).

(1) *Ceremonies in the house: the otogi, or 'wake.'*—The ceremonies begin with the adoration of the Three Precious Things. The celebrant (*indōshi*) thus begins:

'I take my refuge in Buddha. May all sentient beings comprehend the great Path, and raise their thoughts towards the Supreme Object!

I take my refuge in the Law. May all sentient beings (follow my example, and), plunging deep into the Treasure House of the Scriptures,¹ acquire knowledge as vast as the sea!

I take my refuge in the Order. May all sentient beings (following my example) attain to positions of rule in the great assembly!

Then follows what is called the instructive stanza, as taught by the previous Buddhas, the predecessors of Sākyamuni:

'It is our prayer that all sentient beings may refrain from the commission of sin, that they may do good, and purify their own minds. This is the teaching of all the Buddhas. We worship the assemblage of the Saints.'

The Stanza of Evening:

'Hearken to the Stanza of Impermanency under the similitude of evening. When this little day is over, our lives will end and we shall disappear. We are here like fish in a shallow (basin of) water. O ye Bhikkhus, is there anything in the world that is pleasurable? Exert yourselves with diligence, and lose no time in saving yourselves from the fire. Meditate on the impermanency of material objects which are empty as the void, be diligent, be not slothful.'

The Stanza of Impermanency:

'All composite things are impermanent, for they are liable to growth and decay. They spring up into existence, and perish. Their extinction is bliss. The Lord Buddha has realized Nirvāṇa and banished for ever birth and death. He that wills to listen to this teaching with his whole heart shall gain immeasurable happiness.'

The Six 'Fors':

'For all believers² in the Ten Quarters, let us meditate on the Tathāgata Sākyamuni. (One bell.)

For His Majesty our Emperor, let us meditate on Yakushi Rurikō Nyorai.³ (One bell.)

For the four "benefactions"⁴ in the Three Worlds, let us meditate on Amida Nyorai. (One bell.)

For our Great Teacher, Dengyō Daishi,⁵ and all the Venerable

¹ The Tendai is one of those sects which profess to base their tenets on the whole vast Canon of the Mahāyāna.

² The Jap. word is *danna* (Skr. *dānam*, 'generosity'). Giving is the first duty of a layman. The word has come to mean 'householder,' 'layman,' and is commonly used by servants, etc., in addressing their master.

³ See above, for the connexion of Tendai with the State. Yakushi (Bhaiṣajyaguru) is the master of medicine, who went about healing sickness and had twelve disciples. He was a very favourite god during the Nara period.

⁴ The *eki-on* represent the gratitude we owe for the benefactions we receive from (1) our parents, (2) our rulers and the State, (3) sentient creatures in general, and (4) the Three Precious Things of religion.

⁵ Dengyō Daishi, founder of the Japanese Tendai, A.D. 767-822.

Ones, let us meditate on the Saddharmapundarika Sūtra. (One bell.)

For all the gods,¹ let us meditate on the Mahāprajñāpāramitā Sūtra. (One bell.)

For all Sentient Beings in the Dharmadhātu, let us meditate on the Bodhisattva Mañjuśrī. (One bell.)

The Four Reverential Invitations :²

'There is delight in the scattering of flowers (*vis*).

We reverentially invite all the Tathāgatas in the Ten Quarters to alight on this sacred altar. There is delight, etc.

We reverentially invite Śākyamuni the Tathāgata to alight on the sacred altar. There is, etc.

We reverentially invite Amitābha the Tathāgata, etc. There is, etc.

We reverentially invite Avalokiteśvara, Mahāsthāmaprāpta (Kwannon and Seishi) and all other Bodhisattvas, etc. There is delight in the scattering of flowers.'

Namu Amida Butsu, Amida butsu, Amida butsu.

The reading of the *Sukhāvativyūha* (Amida Kyō).

Namu Amida Butsu, Amida butsu, Amida butsu.

Prayer of Transference (*ekō*) :

'All the benefits arising from the invocations we have just made, we transfer to the Lord Amitābha in the Land of Bliss. May we be graciously accepted in the great sea of His Vow, may our *karma* be destroyed, and may we realize *samādhi* ('supernatural tranquillity')! May the Devas and deities of the sky and the earth experience an increase of their dignities, and may the gods (Shinto) assembled in this place take pleasure in what we do! May the Great Teachers who have passed away accomplish Perfect Enlightenment, and may all souls, noble and mean,³ attain to Buddhahood! May Jikaku, our great Teacher,⁴ experience ever-increasing happiness, and may our benefactors during the last seven generations be re-born in the Land of Bliss! May the venerable soul that has now passed away be re-born in the Land of Bliss and attain to Buddhahood, seated on a lotus-seat of high degree! May the Court of our Wise Emperor be preserved from harm, and may the reign of His Majesty be long drawn out. May the country be peaceful, and may religion prosper! May the laymen in the Ten Quarters be free from evil and sorrow, and may the fraternity of monks who invoke the names of the Buddhas accomplish perfection! When they come to the end of their lives, may they not miss the ascent to the Land of Bliss, and may they meet Amitābha and his attendant hosts face to face! May their desire for *bodhi* ('supreme knowledge') never fail them, and may they be the leaders of all sentient beings in the Three Worlds and in Dharmadhātu! And may they all, partaking, as they do, of the same spiritual nature, alike attain to *bodhi*!'

The post-*ekō* hymn :

'May we, living in this world, be as though we lived in the heavens, like the lotus untarnished by the water! Prostrate on the ground, we worship the Pre-eminent One, with hearts purer than the lotus.'

Adoration of the Three Precious Things.

The Instructive Stanzas preached by the Seven Previous Buddhas.

The Confession of Sins :

'May the three obstacles (passion, *karma*, and the secondary results of *karma*, Jap. *hōshō*) be removed absolutely and universally for the benefit of the four benefactors (note 4 above), and for beings in all spheres of existence and throughout the *dharmadhātu*. For their sakes, we repent of all our sins, from the bottom of our hearts, in the presence of all the Buddhas in the Ten Quarters.'

Gonenmon, or meditation on the Five Gates of praising Amida, by which men enter into the Pure Land. These are all taken from Vasubandhu's treatise on the Pure Land (*Jōdoron*). They are: (1) *Raihaimon* ('the Gate of Worship'); (2) *Santammon* ('the Gate of Praise'); (3) *Sagwanmon* ('the Gate of Prayer'); (4) *Kwansatsuemon* ('the Gate of Observance'); and (5) *Ekōmon* ('the Gate of Transference'). The following is an abbreviated form of the *Gonenmon*, as recited at a Tendai funeral :

'With my head touching the ground I adore Amitābha the Sage, the noblest of two-footed beings, whom gods and men

delight to honour, who dwells in the choice Paradise of ease and bliss, surrounded by an innumerable host of the Sons of Buddha. The pure golden body of the Buddha is like the king of Mountains, and his footsteps, when he walketh in tranquillity, are like those of the still-treading elephant. His eyes are as pure as the lotus. I, therefore, with my head touching the ground, adore the venerable Amitābha. His face, good, round, and pure, is as that of the moon at her full. His majestic brilliancy is as that of thousands of suns and moons. His voice is as mighty as that of the celestial drum [thunder] and as soft as the voice of the Kariobinga bird. Therefore I, placing my head on the ground, adore the venerable Amitābha. . . .

Thus I worship the Buddha and praise his merits. May the *dharmadhātu* be adorned (with many virtues)! May sentient beings, arriving at the term of their lives, go to the Western Land, and, meeting with Amitābha, may they accomplish Buddhahood! May sentient beings go and be re-born in the Paradise of Bliss! May they go and meet with Amitābha, the Venerable One!'

Next follow the burning of incense and the presentation of oblations (cakes, tea, hot water sweetened with sugar, boiled rice). The chief mourner, the family, and relatives offer incense. Then are read passages from the Saddharmapundarika Sūtra, illustrating the various 'gates' of the *Gonenmon*, and thus the *otogi* ceremony (which is supposed to take place on the day of death) is brought to a close.

(2) *Ceremonies in the house: the first part of the actual funeral*.—This is conducted by the *fukudōshi* ('second celebrant'), with a choir of six assistants, the first celebrant (*dōshi*) awaiting the cortège at the temple.

The Four Invitations (as in the *otogi*).

Stanza of Repentance :

'All the evil *karma*, etc. (see above, 'Ceremonies of the Zen,' p. 489b).

The three Refuges :

'Hail be to, and I take refuge in, Buddha.
" " " Dharma.
" " " Saṅgha.
I take 'refuge in Śākyamuni, chief of two-footed beings.¹
" " " Dharma, chief of lustless things.
" " " Saṅgha, noblest of congregations.
I have finished taking refuge in Buddha.
" " " Dharma.
" " " Saṅgha.'

The General Vows (*sōgwan*) :

'Sentient beings are numberless. May I make them all traverse the sea of *samsāra* ('metempsychosis')!'

Evil passions are endless. May I help sentient beings to destroy them!

The gates of the Law (Scriptures) are infinite. May I cause sentient beings to understand them!

Supreme Buddhahood is ineffable. May I make sentient beings attain to it!'

Hyōhaku (see under 'Shingon,' above, p. 491b).

Chanting of a Sūtra; either the *Sukhāvativyūha* or the *Saddharmapundarika*.

Post-*ekō* hymn (as in the *otogi* above).

Burning of incense and offering of oblations (as above).

Chief mourner, family, and relatives burn incense.

The Invocation of the Buddhas in the Ten Quarters.

'Hail to the Buddhas in the Ten Quarters.

" " " Dharma " " :

" " " Saṅgha " " :

Hail to Śākyamuni Buddha.

Hail to the Buddha Prabhūtaratna (mentioned in Saddh.).

Hail to Śākyamuni, whose body is divided into the Ten Directions.

Hail to the Saddharmapundarika Sūtra.

" Mañjuśrī the Bodhisattva (Monju).

" Samantabhadra the Bodhisattva (Fugen).'

This ends the ceremonies in the house.

(3) *The ceremonies in the temple*.—On arrival at the temple, the bell is tolled, and the choir of clergy take their seats, followed by the celebrant

¹ The Tendai very generally identify Śākyamuni with Amitābha. Hence the application of the same epithet to both. In the *Shinshū*, which derives much of its terminology from Tendai, this identification is known as *ni-son-itchi* ('the identity of the two Blessed Ones').

¹ i.e. the Shinto deities of Japan, adopted into the Buddhist pantheon.

² Similar forms will be found in the sects of Jōdo and Shinshū, which, originating in the Tendai, developed the doctrine of Amida. In the Nichiren, which rejects Amida, they are not found. The Zen derived neither doctrines nor ritual from Tendai, nor did the Shingon.

³ It was from this that Genshin (A.D. 942-1017), the first Japanese Patriarch of the Shinshū, derived his teaching about the twofold Paradise, *Kwado*, in which the sins of the 'mean' souls are purged, and *Hōdo*, in which noble and mean alike attain to Perfection. This is brought out in Shinran's poem *Shōshinge*.

⁴ Jikaku, the second Patriarch of the Tendai (A.D. 794-864).

and his assistant. The choir recite, in debased Sanskrit, the fourfold hymn of Wisdom:

'Om basarasataba shigyaraka.
basarasatanamadotaran.
basaradarumagyaganai.
basarakarumakaro bava.'¹

The celebrant now goes up to the High Altar, and there makes a *mudrā* ('manual gesture') known as *kōmyōgu*.²

An introit is sung, the 'Hymn of taking the seat.'

Indō, 'guiding words,' spoken by the celebrant.

The praise of the *shakujō*, 'pilgrim's staff':

'I take a staff in my hand (does so). May all sentient beings follow my example!'

The whole choir say with the celebrant:

'I give a feast of charity, and, showing the true Way, make offerings to the Three Precious Things (*bis*). With a pure mind I make offerings to the Three Precious Things (*bis*). Striving to raise a pure mind, I make offerings to the three gems (shakes the *shakujō* twice); may all sentient beings follow my example! May I become the Teacher of Devas and men; may I fill the Heavens with my vows; may I cause suffering beings to traverse the sea of *samsāra*, and, guarded by spiritual beings, to make offerings to the Three Precious Things! May they meet with Buddhas and obtain the Buddhahood! (Shakes the *shakujō* twice.) May all sentient beings learn the sacerdotal Truth³ (*shintai*); may they treat their fellow-beings with respect and sympathy; may they learn worldly truth and treat their fellow-beings with respect and sympathy; may they learn the doctrine of the One Vehicle,⁴ and treat their fellow-beings with respect and sympathy; may they respectfully make offerings to the Three Precious Things—to Buddha, to Dharma, to Saṅgha—to each individually, to all three conjointly (*ittai sambo*). [The *shakujō* is shaken twice.] May all sentient beings practise Śīlapāramitā (the perfection of character), . . . Dānapāramitā (the perfection of generosity), . . . Kṣāntipāramitā (the perfection of long-suffering), . . . Vīryapāramitā (the perfection of fortitude), . . . Dhyānapāramitā (the perfection of meditation), . . . Prajñāpāramitā (the perfection of wisdom), . . . and may they treat their fellow-beings with benevolence and sympathy! [The *shakujō* is shaken twice.] Buddhas in the past have taken up the pilgrim's staff and have been enlightened. Buddhas in the present have taken up the staff and have been enlightened. Buddhas in the future will take up the staff and be enlightened. I therefore take up the staff and make offerings to the Three Precious Things (*bis*).'

The celebrant comes down from the High Altar and burns incense.

Offerings of tea and hot water with sugar.

Lifting the coffin off the bier and closing it.

The assistant (*fukudōshi*) reads the Funeral Oration.

Chanting of a Sūtra.

Chief mourner, family, and relatives burn incense.

General congregation follow their example.

When all who wish have burned incense, the celebrant and choir leave the temple.

So end the funeral ceremonies of the Tendai.

4. Ceremonies of the Jōdo.—The Jōdo sect, founded by Hōnen Shōnin in A.D. 1174, is an

¹ This in Sanskrit would be somewhat as follows:

'Om vajra sattva saṅgraha!
vajrasatnamanuttaram!
vajradharma gāganah!
vajrakarmakaro bhava!'

'Hail! Store of Diamond-Essence! Diamond-Jewel that hath none higher! Heaven of the Diamond-Law! Be thou working the Diamond-Karma!'

² *Kōmyōgu* is very possibly a Manichæan word. It was used in the designation of the Manichæan temples (cf. Lloyd, *Shinran and his Work*, Appendix I. and II.).

³ There is a distinction made in Tendai (also in Shinshu) between the 'noble' and the 'mean,' just as Manichæans were divided into 'hearers' and 'perfect.' For the hearers only a very simple creed was required (Jap. *zokutaimon* [cf. Lloyd, *op. cit.* p. 109]). A more elaborate form of faith and life was required from the perfect (*shintaimon*), which included assent to theological truths.

⁴ The Jōdo sects maintain that the One Vehicle is the one by Faith in Amida, also that the Tendai, if true to their own doctrinal standards, are committed to this position. It is perhaps worth our while to note as an interesting point that Amida is, to Tendai, Jōdo, and Shinshu, pre-eminently the Buddha, that the character for Buddha was introduced into China A.D. 64, that it signifies 'the man with the arrows and bow' (Emp. Ming-ti's Vision; cf. Rev 67), that in the legend it is connected with a 'white horse,' and that, divided into its constituent elements (man, arrows, bow), it represents the first three letters of the name of Jesus.

offshoot of the Tendai, or rather an attempt to call back the Tendai to that sole Faith in Amitābha which the Jōdo sects maintain to be the essential feature of primitive Mahāyānism.

(1) *The service in the house* (*Gongyōshiki*).—Opening verse of the regular service:

'May our minds be purified as the incense-burner! May our minds be bright and clear as the fire of Wisdom!

Burning the incense of morality and tranquillity, thought by thought, make offerings to the Buddhas in the Ten Quarters, in the Three Worlds.'

Sambōrai, or worship of the Three Precious Things:

'With all our hearts we pay supreme honours to the Supreme Buddhas in the Ten Quarters. . . .

With all our hearts we pay supreme honours to the Supreme Dharmas in the Ten Quarters. . . .

With all our hearts we pay supreme honours to the Supreme Saṅghas in the Ten Quarters. . . .'

Shibujō, or fourfold Invitation, as in the ceremonies of the Tendai: (1) all the Buddhas, (2) Śākyamuni, (3) Amitābha, (4) Kwannon, Seishi, and the other Mahābodhisattvas.

Tambutsu no ge, or hymn of praise for all the Buddhas:

'The handsome physical bodies of the Tathāgatas are unparalleled in the Universe. They are incomparable beyond conception. Therefore, behold, I worship them. The physical bodies of the Tathāgatas are inexhaustible and everlasting, and their Wisdom is as their bodies. Dharmas are infinite. Therefore I take refuge in them.'

Ryakusange, or abridged form of confession:

'All the evil *karmas*, etc., as in the Zen and Tendai.

Sankikai, or the threefold Taking of Refuge:

'I take refuge in Buddha . . . Dharma . . . Saṅgha.'

The ceremony of tonsure. While the head of the corpse is being shaved, the name of Amitābha is being repeated ten times. This is known as *Jūnen*. The number of repetitions shows that the shaving occupies only a short time. It is merely symbolical. In the Shinshu sect there is a ceremony called *Kamisori*, 'head-shaving,' roughly corresponding to Christian confirmation, which implies a formal acceptance of and admission into the sect. It is administered by the head of the sect only, and consists in passing a golden razor lightly over the hair of the candidates as they kneel before him. The ceremonial shaving of the dead is very often nothing more than this.

Kaikyōge, or hymn introductory to the reading of the Scriptures:

'The Law, which is pre-eminent, profound, and sought out,¹ can rarely be met with, scarcely once in a thousand *kalpas* ["ages of the world"]. But we have seen and heard, and do accept it. May we understand the true meaning of the Tathāgata's teaching!'

Reading of a Sūtra—generally a chapter from the Amitāyurdhyāna Sūtra, or the Aparimitāyus Sūtra. Sometimes also the Amitābhatathāgata-muladhāraṇī is read:

'In accordance with the Original Vow of the Buddha we pray that we may hear His Name, and be re-born in the Land of Illas. On being re-born in that land, may we all obtain the safe position from which there is no falling back! The 84,000 doors,² each different from the others, were opened as means of escape from ignorance, karma, and the results of karma. A sharp sword verily is the name of Amitābha Buddha. He that shall invoke it but once and meditate thereon,—his sins shall be destroyed for ever.'

Hotsugwanmon, or the raising of vows:

'Humbly we pray that our minds, at the hour of death, may be undistracted, unconfused, and in possession of all their faculties. With mind and body free from pain and filled with joy, in the state of contemplation, and in the presence of the Holy Ones (Amitābha and his 25 Bodhisattvas), by the merits of the Buddha's Vow, may we have a favourable re-birth in the Land of Amitābha.

On being re-born in that land, may we obtain the Sixfold Supernatural Power (*roku-jin-dzu*), which shall enable us to assume visible forms at will and to manifest ourselves in the Worlds of the Ten Quarters for the Salvation of mankind. The Sky and the Law are infinite in extent; our vows are co-

¹ Not in the Biblical sense of 'sought out of them that have pleasure therein.' The allusion is to the Vow of Amitābha, which was framed after a careful survey and examination of all the Buddha-faiths.

² i.e. the doctrines of Buddhism.

extensive with them. With these vows we take refuge in Amitābha Buddha with our whole hearts.

Kōmyō henjō
Jippō sekai
Nembutsu shūjō
Sesshufusha,

Shining upon all the worlds in the Ten Quarters with the bright rays issuing from his halo, the Buddha accepts the beings who call upon him. He will never abandon them.

Invocation of Amida's name.

Ekō, 'transference':

(1) Special: 'May the soul of the newly-deceased N. (*kaimyō*) migrate to the pure fields, and may his *karma* give up dust-like trouble! May he see Buddha, hear the Law, and rapidly reach the pre-eminent way!'

(2) General: 'May the merits resulting from this service be transferred to all sentient beings alive! May they all lift up their hearts to Enlightenment, and all be re-born in the land of ease and comfort!'

Shinseigwan, or Four Holy Vows (see Tendai rites).

Sanrai, or Worship of the Three Precious Things: *Namu Amida butsu* is repeated nine times, three times for each.

This concludes the service in the house. The procession is now formed and starts for the temple.

(2) *The service in the temple* is almost a replica of that in the house. It begins with *gongyōshiki*, *sambōrai*, *shibujō*, *ryakusange*, and *tambutsu no ge* (see above). Then follow the beating of cymbals (*nyōhachi*), the *indō*, or 'guiding words,' *kaikyōge*, the reading of Scriptures, *kōmyō henjō*, etc., the invocation of Buddha's name, and another *ekō*:

'May the merits arising from this chanting of the Sūtra and the invocation of Buddha's name be transferred to the newly-deceased N. May his soul migrate,' etc.

(The rest as in the *ekō* above.)

Then follow invocations of Amida's name, the Four Holy Vows (as in Tendai), and the adoration of the *honzon*, or image of Amitābha. This brings the service to a close.

5. Ceremonies of the Shinshu.—The Shinshu sect, founded by Shinran Shōnin in A.D. 1224, carries still further than the Jōdo the doctrine of salvation by Faith only. The account of the ceremonies described in this section is taken from the *Fūzokugwahō* for Feb. 1894, and gives a summary view of the obsequies of Kōshō, the 21st Abbot of the Eastern Hongwanji, who died at Kyoto on 15th Jan. 1894.

(1) *The worship of the corpse*.—This ceremony is not peculiar to the Shinshu sect, but is observed in the case of all monks and priests [the Shinshu clergy are not monks; they marry and live with their families]; but naturally, in the case of the head of a great organization, such as the Hongwanji, the ceremonies connected with this worship were more carefully carried out than usual.

Three days after death, the corpse was dressed in silk crêpe robes of a grey colour, with a small *kesa* ('stole') over the shoulders, and was placed in a sitting posture on a *kyōkuroku* ('camp-chair') in one of the rooms of the Abbot's official residence. The face was covered with a white cloth, so that only the eyes were visible. Screens were set up behind the chair and on either side of it, and in front there was a slight curtain of split bamboo, which could easily be drawn up and down. Six laymen, in *kamishimo* (upper and nether ceremonial garments) of a grey colour, were constantly in attendance, to draw up the curtain whenever a group of worshippers presented themselves. Many thousands of Shinshu believers thus offered their last respects to the deceased prelate, the worship consisting of a silent prostration before the corpse.

On the following day the corpse was put into a coffin and removed to another apartment, where similar worship was offered before it. In this case, however, a scroll-picture of Amitābha was suspended on the wall behind the coffin, to represent the idea that the deceased had now passed

definitely under Amitābha's protection. Immense crowds of worshippers from every part of Japan came to worship.

(2) *The farewell to the corpse*.—This took place on the following day. Three short ceremonies were observed, the first in the apartment where the coffin had been lying in state since the previous day. It was then removed to the *daishidō*, or hall set apart for the worship of Shinran Shōnin, the founder of the sect, and from there to the *Amidadō*, or Hall of Amida. In each of these places a service was held, consisting very largely of repetitions of the *Namu Amida butsu*¹ and the burning of incense. Not unnaturally the third service was esteemed the most dignified. Not only blood relations, but proxies representing the princes of the blood, and the heads of other subdivisions of the Shinshu, came forward to burn incense, and, immediately after this last ceremony was over, the procession was formed and the funeral cortège started for Uchino, where the main obsequies were to take place.

(3) *The procession* need not delay us. It was on the same general lines as the procession mentioned at the beginning of this section (above, p. 489). Only, as befitting a personage who, in addition to being the hereditary head of one of the largest of the Buddhist sects in Japan, was a peer of the realm, and a collateral descendant of the great Fujiwara family, it was, of course, a very imposing procession, more than a mile in length.

(4) *The service at Uchino*.—Uchino was in former days the cremation-place connected with the Eastern Hongwanji temple. But the growth of the city has rendered it unsuitable for the purpose. In the case, however, of the funeral of an Abbot, there are historical reasons why a part of the service should still be held there. An open space had therefore been curtained off, large enough to seat the great number of invited guests, and it was here that that part of the service took place which in ordinary cases would be held in the temple. (The farewell to the corpse, thrice repeated, corresponded to the service in the house at ordinary funerals. It followed, then, almost exactly the same order as is observed in Jōdo funerals.) A temporary crematorium had been erected for the symbolic cremation to be held here. The chief mourners were the new Abbot and his wife (the *urakata*). The actual cremation took place later at Kwazan, where the regular crematorium is situated.

The service, which was of the regular type,² followed the usual order:

The Four Invitations.

The *Shōshinge*.³

Nembutsu wasan,⁴ or hymn in praise of Buddha, followed by invocations of Amida's name.

Ekō, as in Jōdo sect, with the following addition:

Gwanishi Kudoku,
Byōdōse issai,
Dōhōtsu bodai shin,
Ōjō anrakukoku,

We pray that the merit of this service may be given equally to all sentient beings, that they may lift up their minds to the attainment of enlightenment, and ascend for re-birth in the Land of Ease and Comfort.

¹ It is to be noted that the common interpretation given to these words is 'Believe in (trust) me; for I will save you.' This meaning, which has been read into, not out of, the Sanskrit words, is interesting.

² In the memorial service held by the Shinshu in Tokyo in honour of King Edward VII., the form approximated much more closely to the Tendai ritual. The explanation of this will be found in the Tendai origin of the Shinshu, and also in the fact that it was not a funeral service proper.

³ This is a poem by Shinran Shōnin giving an account of the transmission of the Amida doctrines. For text and tr. see Lloyd, *Shinran and his Work*, p. 35.

⁴ *Wasan* are hymns of praise composed in Japanese. The Shinshu sect, which, to its credit, has always used the vernacular whenever possible, is particularly rich in these hymns, some of which are of very great interest.

Symbolical cremation. The Abbot entered the temporary crematorium and lighted some straw, and, as the smoke issued from the building, it was accepted as an actual cremation. This was, of course, a special feature of this particular funeral. *Shōshinge* again.

Burning of incense by mourners, etc.

The coffin was now removed for the actual cremation.

(5) *The cremation*.¹—This was carried out semi-privately at Kwazan, only the new abbot, near relatives, old body-servants, and the superintendent of the crematorium being admitted into the curtained-off space around the furnace. The pyre was made of pine logs skilfully arranged on a hearthstone, and was attended to by four master-carpenters in white robes, overlooked by two priests in black. The Abbot, as chief mourner, having already, as we have seen, symbolically lighted the fire, it was apparently not necessary for him to do it actually on this occasion; though in ordinary funerals this is a duty which always falls upon the chief mourner. It must be a 'pure' fire (no sulphur or brimstone to be used in the kindling), and, when once kindled, is kept alive not only with additional fuel, but also by constant libations of *natane abura* ('rape-seed oil'). It is desirable that the coffin, as in this case, should be so thick that the body inside may be completely consumed before the sides of the coffin fall in; but this is, of course, merely a counsel of perfection not applicable in all cases.

When the cremation was over, the remains were reverently collected, with a short service (not used in ordinary cases), put into a small box, covered with a white silk cloth, and carried back to the late Abbot's residence, where they were privately disposed of in a suitable manner. A certain amount of secrecy was observed on this occasion. There existed for many centuries a bitter feud between the parent sect of the Tendai and her more prosperous but rebellious daughter, the Shinshū. When Rennyo Shōnin, the greatest of all the successors of Shinran, died in A.D. 1499, the jealous Tendai monks made an assault on the procession that was carrying home the sacred relics, and tried to seize and dishonour them. Since that time it has been customary, at the cremation of a Hongwanji Abbot, to bring the ashes home in secret, by some circuitous route, and under guard.

In collecting the bones, etc., after a cremation, it is customary to pick them up with chop-sticks, one of wood, and one of bamboo. Hence, in ordinary life it is deemed most unlucky to use chop-sticks of different materials, e.g. one of wood and one of bone. Shingon believers send the bones to Kōyasan; amongst the Shinshūists in Echigo and Shinshū they are often preserved in the house. In most cases, however, they are interred. Great efficacy is sometimes attributed to these relics (*shari*).

6. Ceremonies of the Nichiren sect.—The Nichiren sect, founded in A.D. 1253, differs from all other sects of Buddhism in that it concentrates the whole of its attention on the Saddharmapundarika Sūtra, which it almost personifies. This Sūtra consists of two parts, known as *Shakumon* (chs. i.-xiv.) and *Hommon* (chs. xv.-end); and the peculiar position of the Nichiren School is that for it the latter is the most important portion of the Sūtra, while all other Japanese sects lay special stress on the former. Nichiren himself claimed to be the first of the Four Great Bodhisattvas mentioned in the latter part of that Sūtra as rising out of the earth at the head of a large company

of believers. The services are very long; but they admit of condensed statement, because they consist almost entirely of readings from the Saddharmapundarika Sūtra.

(1) *The house ceremonies*.—(a) *Makuragyō*, entrusted to a minor priest (*shokesō*).

Kwanzōmon, or words of Invitation:

'We humbly invite Jūryō,¹ the honzon (principal idol) of the True Teaching,² to be present.

Glorify to the Saddharmapundarika Sūtra, in which are contained the Three Mysteries of the True Teaching.³

Glorify to Śākyamuni-Buddha, who is the great benefactor of sentient beings, who accomplished enlightenment before innumerable ages, and who alone is the Master of the Teachings.⁴

Glorify to the Buddha Taishō,⁵ who certified to the teachings of the Saddharmapundarika Sūtra.

Glorify to the Buddhas mentioned in the *Hommon* ('Real Teaching'—see above), as also to those spoken of in the *Shakumon* ('Temporary Teaching'), in this and in other worlds. Glorify to the Great Bodhisattvas in the thousand worlds, who were taught by the Buddhas of the *Hommon*, and who issued forth in troops out of the earth, when the *Kenbōtōhon* was being preached.

Glorify to the Three Everlasting Precious Things mentioned in the Saddh. Sūtra, in which the Temporal Buddhas are secreted (swallowed up) and the True Buddha revealed.

Glorify to Nichiren,⁶ the Great One, the founder of the sect, our mighty leader, who has been entrusted by Śākyamuni with the Secrets of the True Doctrine.

Glorify to the successive Patriarchs (of Nichirenism).

May all the Devas and good gods, the protectors of the True Faith, descend upon the altar and watch our worship.'

Reading of *Hōbenhon*, sect. 2 of Saddh. Sūtra.

Jūryōhon, sect. 16

Much repetition of the *Daimoku*,⁷ or the 'true standard of faith and worship (*Namumyōhōrenge-kyō*, 'Glory to the Lotus-Scripture of the Wonderful Law').

Ekō, 'prayer of transference.' The gist of the prayer is that, by the virtue of the Sūtra, sentient beings may attain to Buddha-ship in their bodies.

Bestowal of a *Kaimyō*. This service may be performed before or after death, or may be entirely omitted. It is of great importance to the student, as giving the doctrinal position of the Nichiren body.

(b) *The wake (otogi)*. This is also entrusted to a minor priest. The whole of the Saddharmapundarika is chanted once, or sect. 16 thirty-six times. Sermons are delivered at intervals—for the edification both of the living and of the dead.

The tonsure. A leaf of *shikimi* is cut with a razor over the head of the deceased.

(c) The home funeral service, by one or more minor priests. Five banners are prepared and set up, inscribed as follows:

(1) 'Glory to Prabhūtaratna, to the Saddh. Sūtra, to Śākyamuni, to Nichiren, the Great Superior Teacher of the Latter Days.'

(2) 'Glory to Jōgyōbosatsu,' i.e. to the Nichiren, first of the Four Great Bodhisattvas.

(3) 'Glory to Muhengyōbosatsu,' second of the Four Great Bodhisattvas.

(4) 'Glory to Jōgyōbosatsu,' third of the Four Great Bodhisattvas.

(5) 'Glory to Anryūgyōbosatsu,' fourth of the Four Great Bodhisattvas.

Four smaller banners are also prepared and set up, and inscribed as follows:

1 Jūryō is a portion of the Saddh. Sūtra personified (sect. 20), and treated as the embodiment of the Dēity.

2 Nichirenists maintain that there are three stages of Buddhist Teaching—the Smaller Vehicle, the Larger, and the True (Jūryō).

3 The Three Mysteries are: (1) The revelation of the true object of human worship made in the Sūtra, (2) the establishment of the true standard of faith and worship, (3) the true teachings of morality.

4 Observe that the Śākyamuni of Nichirenism is only incidentally the historical Gautama.

5 Taishō (Skr. *Prabhūtaratna*) is a Buddha, previous to Śākyamuni, who, in the Saddh., is seen descending upon the latter as he teaches, in a *stūpa*; who is dead, then revives, and, after commending the teachings which Śākyamuni is giving in the Sūtra, becomes in some mysterious way identified with him. This account appears in *Kenbōtōhon* ('opening of the stūpa'), the 12th section of the Saddh. Sūtra (Chinese). It is to be noticed that Taishō's Paradise is represented as in the East.

6 Nichiren is supposed to have had the power of teaching committed to him by virtue of his being a re-incarnation of the first of the Four Great Bodhisattvas.

¹ The Japanese word for 'cremation' is *dabū*. It comes from the Pāli *jāḍa* (causal of *jāḍa*, 'to burn'), and is one of the few instances of the survival of a Pāli word in Japanese.

- (1) *Kaibutchiken*, i.e. 'May the deceased attain to the opening of a supernatural insight like that of Buddha!'
 (2) *Jibutchiken* . . . 'May he show forth a . . . etc. . . . !'
 (3) *Gobutchiken* . . . 'May he understand, more and more . . . etc. !'
 (4) *Nyibutchiken* . . . 'May he enter into . . . etc. . . . !'

Whilst the banners are being set up, the priests read—

Hōbenhon, sect. 2 of the *Saddh. Sūtra*.

Juryōhon, sect. 16 " " (or only its *gāthās*).

Ekō, as before.

(2) *Ceremonies at the temple*.—

Kwanjōmon (see above).

Juryōhon (prose sections only).

Beating of drums and cymbals.

After this a minor priest says in a distinct voice :

'*Nyokyakukenyaku*

Kaidaijōmon,

Lo! the Gate of the Great Castle has been opened, and the bolt has been taken away' (from the *Kenhōtōhon*, sect. 12).

Offerings.

Indō, pronounced by the leader (*dōshi*).

Chanting the *gāthā* portions of sect. 16 of the *Saddh. Sūtra*.

Incense.

The *Daimoku*, oft repeated.

Ekō.

The ceremonies come to a close. There seem to be no ceremonies specially connected with cremation or interment.

See, further, art. **FESTIVALS** (Japanese).

LITERATURE.—The greater part of this article is based on information collected for the writer by his friend Mr. S. Tachibana, a Buddhist priest of the Zen sect. The other authorities have been cited in the text. A. LLOYD.

DEATH AND DISPOSAL OF THE DEAD

(Jewish).—1. Conception of death.—Although there is uniformity, in a sense, in the physical phenomena of death, its character and circumstances and the impression which it makes vary in different times and places. In ancient Israel, death, like life, was more a matter of the family than it is now; it was not so much an occasion when an external professional element, represented by priests, lawyers, doctors, nurses, and hospitals, broke in upon or set aside the family. Again, violent deaths were more common; and the last illness of a dying man was not prolonged, as it is now, by the resources of medical science. In all probability the death-rate was much higher than it is with us, so that death was more common and familiar.

The impression made by death depends partly on belief as to its cause and as to the future of the individual after death. The modern mind is occupied with the physical cause of death, the particular disease, and the failure of remedial treatment. The Israelite and the Jew thought of death as an act of God; more especially a death in early years, or in the prime of life, or under exceptionally distressing circumstances, was often regarded as a judgment upon sin.

Death¹ was not the annihilation of the individual—at any rate, according to the ordinary Hebrew view. A feeble ghost of the dead man maintained a dim, shadowy existence in Sheol, the under world or Hades. But probably in early times other beliefs supplemented or replaced this view. There are traces of ancestor-worship and necromancy in ancient Israel, and these imply that the spirits of the dead could manifest themselves to the living, and could exercise some influence upon their fortunes. Samuel, for instance, appeared at the call of the witch of Endor and foretold the death of Saul (1 S 28). Although there is little positive evidence, it is probable that the popular

belief in ghosts prevailed in earlier as in later times. In Lk 24³⁷ the Apostles take the risen Lord for a ghost.

In a sense the Israelite looked forward to reunion after death, so far as this may be implied in such phrases as 'buried with his fathers' (2 K 12²¹), 'slept with his fathers' (1 K 2¹⁰); but there is nothing to suggest that he looked forward to any satisfying fellowship with his deceased brethren in a future life. Thus, for all practical purposes, death was a final parting.

As regards what happened to the individual when he breathed his last, death was thought of as the departure of the *nephesh* (נֶפֶשׁ), or vital principle;¹ though, curiously enough, *nephesh* is sometimes used in the sense of 'corpse' (Lv 19²⁸ 21¹ 22⁴ [all H], Nu 5⁶ 6¹¹ 9¹⁰ [all P], Hag 2¹³).

Probably various primitive views prevailed in ancient Israel as to death and the individual after death, and these views were connected with general Semitic mythology; but the editors of the OT eliminated accounts of such crude superstitions, in the interests of orthodoxy and edification, so that only a few traces remain. A familiar myth is the death and resurrection of a god. Traces of this are found in the women weeping for Tammuz (Ezk 8¹⁴). According to Gressmann,² the account of the death and resurrection of the Servant of Jahweh in Is 53 is based on some such myth; of this possibly other traces are found in the references to מָוֶלַד, 'mourning for an only son.'³

The later books of the OT contain hints of a resurrection, which develop in the later literature, especially in the Wisdom of Solomon and the Apocalypses, into an express doctrine, so that for later Judaism and for Christianity—following Judaism—death became the portal to a future life. When Judaism evolved a hierarchy of angels, with proper names and special functions, there appeared among the rest, Sammael, the Angel of Death. See **DEMONS AND SPIRITS** (Heb.) and (Jewish).

Later Judaism inherited or developed many curious fancies as to the hour of death; as, for instance, that the dying soul has a vision of the Shekinah just before its departure. Ben Kaphra, a Rabbi of the early Christian centuries, is quoted as saying :

'For three days the spirit hovers about the tomb, if perchance it may return to the body. But, when it sees the fashion of the countenance changed, it retires and abandons the body' (cf. *Expos. Gr. Test.* [1897] on Jn 11⁴).

2. Disposal of the dead.—The regular and legitimate mode of dealing with a corpse in ancient Israel was *burial*, and this has always remained the general custom of the Jews. *Embalming* was not an Israelite practice; when we read that Jacob and Joseph were embalmed (Gn 50² 26), we must clearly understand that they were treated as Egyptians, amongst whom embalming was the regular custom. In later times we are told that the body of Aristobulus was embalmed in honey (Jos. *Ant.* xiv. vii. 4). Embalming in the strict sense must be distinguished from the Jewish custom referred to in 2 Ch 16¹⁴ and in NT (Jn 19³⁹, etc.) of anointing the dead body and placing it in or wrapping it up in spices. *Cremation*, amongst the Israelites, was exceptional. According to 1 S 31¹², the men of Jabesh-Gilead burned the bodies of Saul and his sons, probably to prevent their falling into the hands of the Philistines. The fact that 1 Ch 10¹² omits the burning, and that Josephus (vi. xiv. 8) states that the bodies were buried, is probably evidence of the repug-

⁴ W. H. Bennett, *Religion of the Post-exilic Prophets*, Edinburgh, 1907, p. 361 ff.

nance of the Jews, at any rate in later times, to the cremation of the dead. The EV of Am 6¹⁰ speaks of 'he that burneth' a corpse; but the reference to burning the corpse is due to corruption or misunderstanding of the text. In some cases, however, criminals were burnt alive (Gn 38²⁴, Lv 24¹⁴ 21⁹), or their corpses were burnt (Jos 7^{15, 25}). The picture in Is 66²⁴ of the corpses of sinners consumed by fire may have been suggested by the actual treatment of dead criminals. According to Kimchi¹ there were perpetual fires in the Valley of Hinnom for consuming dead bodies of criminals and animals. In Am 2¹ the burning of the bones of the king of Edom is an outrage which calls down inexorable doom on Moab.

Exposure without burial was a disgrace and a misfortune. Criminals or their representatives might be so treated (2 S 21^{9a}), but, according to Dt 21²², even *their* corpses were to be buried. Such a misfortune might befall sinners as the judgment of God (1 K 14¹¹, Jer 7³³, Ezk 29⁵, Ps 79³). To bury relatives, and even strangers, was a supreme duty; it is specially insisted on in To 1. 2, and is illustrated by the story of Rizpah (2 S 21^{10a}). Job complains that God allows the wicked man to have an honourable burial (Job 21^{22a}). The desecration of a grave was a kind of posthumous punishment (2 K 23¹⁶, Jer 8¹⁴).

There is not much evidence in the OT of graves dug in the earth in the modern fashion, though doubtless such were often used. The labours of the various Palestine Exploration Societies show that rock-hewn tombs were exceedingly common; they usually occur in groups. A space for a single corpse is hewn in the face of a rock and closed with a stone slab; this space was called a *kūk*, קוּק (Jastrow, *Dict. of the Targumim*, 1886-1903, s.v.), by the Jews in later times. These are found grouped in one or more chambers in natural or artificial caves. One of the most interesting examples of such a burying-place is the cave of Machpelah, where Sarah, Abraham, Isaac, Rebekah, Leah, and Jacob are said to have been buried (Gn 23¹⁹ 25⁹ 49³¹ 50¹³). Masonry tombs with groups of *kūkm* are also found; and sometimes monuments were erected over tombs; for instance, Simon the Maccabee built an elaborate mausoleum at Modin for his father and brother (1 Mac 13²⁷⁻²⁹), no trace of which has yet been discovered.

In ancient times each family, like that of the patriarchs, had its own burying-place. Such burying-places would naturally be on the family estate. We read of Manasseh being buried in the garden of his own house, and Amon in the garden of Uzza (2 K 21^{18, 20}). But usually the kings of Judah were buried in a royal burying-place in the city of David: e.g. Joash (2 K 12²¹), apparently near the Temple (Ezk 43⁷⁻⁹), the Temple being in ancient times an adjunct of the royal palace. Obviously dwellers in towns, who had not extensive gardens, would be required, as in later times, to bury their dead outside the walls. Poorer people would have no family burying-place, and we read of a public cemetery, 'the graves of the *b'ne ha'am*' (2 K 23⁶, Jer 26²). Apparently a measure of disgrace attached to burial there, 'in a pauper's grave,' so to speak.

The family desired to be together in death as in life, and men were anxious to 'sleep with their fathers,' i.e. to be buried in the family tomb. It is part of the punishment of Pashhur that he is to be buried in Chaldaea (Jer 26⁶); and the Chronicler, in contradiction to the Book of Kings, states that certain wicked kings of Judah—Jehoram and Joash—were not buried in the sepulchres of the kings (2 Ch 21²⁰ 24²⁵). In post-Biblical times the Jews have had their own cemeteries. They still

retain their anxiety to be buried with their own people. Jews who are lax in many religious matters will keep the Day of Atonement in order that they may be buried in a Jewish cemetery.

A certain sanctity attached to the graves of ancient saints and heroes, and probably, as amongst the Muhammadans, such tombs became shrines; e.g. the tomb of Joseph at Shechem (Jos 24³²), and the tomb of the patriarchs at Machpelah. Necromancy and similar superstitions were often connected with graves (Is 65⁴).

On the other hand, the grave is unclean (Lk 11⁴). In later times, at least, cemeteries were supposed to be special haunts of evil spirits; and the spirits of the dead lingered there, at any rate till the corpse had been assimilated to the soil. This belief, that the spirits of the dead inhabit the tombs, is found in most primitive religions, and was probably prevalent amongst the Israelites in early times.

3. Mourning and other observances.—Numerous passages illustrate the distress caused to the Jews by bereavement: the mourning of Jacob over the supposed death of Joseph (Gn 37³⁵); of David over Absalom (2 S 18³³); Rachel refusing to be comforted (Jer 31¹⁵). The behaviour of David, who fasted and wept when his child was dying, but arose and ate when it was dead, was a puzzle to his courtiers; his explanation, that lamentation was useless, hardly seems adequate (2 S 12^{18a}).

The feelings, sentiments, and ideas called forth by death gave rise to various burial and mourning customs. Decease was and is followed by the necessary arrangements for the seemly 'laying out' of the corpse. The eyes and mouth are closed (Gn 46⁴, Jn 11⁴), and the body is washed (Ac 9³⁷). It has been supposed that the dead were, sometimes at any rate, buried in their usual dress, with their arms and ornaments; Samuel appears to the witch of Endor in his mantle (1 S 28⁴), and the dead go down to Sheol with their weapons and their 'pomp' (פִּיפֶּה). The practice certainly prevailed in later times. Thus Herod buried ornaments with the body of Aristobulus (Jos. Ant. xv. iii. 4); treasures were said to have been buried with David (xvi. vii. 1); Herod was buried covered with purple, with his diadem, crown, and sceptre (xvii. viii. 3; BJ I. xxxiii. 9). We are told that in later times such practices led to great extravagance, so that Rabbi Gamaliel II. ordained that corpses should be buried in a simple white dress. We read of Ananias, that they 'wrapped him round,' apparently in the clothes he was wearing, and carried him out, and buried him (Ac 5⁶).

Later on, the use of a shroud or special grave-clothes or wrappings for the dead became universal; but it is not clear when this custom was first introduced amongst the Jews. In Jn 11⁴⁴ Lazarus' hands and feet were bound with linen bandages (κεῖλαι), and his face with a napkin (σινδῶν). The body of our Lord was wrapped in strips of linen (δθονίαι). We have already referred to the use of spices.

Coffins were not used by the Jews in ancient times, except in the case of Joseph (Gn 50²⁶), whose remains were placed in an 'aron, or chest; but this, like his embalming, was an Egyptian custom. The Jews laid their dead on a bier (OT מִיטָה, מִיטָה, 'couch' [2 S 3²¹]; NT σκαφὴ [Lk 7¹⁴]), as is the custom amongst Eastern Jews now. They use this bier to carry the corpse to the grave, and do not bury it.

The exigencies of the climate of Palestine called for burial soon after death, on the same day, or within 24 hours. As often, a natural necessity hardened into a sacred custom, which was long maintained amongst Jews in Western countries, where the same necessity did not exist; but after

¹ Cf. Sir O. Warren, in *HDB* ii. 335.

a while it fell into disuse, and a longer interval is allowed in the West.

The carrying of the corpse to the burying-place was the work of friends of the deceased, and was the occasion of public lamentation, which, at any rate in the early centuries of our era, was partly performed by hired mourners and musicians. There does not seem to have been any formal burial service of a religious character in Biblical times,¹ but then and later funeral orations were sometimes delivered. According to *JE* (s.v. 'Funeral Rites,' v. 529), the mourners recited Ps 91 on their way to the cemetery; in the cemetery, other formulae, concluding with the *Kaddish*, or doxology; and on their return, passages from Lamentations. Women attended funerals in ancient times, and still do so amongst the foreign Ashkenazim, but not amongst the Sephardim or the English Ashkenazim.

The funeral of Herod the Great is thus described by Josephus (*Ant.* xvii. viii. 3; cf. *BJ* i. xxxiii. 9):

'The body was carried upon a golden bier, embroidered with very precious stones of great variety, and it was covered over with purple, as was the body itself; he had a diadem upon his head, and above it a crown of gold; he had also a sceptre in his right hand. About the bier were his sons and his numerous relations; next to these were the soldiery, distinguished according to their several countries and denominations; and they were put into the following order: first of all went his guards, then the band of Thracians, after them the Germans, next the band of Galatians, every one in their habiliments of war; and behind these marched the whole army, in the same manner as they used to go out to war, and as they used to be put in array by their muster-masters and centurions; these were followed by five hundred of his domestics, carrying spices.'

We may also quote the following description of modern Samaritan rites, which probably preserves many of the customs of Palestinian Jews in early times:

'Upon death the corpse is carefully and ceremoniously washed; it is not forbidden to the Samaritans, as has been frequently stated, to handle their dead, except in the case of the high-priest. Candles are burnt at the head and foot of the corpse before burial. Coffins are used—an exception in modern Palestinian custom. The mourning ceremonies last until the following Sabbath, the community going each day to the tomb, where they read and pray. On the Sabbath the community again visit the tomb, where they partake of a meal, while further appropriate services are held in the synagogue.'²

The duration of mourning has always varied, according to the rank of the deceased and his relation to the mourner. Seven days was a very common period. The men of Jabesh-Gilead fasted seven days for Saul and Jonathan (1 S 31¹³); Joseph mourned seven days for Jacob (Gn 50¹⁰); Judith was mourned seven days (Jth 16²⁴); Sir 22¹² mentions seven days as the period of mourning. In later Judaism the period of strict mourning, the *Shi'va*, lasts seven days; mourning of a less severe character lasts till the end of thirty days, and in the case of children to the end of the year.³

As to mourning-dress, the rending of garments and the wearing of sackcloth are mentioned in Gn 37³⁴ etc. We also read of garments of widowhood (Gn 38¹⁴, Jth 10³), which apparently were worn by the widow throughout her life, and consisted of, or included, sackcloth. Modern Jews usually wear black as mourning, except in Russia, Poland, and Galicia, where white is worn.⁴ Mourners rend their garments at the time of death, and wear the outer garment cut and unbound during the thirty days of mourning.⁵

The presence of numerous guests at a funeral necessitated a special meal, 'funeral baked meats,' which, in spite of the character of the occasion, was apt to become a feast. This meal is perhaps spoken of in the OT as *lehem 'onim*, 'bread of mourners' (Hos 9⁴), and was provided for the mourners by their friends at the close of the fast

which occupied the day of the funeral (2 S 3³⁵, Jer 16⁷)—a custom which seems to have prevailed ever since.¹

Other acts of mourning were fasting (1 S 31¹³), beating the breast (Is 32¹², cf. Lk 18⁴⁸), sitting in ashes (Jon 3⁶), sprinkling ashes on the head (Est 4¹). Ezk 24¹⁷ implies that mourners were wont to cover the lip and to go barefoot and bareheaded. According to Jer 16⁶, mourners mutilated themselves, and plucked out or shaved off the hair; but such practices are forbidden in Lv 19²⁸, Dt 14¹.

Traces remain in the OT of the worship of the dead, of sacrifices offered to or for them, and of furnishing them with food. Probably the later funeral feast was partly a survival of such practices. The worship of the dead was closely connected with necromancy, which was prevalent in Israel (e.g. Is 8¹⁹). The graves of ancient worthies seem often to have been shrines, as in Islām. Thus there was a *masseba*, or sacred pillar, at the grave of Rachel (Gn 35²⁰), and the important sanctuary at Shechem may have been connected with the grave of Joseph (Jos 24^{25, 32}). The interpretation of Dt 26¹⁴ is a little doubtful. The EV renders '[I have not given food] for the dead,' but the reference probably is to offering food to the dead or providing food for them. The practice was condemned by official Judaism, but persisted nevertheless. Tobit 4¹⁷ bids the Jew place food on the tomb of the righteous;² and Sir 30¹⁸ also refers to the custom.³ In some quarters necromancy and its allied customs survived among the Jews in later periods.

In Rabbinical times and among the stricter modern Jews, during the *Shi'va*, or seven days of strict mourning, the relatives abstain from work and remain at home, sitting on the floor or on a low bench, reading the Book of Job, and receiving visits of condolence. Bereaved children should abstain for a year from music and recreation.

A special feature of Jewish mourning is the repetition of the *Kaddish* by a bereaved son. According to the Jewish Prayer-book, this is to be repeated by sons for eleven months after the death of a parent, and also on the *Jahrzeit*, or anniversary of the death. It is a special form of *Kaddish* which runs thus:

'May His great Name be magnified and hallowed in the world which He created according to His will! May He establish His kingdom speedily and in the near future in your lifetime and in your days and in the lifetime of all Israel! Say ye Amen.

May His great Name be blessed for ever; may it be blessed for ever and ever!

May the Name of the Holy One (Blessed be He) be blessed and praised and glorified and exalted and set on high and honoured and uplifted and sung above all blessings and hymns and praises and consolations that are repeated in the world!

May the Name of the Lord be blessed from now even for evermore! May there be great peace from heaven and life upon us and upon all Israel, and say ye Amen. My help is from the Lord that made heaven and earth. May He that maketh peace in His high places make peace for us and for all Israel! And say ye Amen.'

This is publicly recited in the synagogue, but according to Oesterley and Box 'it is in no sense in itself a prayer for the dead, but the public recitation of it in this fashion by a son is regarded as a proof of the piety of the dead, as represented by a pious survivor.' This no doubt is the view of enlightened Jews; but others believe that the repetition of the *Kaddish* by the son shortens the purgatorial period which the father must spend in Gehenna or exalts him to a higher sphere in Paradise.⁴ The repetition terminates on the anniversary of the death, because it would be unfilial to suppose that a father's sins would require more than a

year's purgatory. In the Ashkenazic synagogues prayers are said four times a year by the bereaved for the souls of the deceased.¹

Priests were forbidden to mourn except in the case of the nearest relationships (Lv 21¹⁻⁵, Ezk 44²⁵).

4. Significance of death and of funeral customs. —Some scholars² see in many of the funeral rites, notably cutting of the hair, self-mutilation, etc., which were forbidden by the more advanced Judaism, traces of an animistic stage of the religion of Israel, of the worship of ancestors, and of the allied ideas of the continued life of the dead, of the possibility of communion with them, of the necessity of providing for their needs and protecting them from evil spirits; or, on the other hand, of the need of protecting the living from injury by the spirits of the dead. No doubt the Semitic peoples passed through a stage of religious development when such ideas were current; and these ideas persisted and do persist when they have been outgrown by the purer forms of religion; but they do not belong to Jahwism or to Judaism so far as either was or is dominated by revelation. Nevertheless, the great importance attached to burial in the last centuries of the pre-Christian era suggests that the condition of the spirit of the deceased was supposed to be influenced by the treatment of the corpse. Later on, in some districts the habit prevailed of visiting cemeteries in order to obtain the help or intercession of the dead.

Another quasi-animistic explanation of mourning rites which involve disfigurement, unattractive dress, covering the head, etc., is that they were intended to prevent the spirit of the dead man from recognizing the mourner, and so to protect the latter from any injury the spirit might wish to inflict upon him. Similarly, the mourners' shrieks were intended to drive the spirit away; and satisfactory burial was necessary in order that the dead might find their way to Sheol and stay there. The suggestion that many mourning rites were due to the anxiety of the mourner to humble himself before God³ hardly seems probable. The most obvious explanation is that mourning arose out of a natural desire to express the emotions caused by bereavement. Such distress gives rise to wailing, frantic gestures, neglect of the dress and person, an aversion to the pleasures of life. Acts which were originally spontaneous would soon harden into a fixed etiquette or ritual. Many customs might easily be thus explained; and it is possible that this may be the true explanation, even in cases where a mourning custom does not seem to us a natural expression of grief. A man distraught by sorrow may seek relief in any unexpected, strange, unusual act; such an act may appeal to the imagination of spectators by its very strangeness, and be imitated till it becomes a custom.

The contagious uncleanness of a corpse (Nu 5⁷, Lv 21¹¹) might be suggested in many ways: by the fear of the spirit of the dead man mentioned above, by the natural shrinking from an object so changed from the living friend or kinsman, and even by sanitary reasons. The uncleanness of the corpse would naturally be extended to the tomb. In the same way an unburied corpse defiled the land and brought down a curse upon it (Dt 21²²). It would be a mistake to try to explain all the mourning customs, even of one people, by the consistent application of a single principle. Bereavement affects men in many ways, so that natural affection, practical considerations, superstition,

and religion all contribute to give rise to the ritual connected with death. Moreover, a rite changes its significance and value from time to time, so that the meaning attached to it in later times may be quite different from that which it had originally, and the popular explanation of it may throw no light on its origin.

According to Gn 3, death was a consequence of the sin of Adam and Eve (cf. Ro 5¹²); it would be natural to draw the conclusion arrived at in the latter passage, that henceforth each man died because of his own sin (a view perhaps implied by Nu 27³).¹ But the narrative in Genesis stands apart from the general course of OT thought, which regards death as the natural end of life. The righteous man, according to a widely prevalent view, enjoys a long and happy life, and is gathered to his fathers in a good old age. Some passages of the Wisdom Literature, even apart from any belief in a real future life, regard life as a burden and death as a boon (Job 7^{15, 16}, Ec 1^{2, 4, 5}).

In some passages of OT, death is personified (e.g. Job 28²², Is 28¹⁸, Hab 2⁵). In others the term is extended to mean spiritual death; it doubtless includes physical death, but only as a part of a wider judgment which also involves separation from God and exclusion from the Kingdom. In such passages, as Schultz said, 'death includes everything which is a result of sin.'² This usage of the term is extended and developed in the later literature. Thus Philo: 'The death of the soul is the decay of virtue, the taking up of evil.'³

In later Judaism, death is regarded as atoning for the sin of the deceased. According to a popular superstition, the dead man suffers pain while his body is decaying in the grave, and this pain has an atoning value. But, apart from such ideas, we find the doctrine taught by Rabbinical and other authorities. Thus the Sephardic ritual for a dying man includes the following:

'Let my death be an atonement for all my sins, iniquities, and transgressions, wherein I have sinned, offended, and transgressed against Thee, from the day of my first existence; and let my portion be in the Garden of Eden.'⁴ Again we read: 'The Day of Atonement and death make atonement when accompanied with sincere repentance.'⁵

W. H. BENNETT.

DEATH AND DISPOSAL OF THE DEAD (Muhammadan).—According to the Qur'an, 'every soul must taste of death' (iii. 182); the difficulty as to those who may be alive at the Last Day is got over by the explanation that on the blast of the trumpet all 'shall expire, except those whom God pleases' (xxxix. 68), the exempted being possibly some of the greater angels (Baidāwī, etc., in *loc.*). Further, it is laid down that the exact hour of each person's death is foreordained (xvi.

¹ Küberle, *Sünde und Gnade*, 334; but probably the passage regards Zolophehad as involved in the sin of Israel in refusing to enter Canaan from Kadesh.

63). In the traditions, men are forbidden by the Prophet to wish for death, though to a believer it will be desirable. Whoso's last words are the *Kalima* (profession of faith, 'There is no god but God') will enter into paradise; and it is directed that this shall be recited in the presence of the dying, and the *Sūra Yā Sin* (Qur. xxxvi.) should be said over the dead. A fantastic tradition, given on the authority of Abū-Ḥuraira, relates what Muhammad is supposed to have said about the passing of the soul. In the case of a believer, angels of mercy clad in white come and invite the soul to the rest which is with God, and the soul comes out with a delicious smell of musk, which the angels sniff with satisfaction; the soul is handed on from angel to angel, till it reaches the souls of the faithful, who rejoice and question it about those left behind on earth. But angels of wrath come to the dying infidel, and his soul departs with a bad smell, which disgusts them, and they bring it to the souls of the infidels. This idea is elaborated in other traditions, in which the soul of the righteous is said to issue forth like water from a skin, and the angel of death seizes it; but the angels in white snatch it from him and wrap it in a shroud with an odour of musk, and convey it on and on to the seventh heaven, where the believer's name is registered, after which it is returned to its body on the earth, to undergo the questioning of the grave. But the dying infidel is visited by black-faced angels, and the soul is drawn out like a hot spit out of wet wool which sticks to it, and is wrapped in sackcloth, smelling fetidly; and its name is written in hell (*sijjin*); and it is violently thrown down upon the earth, to be examined by the angels of the grave, as will be described later.

Meanwhile the body is treated with a ceremonial which varies little in different parts of the Muslim world, and is nearly the same for men and women. Precedents for most of the ritual are traced to traditions of the Prophet; but two customs—the wailing of women and the recital of praises of the dead—are observed in direct defiance of his commands. The dying man is turned to face the *qibla*, or direction of Mecca, and, as soon as his eyes are closed in death, the surrounding men ejaculate pious formulæ and the women raise cries of lamentation (*walwala*), the family calling upon the dead in such terms as 'O my master!' 'O my resource!' 'O my camel!' 'O my misfortune!' The clothes of the deceased are instantly changed, his jaw bound, and his legs tied; and he is covered with a sheet. Women friends, and sometimes professional 'keepers' (*naddāba*), with tambourines, join the mourners and cry, 'Alas for him!' If he was one of the *ulamā* of Cairo or some man of mark, his death would be announced from the minarets in the call known as the *Abṛār* (from Qur. lxxvi. 5-9). The lamentations go on all night, if the death occurred in the evening, and a recitation of the Qur'an by hired *fiqīs* takes place; but, if the death occurred in the morning, the burial follows on the same day, as, in addition to the rapid decomposition in a hot climate, there is often a superstitious dread of keeping a corpse all night in the house. The washing of the dead is done by a professional washer (*mughassāl* or *ghassāl*), male or female according to the case, who brings a bench and bier, and does the work, often in a courtyard, with much reverence and decency, and with care in the disposal of the water, which people fear to touch; while the *fiqīs* continue chanting in the next room. After a very elaborate washing, the nostrils and other orifices are stuffed with cotton, and the corpse is sprinkled with camphor, rosewater, and lote leaves (*nabq*), the feet tied together and hands laid on breast, and the grave clothes (*kafan*) put

on according to precise rules. Those vary from two or three pieces of cotton (or five for a woman), or a mere sack, in the case of the poor, to a series of layers of muslin, cotton, silk, and a Kashmir shawl, among the rich; and the fashions vary in different lands. Women usually have a long shift (*yalak*) added, and in India a coif (*damnī*). White and green are the favourite colours for the *kafan*, or any colour but blue, but white alone is allowed in India. A shawl is thrown over the body when placed on the bier (*janāza* or *ṣandūq*). There is no coffin, and, of course, no priest.

The funeral or procession varies in different countries. In India, women do not attend as a rule, but they do in Bukhārā. In Egypt the cortège is often preceded by half a dozen poor men (*yamanīya*), blind by preference, walking in pairs and chanting the *Kalima*. After them come the male friends and relations, and perhaps some darwishes, especially if the deceased belonged to a darwish order. A few schoolboys follow, carrying a Qur'an on a desk, and chanting lively verses on the Day of Judgment and similar topics. Then comes the bier (which for women and children has a post [*shāhid*] at the head, covered with a shawl, and often adorned with gold ornaments, or, in the case of a boy, surmounted by a turban), carried head foremost at a brisk pace by friends, who relieve each other in turn. It is an act of merit for any passer-by to lend a hand or to follow the bier; and the Prophet made a point of always standing up when a bier was passing, and saying a prayer. The women walk behind the bier, with dishevelled hair, keening and shrieking, and the hired mourners swell the chorus and sound the praises of the dead, contrary to the Prophet's will. Blue headbands and handkerchiefs distinguish the women relations, who slap their faces and sometimes smear them with mud. There are some variations in the procession when the deceased is a woman. Rich people add camels to the procession, and hire *fiqīs* to chant chapters of the Qur'an on the march, or members of religious orders carrying flags; and also sacrifice (*al-kaffāra*) a buffalo at the tomb for the benefit of the poor; whilst ladies riding the high ass often follow their female relations. If it be a saint (*walī*) who is being buried, the women raise joy-cries (*zaghārī*) instead of *wilwāl*, or keening; and, if these cries cease, the bier stops too; for saints are believed to be wilful and able to stop their bearers, and even to direct them to where they prefer to be buried. It is said to be useless to try to rush a saint's bier in a direction he does not like, but the somewhat bizarre device of turning the bier round rapidly several times has been found successful in confusing the corpse's sense of orientation (Lane, *Mod. Eg.*⁵ p. 518).

The ceremony at the mosque consists in laying the bier on the floor, right side towards Mecca, when a service of prayer is recited by an *imām* and his attendant *muballigh*, in the presence of the congregation of mourners and all who choose to attend, ranged in a prescribed order, ending with an appeal to the audience: 'Give your testimony concerning him,' and their reply: 'He was of the righteous.' The *fiqīs* may then recite the *Fātiḥa*, etc., and the funeral goes on to the graveyard.

There a tomb has been prepared, of ample size, with an arched roof, so that the corpse may sit up at ease to answer the interrogatory of the examining angels, Munkar and Nakir, who will enter the tomb to question him as to his orthodoxy. If the replies are satisfactory, the grave will be enlarged to him, and a man with a beautiful countenance will appear to tell him: 'I am thy good deeds'; otherwise, a hideous face comes to represent

his evil deeds, and painful experiences ensue. The fear of 'the torment of the grave' is very real among Muslims.

The construction of tombs varies in different places, and no one pattern can be indicated. In Egypt, the entrance is at the foot, the side furthest from Mecca, and the tomb is often made to hold several bodies; but, if they are of opposite sexes, a partition is set up. Over the tomb is an oblong stone slab or brick monument (*tarkiya*), with an upright stone (*shāhid*) at head and foot. The inscription is on that at the head, which is often carved with a turban. A small chapel covered with a cupola is frequently built over the tombs of saints and other distinguished people, while the tomb-mosques of sultans and amirs are often beautiful examples of Saracenic art.

The body is lifted out of the bier and laid in the tomb, on its right side, with the face towards Mecca, propped in that position by bricks. Its bandages are untied, its Kashmir shawl rent, lest it should tempt grave-robbers, a little earth is sprinkled, ch. cxii. of the Qur'ān, or xx. 57, is recited (but this was forbidden by the Wahhābīs and others), and the entrance is closed. There is no service at the grave; but, before leaving (unless the funeral be of a Māliki), a *fiqī*, in the character of *mulaggin*, or tutor of the dead, sits before the tomb and tells the defunct the five correct answers to be given to the examining angels that night (the 'Night of Desolation,' *Lailat al-waqsha*) when they come and ask him his catechism: he must reply that his God is Allāh, his prophet Muḥammad, his religion Islām, his Bible the Qur'ān, and his *qibla* the Ka'ba. The grave is left in solitude and the mourners depart, saying a *Fātiha* for the defunct and another for all the dead in the cemetery. Some *fiqīs* take a repast in the room where the deceased died and recite ch. lxvii. of the Qur'ān, or perform the more elaborate ritual called the *Sabha*, 'Rosary,' in which a rosary of a thousand beads is used to count the thousands of repetitions of the *Kalima* and the hundreds of other formulæ repeated. This performance ends with one of the *fiqīs* asking the others: 'Have ye transferred [the merit of] what ye have recited to the deceased?' and their answer: 'We have transferred it.'

Wailing is resumed by the women on the Thursdays of the first three weeks after the burial, and the men receive friends of the deceased in the house and hire *fiqīs* to perform a *ḥatma* of the Qur'ān; and on the Fridays following these three Thursdays the women visit the tomb and go through various rites, including the placing of a broken palm branch on the tomb and giving food to the poor; and the same is done on the Thursday and Friday completing or following the forty days after the funeral. Men do not display mourning in their dress, but women dye their veils and other gear dark blue, and sometimes smear the walls of their rooms, and even stain their hands and arms with the same indigo dye. They also disarrange their hair, and the furniture and carpets are upset in mourning for the head of the house.

LITERATURE.—The most minute account of all the ceremonies and processes used in regard to the disposal of the corpse is to be read in G. A. Herklots and Ja'far Sharif's *Qanoon-e-Islam*, London, 1832, ch. xxxviii.; the ceremonies after the funeral are described in ch. xxxix.; but a good deal of this account consists of details peculiar to the Muslims of Hindūstān. The corresponding ceremonies observed in Egypt are described in Lane's *Modern Egyptians*, London, 1860, ch. xxviii., where also is a notice of a curious dance performed on the occasion of a death by the peasants of Upper Egypt. The Egyptian customs are similar to those observed in Syria and Turkey, though local differences of usage are to be noticed, a fairly detailed account of which for Turkey may be read in *The People of Turkey*, ed. S. Lane-Poole, London, 1873, ii. 136-143. See also Hughes' *DI*, London, 1835, s.v. 'Burial' and 'Death,' where Herklots is conveniently abridged. The traditions of Muḥam-

mad on the subject are accessible to English readers in *Miškāt al-Masābīh*, tr. Matthews, Calcutta, 1860, vol. I. pp. 355-403. STANLEY LANE-POOLE.

DEATH AND DISPOSAL OF THE DEAD (Parsi).—I. Before death.—When death approaches, one or two priests are summoned to make the dying person confess his sins. The *Patet*, or confession of sins, is recited for his benefit, and it is a meritorious act if he is able to join the priest in repeating the confession. According to the *Sād Dār* (xlv.), the man who 'accomplishes repentance' does not go to hell, but, having received his punishment at the end of the Chinvat bridge, is led to his place in heaven. In a case of urgency the short *Ashem-Vohū* (Ys. xxvii. 14) formula may suffice, and the Hātōkht Nask fragment (Yt. xxi. 14 f.) attributes a special value to the recital of *Ashem-Vohū* in the last moments of life. The *Sād Dār* adds (lxxx. 11) that it brings one who has deserved hell to the *Hamistakān* (the 'ever stationary' region between heaven and hell); one who has deserved the *Hamistakā* to heaven; and one who has deserved heaven to the highest paradise. The *tanu-peretha*, after whose death the *upaman*, 'waiting,' 'mourning,' of the relatives must be prolonged beyond the usual period (*Vend.* xii.), is explained by tradition as one who has died without *Patet* and without *Ashem-Vohū*. Sometimes a few drops of the consecrated *haoma* juice mingled with water are poured, if possible, into the mouth of the dying person, *haoma* being believed to produce immortality. Formerly this custom was more common; and it was also usual to drop into the mouth of the dying person a few grains of pomegranate, belonging to the holy ceremonies of the Parsi sacrifice.

2. Death.—According to *Vend.* v. 10, the ancient Zarathushtrians had special chambers or buildings (*kata*) for the dead—one for men, one for women, and one for children—in every house or in every village, and the common mortuary still exists amongst the Zarathushtrians of Persia and in the Mofussil towns of Gujārāt. In Bombay and other parts of India a special place in the house is prepared beforehand and washed clean in order to receive the dead body. The body is bathed all over and covered with a clean, but worn-out, white suit of cotton clothes, which must be destroyed and never used again after having served for this purpose (cf. *Vend.* v. 61, viii. 23-25). A relative girds the sacred cord round the body, reciting the *Ahura Mazda Khudāi*, a short prayer in Pazand. The corpse is placed on the ground on a clean white sheet. Two relatives sit by his side keeping themselves in contact with him—a custom probably derived, like the *paivand* (see below) held by the watchers and the bearers of the corpse, from the idea of forming a bridge or a way for the soul. An *Ashem-Vohū* is recited close to the dead man's ear.

3. Impurity of the corpse.—The corpse is now supposed to be assailed by the corpse-demon, the *Druj Nasu*. According to *Vend.* vii. 1-6, the *druj* of the corpse rushes on the body from the north, in the shape of a fly, immediately after death in a case of natural death. But in a case of violent death (by dogs, or by the wolf, by the sorcerer, by an enemy, or by the hand of man, by falling from a mountain, by strangling oneself, or by treachery) the demon comes only in the *qāh* (one of the five divisions of the day) that follows after death. Only special despised officials, set apart for that purpose, are allowed actually to touch the body, and they must scrupulously observe certain fixed rules. If any one else happens to touch it, the contagion spreads to him, and he must undergo the great purification, *dar*

ashnūm, for nine days (being washed with the urine of the cow, etc. [*Vend.* ix.]). The glance of a dog (see below) or other animal is considered to be particularly effective for driving away the corpse-demon.

In theory the old tabu ideas concerning the dead have been modified in a characteristic manner by the Avestan dualism. Thus, since the death of a Mazdayasnian implies a victory of the Evil Power, his body is unclean, but the corpse of an unbeliever is clean, because his death favours the cause of Ahura Mazda, and a wicked man defiles only during his life, not after his death (*Vend.* v. 36-38).

4. Isolation of the corpse.—The place of the two relatives waiting beside the body is next taken by the *nasu-kashas* of the Avesta, now called *khāndhya* ('shoulder-men') by the Parsis of India. Two of those funeral-servants prepare themselves by washing and by putting on clean suits of clothes and the sacred cord, and by reciting the *Srōsh-bāj* (on which see Darmesteter, *Le Zend-Avesta*, ii. 686-688) up to the word *ashahe*. They then enter the room where the dead body is placed, keeping between them a piece of cloth or cotton tape—the *paivand*. They cover the body with cloth except the face—which, however, in some parts of Gujarāt is also covered—with a *padān* (the *paitidāna* of the Avesta, a piece of white cotton stuff which the Parsi priest holds before his nose and mouth in order not to defile the sacred fire and the other pure things). Then the two *khāndhyas* lift the corpse on to slabs of stone placed in a corner of the room, its arms being folded across the chest. The face must not be turned towards the north, whence the demons proceed. In some districts of Gujarāt the old Avestan rule (*Vend.* viii. 8) is still observed of laying the body on a thin layer of sand in a cavity dug in the ground five inches deep, while in Yezd the corpse, after being lifted from the bier in the common mortuary, is placed 'on a raised platform of mud paved with stone, about nine feet long and four feet wide' (Jackson, *Persia*, p. 391). The place in which the body reposes is ritually separated from connexion with the living by three deep circles, *kasha*, drawn with a metallic bar or nail by one of the two *khāndhyas*, who afterwards leave the house, still making *paivand*, and finish their *Srōsh-bāj*.

5. The sag-did.—If possible, 'a four-eyed' (*cath-rucashma*) dog, i.e. a dog with two eye-like spots above the eyes, is now brought near the corpse in order to frighten the *druj* by his look, i.e. the *sag-did* ('dog-gaze') is arranged. According to *Vend.* viii. 16, a white dog with yellow ears has also a particular power against the demons, but any dog may suffice. The *sag-did* is repeated at the beginning of every *gāh*, until the body is carried from the house. The prescription of *Vend.* viii. 14-18 seems not to be observed nowadays, namely, that a yellow four-eyed dog or a white dog with yellow ears must be led three times if he walks willingly, six or nine times if he is unwilling, along the road where a corpse of a man or of a dog is carried, in order to scare away the corpse-demon. In Yezd the ordinary street-dog is used, and 'morsels of bread are strewn around the corpse, or, according to the older usage, laid on the bosom of the dead, and the dog eats these' (Jackson, *op. cit.* p. 389). Immediately before entering the *dakhma* ('tower of silence'), the dead body is once more exposed to the *sag-did*. The demon-expelling glance is attributed by *Vend.* vii. 3. 29 f., viii. 36, not only to the dog, but to 'the flesh-eating birds' as well as to 'the flesh-eating dogs.'

Those passages evidently refer to the moment when the animals, to which the body is exposed, rush on it to devour

it; but the eminent Parsi scholar J. J. Modi, to whom we principally owe our knowledge of the actual funeral ceremonies of the Parsis, interprets *Vend.* vii. 3 in the following way: 'It is enjoined that in case a dog is not procurable, the "Sagdeed" of flesh-devouring birds like the crows and vultures should be allowed, that is to say, it will do if a flesh-eating bird happens to pass and sees the corpse from above or if the flesh-eating birds fly in that direction' (*JASB* ii. 414).

6. Demon-frightening fire.—We return to the mortuary room, where, after the first *sag-did*, the demon-killing fire (*Vend.* viii. 80) is brought and fed with fragrant sandal-wood and frankincense, and where, until the body is removed, a priest recites the Avesta, keeping himself, as well as every other person, at least three paces from the dead body (*Vend.* viii. 7).

7. Time of removal.—The removal of the body must take place in the daytime, in order to expose it to the sun (*Vend.* v. 13). In ancient times the corpse might lie in the special mortuaries as long as one month or even until the next spring (*Vend.* v. 12). Now, in India, the body is removed the next morning, if death takes place early in the night; if a person dies late at night or early in the morning, the body is removed in the evening. In case of death by accident the body may wait longer.

8. Removal.—Two 'corpse-bearers' (*nasā-sālārs*), clothed in white, with 'hand-cover' (*dastānā*) on their hands, and making *paivand*, enter the house about one hour before their departure to the *dakhma*, carrying an iron bier (*gāhān*). They must be at least two in number (*Vend.* iii. 14), for a single man is not allowed to carry even the body of a child. Wood being more liable to infection, the bier must be of iron. It is placed beside the body. The corpse-bearers read the *Srōsh-bāj* up to the word *ashahe* (the remaining portion of that prayer is recited only when their operations relating to the corpse are finished), and add in a low voice: 'According to the dictates of Ahura Mazda, the dictates of the Amshasponds, the dictates of the holy Sraosh, the dictates of Aderbād-Mahrespond, the dictates of the Dastur of this time.' Then they sit silent, while two priests, having performed the *kosti* (cf. Darmesteter, *op. cit.* 685 f.) and repeated the special prayers of the *gāh*, enter the chamber, making *paivand*, put on their face-veils, 'take the *Srōsh-bāj*' (i.e. repeat it as far as *ashahe*), and commence the Ahunavaiti *Gāthā* (*Ys.* xxviii.-xxxiv.), keeping themselves near to the door or at least at a distance of three paces from the corpse. At the words of *Yasna* xxxi. 4: 'Seek thou for me, O Vohu Manah, the mighty Kingdom, through whose increase we may overcome the Druj,' they stop; the corpse-bearers lift the dead body on the bier, when the priests turn to the dead and finish the *Gāthā*, after which a new *sag-did* is performed. The moment is now come for relatives and friends, who have gathered in the house (or, in Yezd, in the common mortuary, the *zād-ō-marg*, 'birth and death,' or *pursish-khānah*, 'inquiry house'), to have a last look at the deceased. They bow before the body, i.e. make the *sejdo*, before its face is covered up.

9. Funeral procession.—Having carried the body outside the house (according to *Vend.* viii. 10, the corpse should be removed through a breach specially made in the wall of the house, and in this connexion it is worthy of note that the Persian *zād-ō-marg* has two doors, the corpse being brought in by the one and carried out by the other), the *nasā-sālārs* entrust the bier to two or more *khāndyas* (who are also sometimes called *nasā-sālārs*) to bear it to the 'tower of silence.' Two priests walk in the front of the procession, at a distance of thirty paces after the bier, accompanied by relatives and friends, two abreast, clothed in white and making *paivand*. In Persia, however, the order

is different. There the procession is led by a man bearing a vase containing fire (and formerly also by a musician playing a doleful air), followed by the relatives and friends, the corpse, the priests, and additional members of the family of the deceased. Here, too, if the *dakhma* is far distant, the body may be conveyed on a cow or donkey (cf. the Pahlavi commentary on *Vend.* iii. 14), and the mourners may ride, though the priests are required to walk.

10. In the tower.—At the gate of the tower the bier is set down, the face is uncovered to let the accompanying procession pay their last respects to the dead from a distance of at least three paces, and once more the *sag-did* is performed. Now the two real *nasā-sālārs*, who had arranged the body on the bier in the house, and who alone are allowed to enter the tower (not wearing their usual clothes [*Vend.* viii. 10], but the so-called 'clothes of *dakhma*'), open its gate, which is closed with an iron lock, lift the bier, carry it into the tower, place the body, with the head toward the south (the auspicious quarter), on one of the beds of stone (*kesh*) arranged in concentric circles, rising like an amphitheatre, which are intended for receiving the bodies. These circles are separated by canals (*pavis*, a word which seems also to be used of the sections divided by the canals). They remove the clothes from the corpse, leaving it naked (*Vend.* vi. 51), and cast them into the central well, forming the middle of the tower, and surrounded by the amphitheatre-like circles of stone beds. The naked corpse may be left 'on the earth, on clay, bricks, and stone and mortar.' The vultures, Nature's scavengers, are already waiting, and in one or two hours they devour all that is corruptible of the body. Twice a year the *nasā-sālārs* throw the skeletons into the well, where sun, rain, and air soon reduce the whole to dust. The *Dinkart* to *Vend.* v. 14 considers the falling of the rain on the corpses in the *dakhmas* and on the impure liquids as a great advantage. Formerly the bones were preserved in an ossuary.

'Whither shall we carry the bones of the dead, Ahura Mazda? Where shall we place them?' Ahura Mazda answered: 'You may make a structure (*uz-dānem*) for them beyond the reach of the dog, of the fox, of the wolf, inaccessible to the rain from above. If the Mazdayasnians are rich, they may construct it of stones, of plaster, or of earth. If they are not rich, they may place the dead on the ground in the light of heaven and looking towards the sun' (*Vend.* 49-51).

If, in Persia, a Zarathushtrian community is too small to support a *dakhma*, the body 'is carried to some remote place in the hills or mountains, is then piled around with stones and covered with a slab, but not interred' (Jackson, *op. cit.* p. 394).

The *Dādistan* (xviii.), in the 9th cent. A.D., recommended collecting the bones and putting them in an *astōdān*, elevated above the ground and covered with a roof to preserve them from rain and from animals. These receptacles to protect the bones from the sun were made of two excavated stones, one forming the coffin, the other the cover. They might also be real monuments, perhaps corresponding to the caves of the Achæmenians at Naksh-i Rostam (Modi, 'An old Persian Coffin,' *JASB*, 1888; cf. Darmesteter, *op. cit.* p. 93, note 34). At the present day the bones of the dead are no longer preserved.

Vend. vi. 45, in directing the dead to be carried 'to the most elevated spots, where flesh-eating dogs and flesh-eating birds may most surely perceive it,' gave sanction to a primitive method of disposing of the dead, still practised, e.g., by the Kāfirs, who expose their dead in wooden coffins on the tops of the mountains (Lassen, *Ind. Alterthumskunde*, I. 2, Leipzig, 1857, p. 520), by some wild tribes of India (Crooke, *JAI* xxviii. [1890] 245 f.), and by the Masai, where a person dying without children is abandoned, some hundred yards outside the kraal, to the hyenas, whose speedy devouring of the corpse is considered a favourable sign (Merker, *Die Masai*, Berlin, 1904, p. 193). The Hawaiians threw their dead to the sharks, etc. (Segerstedt, *Le Monde oriental*, Upsala, 1910, iv. 2, p. 64). According to Strabo (p. 617; cf. Kleuker, *Anhang zum Zend-Avesta*,

Riga, 1783, n. III. 71 f.), the Bactrians threw their sick and aged people to dogs, trained to devour them; the Caspians considered it more auspicious if birds devoured their dead exposed in the desert than if they were eaten by dogs or wild animals (cf. Marquart, *Philologus*, Suppl. x. [1907] i. 141).

11. *Dakhmas*.—Special constructions or towers (*dakhmas*), for exposing the corpses, are well known to the Avesta. They constitute the most awful and impure spots on the earth, and it is one of the greatest merits to demolish them when they have served their purpose, and thus restore the ground to cultivation (*Vend.* iii. 13, vii. 49-55). The construction of the actual 'towers of silence' used by the Parsis of India is accompanied by a series of religious ceremonies, the consecration lasting three days (Menant, *Les Parsis*, Paris, 1898, pp. 206-235, with plans and illustrations).

12. Dispersion of procession.—At every *dakhma* a kind of chapel (*sāgrī*) is built, to which the funeral procession retires while the *nasā-sālārs* do their work with the dead inside the tower. When the *nasā-sālārs* are ready, the assistants, gathered in the *sāgrī* or seated at some distance from the *dakhma*, get up and finish the *Śrōsh-bāj*, which they had commenced before starting in the funeral procession. In concluding the *paivand* they recite this prayer: 'We repent of all our sins. Our respects to the souls of the departed! We remember here the fravashis of the pious (departed).' They then take urine of the cow, wash the naked parts of their bodies, make the *kosti*, and repeat the *Patet*, mentioning the name of the departed at the end of the prayer, after which they return home and take a bath.

13. Ceremonies at home.—At home, immediately after the removal of the body, urine of the cow (*nīrang*) is sprinkled over the slabs of stone on which the corpse was placed, and upon the road by which it was carried out of the house. All clothes, utensils, and other articles of furniture must be cleansed, principally by the same means—*gōmēz* (urine of the cow) and water—or rejected altogether, if they have come into any contact with the dead body. After the removal of the body, all the members of the family are required to take a bath.

In an ancient Iranian province, Harōiva (Harāt), the custom recorded from later times (Chardin, *Voyages en Perse*, Amst. 1735, iii. 109), of abandoning the house to the dead, seems to have prevailed according to the *vish-harezana* of *Vend.* i. 9 (cf. N. Söderblom, *RHR* xxxix. [1899] 256 ff.). The *Great Bundahishn* gives the following explanation of this custom: 'We keep the prescriptions (of removing the fire, the *barashnūm*, the cups, the *haoma*, and the mortar) during nine days (in the winter) or a month (in summer)' (cf. *Vend.* v. 39 ff.). 'They abandon the house and go away during nine days or a month' (Darmesteter, *op. cit.* p. 9, note 20). It may be that *upaman*, 'waiting' (*Vend.* v.) originally meant a temporary abandoning of the house. At present, in Bombay, all the members of the family have to take a bath after the removal of the body, and fragrant fire is burnt on the spot where the corpse was laid. During nine days in winter and one month in summer a lamp is kept burning on the same spot, and no one is allowed to go near it during that period. After its expiry the whole room is washed. The members of the family and also near friends abstain from meat during three days after the death.

We do not deal here with the festivals and gifts intended for the priest and for the poor after the death of a wealthy Parsi, or with the recital of several offices for his soul (see *UNWOLATARY* [Parsi]). The funeral expenses of an eminent Parsi gentleman who died in 1763 amounted to more than 723 rupees, which would mean more than double this sum at present (Bomanji Byramji Patell, *JASB* III. 144 f.).

14. Recent opposition.—In some circles of Parsi society the question of introducing a more hygienic

and less savage manner of disposing of the dead has of late been very eagerly agitated. Both burning and burying being prohibited because of the purity of fire and earth, it has been proposed to consume the corpse by electricity, and the exegetical question has been discussed whether such a method can be considered as burning or not. No change has been officially permitted as yet in the disposal of the dead, which shows the tenacity of custom, and maintains continuity with an immemorial antiquity.

LITERATURE.—J. J. Modi, 'On the Funeral Ceremonies of the Parsees, their Origin and Explanation,' in *JASB* ii. (1892); J. Darmesteter, *Le Zend-Avesta*, ii. 146 ff., Paris, 1892; D. Menant, *Les Parsis*, Paris, 1898; D. F. Karaka, *Hist. of the Parsis*, i. 192 ff., London, 1884; A. V. W. Jackson, *Persia Past and Present*, pp. 387-394, London, 1906; Khudayar Sheheryar, 'A Zoroastrian Death in Persia' (in Gujarati), in *Zartosthi*, i. 169-181.

NATHAN SÖDERBLOM.

15. Ancient Persian rites.—In ancient Persia, before the spread of Zoroastrianism, the means of disposal of the dead were quite different from those observed by the adherents of the great Iranian religious leader. Attention has already been called, in § 10, to the Bactrian custom of leaving the sick and the aged to be devoured by dogs—a practice recorded not only by Strabo (p. 517), but by Cicero (*Tusc. Disp.* i. 45) and by Eusebius (*Præp. evang.* i. iv. 7). Both Herodotus (i. 140) and Strabo (p. 735) expressly state that, while the Magi exposed their dead to dogs or birds (as the Avesta enjoins), the Persians interred the dead body after coating it with wax (*κατακρήσαντες δὲ ὡν τὸν νέκυν Πέρσαι γῆν κρύπτουσι*). It was, therefore, rank blasphemy (*οὐχ ὅσια*) when Cambyzes ordered the corpse of Amasis to be cremated (Herodotus, iii. 16); and it is very doubtful whether any credence can be given to Xenophon's account (*Cyropæd.* viii. vii. 25) of the request of the dying Cyrus—'Put my body, my children, when I die, neither in gold nor in silver nor in anything else, but commit it to the earth as soon as may be (*τῇ γῇ ὡς τάχιστα ἀπδοτε*). For what is more blessed than this, to be mingled with the earth (*γῇ μυχθῆναι*)?'—since this last phrase would seem to exclude any coating of the body with wax. Equal suspicion seems to attach to Xenophon's story (*ib.* vii. 3) of the death of Abradates, for whom a grave was prepared, and whose dead head was held on her lap by his wife, whose corpse, after her suicide, and his were both covered over by her nurse before burial. Ctesias, however, who is much more reliable than his ancient contemporaries would allow, may be right when he states (*Pers.* 59) that Parysatis buried the head and right hand of Cyrus the Younger, for here the wax coating may perhaps have been employed.

Unfortunately, our sole information on this subject must thus far be gleaned from the meagre statements of the classics. If we may judge from the tombs of the Achæmenians, their bodies were not exposed as Zoroastrianism dictated; but it is by no means impossible that they were coated with wax, or even, as Jackson also suggests (*Persia Past and Present*, p. 285), 'perhaps embalmed after the manner of the Egyptians.' According to Arrian (*Anab.* vi. xxix. 4-11), the body (*σῶμα*) of Cyrus was laid in a coffin of gold (*πέλεκιν χρυσοῦν*; cf. Jackson, *loc. cit.* and p. 304 f., for further references).

All this was, of course, changed when Persia definitely became Zoroastrian. In his account of the obsequies of Mermeroes († A.D. 554), Agathias (*Hist.* ii. xix. 22) recognizes only the usage of the Avesta (with the addition of the exposure of the sick while still living), and he expressly says that the Persians could not place the dead in a coffin (*θήκη*) or urn (*ἀδρακι*), or bury in the earth (*τῇ γῇ καταχωρῆναι*); and the 5th cent. Sasanian monarch

Kobad demanded, though without success, that the Christian Iberian ruler Gurgenes should adopt the Persian custom of exposing the dead to birds and dogs, instead of burying them (Procopius, *de Bell. Pers.* i. 12).

LITERATURE.—In addition to the works mentioned in the previous section, reference may also be made to Kleuker, *Anhang zum Zend-Avesta*, ii. iii. 91., 571., 144, Riga, 1783; Brisson, *de Regio Persarum principatu*, ed. Lederlein, p. 619 ff., Strassburg, 1710; Rapp, *ZDMG* xx. [1866] 63-66.

LOUIS H. GRAY.

DEATH AND DISPOSAL OF THE DEAD

(Roman).—As in other lands and in other times, so also among the ancient Romans the customs attendant upon death and burial varied so considerably according to wealth, rank, occupation, nationality, religion, place, and period that no single succession of circumstances may be taken as typical, and great caution must be exercised in dealing with the scattered and fragmentary evidence on the subject, in order to avoid confusing the particular with the universal, or attributing to one period the customs peculiar to another.

The greater part of our evidence having to do with the upper classes during the late Republic and early Empire, it will be best to re-construct, as a nucleus around which to build up an account of burial customs in general, a typical instance of the death and burial of a Roman grandee of the 1st cent. of the Empire.

As the man breathes his last, the assembled relatives loudly and repeatedly call out his name in the *conclamatio*—a more or less formalized expression of grief which is probably reminiscent of primitive attempts to wake the dead back to life; and perhaps the nearest of kin kisses him, as if to catch and preserve in the family line the last breath. After the formal announcement '*conclamatum est*', the eyes are closed, and the usual bathing and anointing, perhaps embalming, take place, performed by one of the household, or by the professional *libitinarius* or *pollinctor*. The body is composed, arrayed in the toga—the full dress of antiquity—ornamented with all the insignia won during the dead man's career, and placed in state on the *lectus funebris* in the *atrium*, or main chamber of the house, with the feet towards the street-door. There are also flowers, *corona* of honour, and burning censers supported on candelabra. Near by are attendants, among them being sometimes included paid mourners who chant the funeral wail. [These details may be seen in the Lateran Museum on the tomb relief of the Haterii, a family of considerable importance during the latter part of the 1st century.] Possibly a coin is placed in the mouth as passage-money across the Styx—a custom always in vogue to some extent. A wax impression of the face is then taken, afterwards to occupy its niche in the *ala*, a state room off the *atrium*, along with the masks (*imagines*) of the ancestral line, and to be supplied with the appropriate inscription, or *titulus*, recording the name, years, offices, and deeds of the dead. Outside, the fact of death is made known, and the proper safeguard taken against chance religious or social impropriety, by the hanging of a cypress or pine-branch at the entrance of the house.

In due time, which in ordinary cases is as soon as arrangements can be made, and in funerals of state from three to seven days, the last ceremonies take place. Criers go through the streets announcing its coming occurrence in the ancient formula: '*Ollus Quiris leto datus. Exsequias, quibus est commodum, ire iam tempus est. Ollus ex aedibus effertur*' ('This citizen has been given over to death. His obsequies those who find it convenient may now attend. He is being carried forth from his dwelling'). Under the supervision of the *designator* and his attendant lictors, the stately

funeral-train takes form and moves: musicians, and perhaps paid singers; dancers and pantomimists, who jest freely, sometimes impersonating in humorous wise even the deceased; a succession of cars, at times amounting to hundreds (six hundred at the funeral of Marcellus), on which sit actors dressed to impersonate the long line of the dead man's ancestors, wearing their death-masks, now taken from the niches in the *alæ*, and accompanied by lictors, as in life—symbolically conducting the most recent of the family line to take his place with his forefathers in the lower world; a display of the dead man's memorials—trophies, horses, dogs, insignia, painted representations of his exploits—after the manner of a triumph; more lictors, with down-pointed *fascæ*, reminiscent of olden-time burial by night; and then, high on a funeral car, the dead himself, with face exposed to the sky, or enclosed in a casket and represented by a realistic figure clad in his clothes and death-mask; the immediate mourners—sons with veiled heads, daughters bareheaded with flowing hair; and finally the general public, not without demonstration. On both sides, as the procession passes, is the Roman populace, pressing to the line, and climbing up

‘To towers and windows, yea, to chimney tops,’

to witness what must have been one of the greatest spectacles of all time.

Arrived at the Forum, the great centre of civic life, the dead is carried to the Rostra, on which, surrounded by his ghostly ancestry, he lies while his nearest relative delivers over him the *laudatio*, a formal and often extravagant glorification of the deceased and his forefathers which is preserved among the family archives, and whose uncritical use will do so much to falsify or distort Roman history. The procession then forms again, resumes its way, and passes through the city-gate to the destined place of cremation or inhumation at one of the great *mausolea*, such as that of Augustus, at the north end of the Campus Martius, or in one of the long lines of lots which border the high road. Here the dead, with ornaments, weapons, and other possessions dear in life, together with many memorials brought by friends and relatives, is placed upon an elaborate pyre, to which, with averted face, the nearest relative or friend, or some civic dignitary, applies the torch. As the flames rise to the summit of the pyre, perhaps they liberate from his lightly fastened cage an eagle, which soars aloft—the symbol of the spirit of the dead setting out for its home among the immortals. The embers are quenched with water or wine, the final farewell (another *conclamatio*) is uttered, and all return to the city except the immediate relatives, who collect the ashes of the departed in a napkin, bury the *os resectum* (see below) to preserve the form of earth-burial, perform a purification sacrifice, and partake of the funeral-meal in the family tomb-chapel.

There follow nine days of mourning, on one of which the now dry ashes are enclosed in an urn of marble or metal, and carried by a member of the family, barefooted and ungirdled, to their final resting-place in the tomb-chamber. At the end of this period, the *sacrum novendiale*, a feast to the dead, is celebrated at the tomb, and a funeral-banquet is held at the home. Mourning continues ten months for husbands, wives, parents, adult sons and daughters, eight months for other adult relatives, and in the case of children for as many months as they have years. Memorial festivals, which partake of the nature of a communion, are celebrated on Feb. 13-21, the *Parentalia*, or pagan All-Souls' Day; again on the birth or burial anniversary; and again at the end of March and May, the *Violaria* and *Rosaria*, when violets and roses are profusely distributed, lamps lighted in the tomb-

chambers, funeral-banquets held, and offerings made to the gods and to the *manes*, or spirits of the dead.

Such a funeral, though not unfamiliar to the Roman people, was the exception rather than the rule. The imposing nature of the whole—the splendour of its appointments, the dignity of the participants, the impressiveness of the stately train, with its hundreds of impersonated prætorians and consulars, traversing the principal thoroughfares between thronging spectators—may best be compared with the funerals of Italian royalty in modern times, though the latter probably fall far short of the magnificence of the ancient ceremony.

The funerals of middle and lower class people, and of most of the upper class, were less ostentatious, and unaccompanied by the *laudatio*, the display of death-masks, and the paraphernalia of wealth. Children, citizens of the lowest class, and slaves were carried to their last rest without public procession, and with few formalities.

Unlike modern burial-places, the Roman cemeteries were not public communal enclosures set apart by themselves, but were situated along the great highways that led from the city-gates, and took the form of a very long and narrow series of private holdings, whose front, occupied by imposing monuments, bordered immediately on the road. All streets leading from Rome had their tombs, and the location of sepulchres along them in the country also, on landed estates, was frequent. Most prominent among the highway cemeteries at Rome were the Via Flaminia and the Via Salaria on the north, the Tiburtina and the Prænestina on the east, the Latina and the Appia on the south, and the Aurelia on the west. Most magnificent of all was the Appian Way, *Regina Viarum*, which still displays almost unbroken lines of tomb-ruins from its issue at the old Servian Porta Capena to the Alban Mount, fourteen miles away. Among its two hundred or more larger monuments, displaying great variety of architecture and ornamentation, are to be seen most of the types of the Roman tomb: the *mausoleum*, round, and probably once with conical summit, copied and named after the tomb of Mausolus, the king of Icaria, who died about 351 B.C.; the *tumulus*, a conical mound heaped over the body or ashes of the dead, also reminiscent of Asia; the tomb above ground; the tomb excavated in the tufa bed of the Campagna; the combination of both, with tomb below and chamber above; the *columbarium*, for the reception of the cremated dead of burial-associations; the chambers in series called ‘catacombs’ (*q.v.*). Burial lots were marked by boundary stones, inscribed with measurements: e.g. ‘*in fronte p. xvi, in agro p. xxii.*’ (‘frontage, 16 ft., depth, 22 ft.’). Threats and curses were frequently added to safeguard the area and monuments against violation or profanation. The more pretentious areas were great family burial-places, where were laid to rest all the members of a gens, or branch of a gens, including its freedmen and slaves, and sometimes even clients and friends. Such a burial-place might include a generous plot of ground, with an area before the tomb, a garden behind, an *ustrina*, or crematory, *adicular*, or shrines with statues of the dead, banquet-room for anniversary use, pavilion, well, and custodian's quarters. The epitaphs, incised upon slabs let into the front of the monument, or on tombstones at the graves of individuals, or near the remains inside the vault, are characterized by great variety of content and expression. Name, parentage, public offices, and an accurate statement of the length of life are found in most of them, without dates of death and birth. A type may be seen in that of Minucia, the daughter of Fundanus, whose death is the subject of Pliny's *Ep.* v. 16:

'D. M. Minuciae Marcellae Fundani F. Vix. A. XII., M. XI., D. VII.' ('To the Departed Spirit [*Dis Manibus*] of Minucia Marcella, the Daughter of Fundanus, who lived 12 years, 11 months, and 7 days') (*CIL* vi. 16631).

A portrait-bust sometimes accompanied the epitaph, and it was not infrequent for the inscription to be in the form of an address to the passer-by from the mouth of the departed, as the quaint archaistic one of Marcus Cæcilius, which lies by the Appian Way (*CIL* i. 1006):

'Hoc est factum monumentum Maarco Caicillio.
Hospes, gratum est quom apud meas restitisti sedes.
Bene rem geras et valeas; dormias sine cura.'
(This monument is erected to Marcus Cæcilius. Stranger, it gives me pleasure that you have stopped at my resting-place. Good fortune attend you, and fare you well; may you sleep without care.)

Such appeals as this upon stones, the use of portrait-sculpture, and the custom of roadside burial illustrate the Roman yearning for continued participation in the affairs of the living, and an instinctive conviction as to future existence.

Among the lower classes, especially freedmen and the labouring part of the population, a most popular form of tomb was the *columbarium*, so named because of its resemblance to a dove-cot. Long narrow vaults were either built above ground or excavated in the tufa, and in their walls were formed numerous compact rows of niches, each of a size barely large enough to receive an urn containing the ashes of one person, whose identity was made known by a *titulus* upon a slab below the urn, or on the urn itself, sometimes accompanied by a small portrait-bust. One of these *columbaria* on the Via Appia, from which three hundred *tituli* have been preserved, was for the use of the freedmen of Augustus and Livia. Such tombs were sometimes given as benevolences, and sometimes erected by speculators, but it was more usual for them to be constructed, or at least managed, by *collegia funeraticia*, co-operative funeral associations, which sold stock, assessed regular dues, and paid benefits, thus ensuring their members proper disposition after death. They were administered by *curatores*, who divided and assigned the space by lot to the shareholders, who might in turn sell their holdings.

The lot of the ordinary slave and the very poorest class of citizens was less fortunate. Outside the line of the Servian Wall, where it crossed the plateau of the Esquiline, there existed, down to the time of Horace (when it was covered with earth and transformed into the Gardens of Mæcenæ), a great burial-ground which might be called 'the potter's field' of Rome. Here, as shown by excavations made from 1872 onwards, was an area of irregular dimensions extending a mile or more along the wall, from near the present railway-station on the north-east to the Lateran on the south-east, which had served as a necropolis from time immemorial, and was the burial-ground to which Horace made reference in *Sat.* i. viii. 8-16:

'Huc prius angustis eiecta cadavera cellis
Conservus villi portanda locabat in arca;
Hoc miserae plebi stabat commune sepulchrum,
Pantolabo scurrae Nomentanoque nepoti.
Mille pedes in fronte, trecentos cippus in agrum
Hic dabat, heredes monumentum ne sequeatur.
Nunc licet Esquilis habitare salubribus, atque
Aggerè in aprico spatiali, quo modo tristes
Albis informem spectabant ossibus agrum'
(Hither, of yore, their fellow-slave contracted to carry in their cheap coffins the dead sent forth from their narrow dwellings; here lay the common sepulchre of the wretched plebs, for Pantolabus the knave, and Nomentanus the ne'er-do-weel. A thousand feet front, three hundred feet deep were the limits; the monument not to follow the heirs. To-day you may dwell on a healthful Esquiline, and take walks on the sunny agger, where but now your sad gaze rested upon a field ugly with whitening bones.)

The reference in the above lines to the cheap coffins, the slave hireling, the contrast between the gloomy bone-strewn Esquiline of former days and

the healthful gardens of the present, and the sardonic allusion to the *cippus* as the one monument of a whole city of wretched poor constitute an eloquent comment on the mortuary destiny of the lowest class, though to interpret literally the poet's mention of whitening bones seems unnecessary. Excavation has revealed pit-graves 13 to 16 ft. square and of great depth, in which the bodies of the criminal and otherwise unfortunate were deposited one above the other, unburned, and with little ceremony.

Cremation and inhumation existed side by side throughout the pagan period. The earliest cemeteries—the lowest stratum of that on the Esquiline, and the necropolis recently (1902) excavated on the Sacred Way near the Forum—contain both cinerary urns and sarcophagi, the latter being sometimes made of hollowed tree-trunks. The later strata on the Esquiline also contain both. The Cornelian gens held to earth-burial until Sulla chose cremation as a measure of safety. The tomb-chambers of the Scipios, a branch of the Cornelian gens, on the Appian Way inside the Wall of Aurelian, were filled with sarcophagi containing unburned dead; and in many large tombs the heads of families were laid away in sarcophagi, while the cremated remains of their freedmen and the humbler members of the household were deposited about them in the same chamber. Inhumation, as the cheaper and more natural method, seems to have been the earlier, basic, and popular custom; even in Augustan times, when cremation was as nearly universal as it ever became, it was the custom to perform at least a symbolical burial of the body by the interment of a small part of it, the *os resectum*, usually a joint of the little finger.

The foregoing account of death and burial has to do principally with the 1st cent. A.D. and with the city of Rome. Naturally, there were variations in detail before and after this period: e.g. burial by night was the practice of earlier times, and was prescribed again by Julian, on the ground of inconvenience to urban business caused by diurnal rites; the cemeteries of the earliest times were less distant from the heart of the city, by reason of the lesser circumference of the primitive walls, each successive fortification carrying the line of tombs farther out because of the law forbidding burial within the city limit; there was less of both display and poverty before the rise of the Empire; sumptuary laws governing funerals were known from the first centuries of the city; the employment of chambers and galleries excavated in the bed of the Campagna, long known on a small scale, grew much more general and extensive after the rise of Christian Rome, developing into the great communal burying-places called 'catacombs'; cremation died out because of its expensiveness and the influence of belief in the resurrection. As to other cities, practice there was essentially the same as at Rome; and in small towns in the country a great deal of conservatism no doubt obtained, manifest in the retention of customs long after they had gone out in the capital.

All periods of the history of Roman burial, however, are unified by the belief in the continued existence of the dead, and in his ghostly participation in the life of the family and community, and by the consequent scrupulous care about proper burial, and the maintenance of right relations with the spirits of dead ancestors. The quick and the dead of ancient Rome were in a more than usually intimate communion.

DEATH AND DISPOSAL OF THE DEAD (Slavic).—The subject of death and the disposal of the dead, so far as the Slavic peoples are concerned, was discussed with considerable fullness in the art. **ARYAN RELIGION**, vol. ii. p. 11^b ff. It cannot be doubted that the primitive conditions in this particular phase of human life, though to some extent overlaid with a dressing of Christian thought and practice, have been maintained most faithfully among the peoples in question, and it was therefore quite natural that the writer of that article should begin with Slavic ideas and customs, so that, by comparing these with the corresponding phenomena among the linguistically allied races, viz. the Indian, Iranian, Greek, Roman, Celtic, Teutonic, and Lithuanian, he might carry his investigation back to the so-called Aryan period. There is consequently no need to cover the same ground again, but it may not be out of place to record here such facts as have emerged, or have come to the writer's knowledge, since the appearance of the article referred to. We shall arrange these fresh data under five heads.

1. Burial and burning of the corpse (cf. **ARYAN RELIGION**, vol. ii. p. 16 f.).—In the early historical period, as was shown in the passage cited, both of these methods were in operation—probably simultaneously—among the Slavs, and, as recent archaeological investigation shows, they prevailed also in the pre-historic age. With reference to *burial*, there has recently come to light a most remarkable correspondence between Middle Germany and Southern Russia in regard to the practice of constructing the tomb in the form of a hut.

At Leubingen, a station on the railway from Erfurt (Thuringia) to Sangerhausen, and not far from Sömmerda, there is a now celebrated sepulchral mound, which has been excavated by Prof. Klopsch, a long misunderstood pioneer in the study of primitive history. Near Helmsdorf, again, a village at no great distance from Leubingen, in the so-called Mannsfeld Seekreis, another mound, similar in many respects to that at Leubingen, was recently opened (cf. P. Höfer, in *Jahresschr. f. d. Vorgesch. d. sächs.-thüring. Länder*, v. [Halle, 1906]; and H. Grössler, *ib.* vi. [1907]). In each case the remains (which in the mound at Leubingen lay upon a flooring of wood, and in that near Helmsdorf in a bed-shaped chest of hewn timber) had been arched over by an actual wooden hut of excellent workmanship, with a steep roofing, the planks of which in the Leubingen example were thatched with reeds. The remains found at Leubingen were those of an elderly man, across whose breast had been laid the body of a girl some ten years old, while the Helmsdorf mound, to all appearance, contained but a single body, in a doubled-up position. The objects found beside the dead in both cases—bronze axes, dagger-rods and daggers, small chisels, a diorite hammer, and also numerous ornaments in gold, such as armlets, pins, spiral rings and bracelets—point to the Bronze Age (c. 1500 B.C.?). and also show that the dead had been persons of rank. In a dense layer of ashes under the chest in the Helmsdorf mound were found the skeletons of two men, who had doubtless been given to the dead as his servants. But the most interesting feature of either barrow is unquestionably the wooden hut, designed unmistakably to provide a house for the dead.

Now, although students of pre-historic times are as yet unaware of the fact, similar, and, indeed, almost identical erections are found in great profusion in the Russian *kurgans*, i.e. the sepulchral mounds which lend a picturesque variety to the monotony of the Steppes in the districts to the north of the Black Sea. These erections are met with, moreover, not only in the *kurgans* con-

structed by the Scythian tribes who once dominated that region, but also in those dating from the earlier epochs, which in so many respects still require investigation. It will be to the purpose, therefore, to give a relatively full description of a single specimen of the South-Russian burial-huts—that, namely, discovered in 1903 by V. A. Gorodkov in a *kurgan* situated in the Government of Ekaterinoslav, and dating, according to its discoverer, from the close of the second millennium B.C. (cf. *Results of the Archaeological Excavations in the District of Bachmut in the Government of Ekaterinoslav in 1903* [Russ.], Moscow, 1907, p. 152 ff.). In the heart of the *kurgan* was a spacious square cavity, on the floor of which rested a framework box of thick oak boards—some kind of coffin. Between the walls of the cavity and the box, on the east side, lay a red-coloured jar and a cow's head, while each of the four corners of the cavity contained a cow's foot. Inside the box was the doubled-up skeleton of a woman, lying on its left side, with the head turned towards the north-east, and the wrists under the face. At the neck of the skeleton were found small fragments of bronze beads or other ornaments of the kind. In front of the face stood an earthen vessel; and before the breast were a number of rattles, which had been cut from the backbone of an animal. The skeleton lay on chalky earth, but the skull had a pillow of rushes. The most striking feature of this burial vault, however, is the hut erected over the chest. This hut was supported by two posts fixed in roundish holes at the head and feet of the skeleton, but outside the box in which it lay. The post supported a beam, which had branches leaning against it on either side, so forming the sloping framework of the roof; the branches, again, were covered with reeds. Upon the roof-beam stood a number of pots upside down, and also a badly-weathered quern of sandstone. Above these was a layer of ashes, containing a cow's head, four cow's legs, a large pot with a dimpled ornamentation at its neck and a perforated bottom, incinerated bones, and a whetstone.

As bearing upon the primitive history of Russia, and even of Europe, however, these discoveries are surpassed in importance by the places for the cremation of corpses—perhaps the oldest in Europe—which have been discovered in the valleys of the Dniester and the Dnieper, to the east of the Carpathians, and at no remote distance from the localities above referred to. These places for cremation date, for the most part, from a late Neolithic civilization, which yields little of importance, but in their pottery they furnish a new factor in the cultural development of Europe, extending, as it does, towards the west, across Southern Russia and Bessarabia, and to the north of the Balkan Peninsula. Among its characteristic products are magnificently painted vessels, with plastic decorations of bulls' heads and the like, and numerous idols, mainly representing women and cattle.

The last-mentioned discoveries are due in the main to the researches of Chvojko, of Kiev (*Papers of the XIIth Archæol. Congress at Kiev* [Russ.], i.; also *Antiquités de la région du Dniepre* [Collection B. Khanenko, première livraison, Kiev, 1899], and [for Bessarabia] v. Stern ('The "pre-Mycenæan" Civilization in Southern Russia,' in *Papers of the XIIth Archæol. Congress in Ekaterinoslav* [Russ.], i.), and they have been critically examined by E. Meyer, *Gesch. d. Altertums*, i.² (Stuttgart, 1909) 741 ff. But we are not yet in a position to identify with certainty the peoples from whom emanated the civilizations thus traced at Tripolje, to the south of Kiev, and at Petreny, in Bessarabia.

2. The funeral procession (cf. art. **ARYAN**

RELIGION, vol. ii. p. 20).—In the passage cited we were able to indicate that the practice of bearing the dead to the grave on sledges, even in summer, once prevailed in certain parts of Russia. In an exhaustive work shortly referred to in that passage (viz. 'Sledge, Boat, and Horse as Accessories of Burial Ritual' [Russ.], vol. xvi. of the Moscow *Drevnosti*), Anučin has conclusively proved that in ancient Russia the dead were often, even in summer, conveyed to the grave on sledges, which, however, might be either *driven* or *carried*. The former method is illustrated by a picture in the Sylvester MS ('Conveyance of the Remains of St. Glebu by Sledge to the new Church'); the latter by a picture in the Sylvester MS of SS. Boris and Glebu ('Conveyance of the Corpse of Prince St. Boris by Sledge'). But, as the use of the sledge in funeral obsequies is also found, according to Anučin, among many Finnish tribes, and as to this day the funeral-sledge often supersedes the waggon—even in the finest season of the year—in the north-east of Europe, it is safe to conjecture that the Russians had adopted the practice from the East European peoples with whom they mingled as they spread towards the north-east. Traces of funeral-sledges are likewise found in Egypt, while Lycian grave-stones sometimes exhibit houses resting upon sledge-runners (cf. R. Meringer [*Indogerm. Forschungen*, xix. [1905] 409).

3. The gifts to the dead (cf. art. ARYAN RELIGION, vol. ii. p. 20 ff.).—Just as we read in the *Iliad* (xxiii. 171f.) that the four-horse team of Patroclus was burned upon his funeral-pyre, in Herodotus (iv. 71f.) that large numbers of horses were buried with the Scythian kings, and in Tacitus (*Germ.* 27) 'quorundam [the Germans] igni et equus adicitur'; so from the Russian *byliny*, or histories, we learn that men were interred with their horses, and sometimes even upon horseback. The burial of Bogatyri Potok Mikhail Ivanovič, for example, is thus described:

'Then they began to dig a grave there;
They hollowed out a grave deep and large:
A deep one, some twenty fathoms wide.
And then was Potok Mikhail Ivanovič,
With his steed and harness of war,
Lowered into the deep grave.
And they covered it with a roofing of oak,
And strewed it with yellow sand.

(Anučin, *loc. cit.*)

4. The funeral feast (cf. art. ARYAN RELIGION, vol. ii. p. 20^b): attentions paid to the dead after the funeral rites (Ancestor-worship) (*ib.* 23 ff.).—The various facts—and especially those referring to the White Russians—set forth in the paragraphs cited have meanwhile been largely supplemented from various quarters of the Slavic world. This fresh information is supplied by Matthias Murko in an art. entitled 'Das Grab als Tisch,' in *Wörter und Sachen: Kulturhist. Ztschr. f. Sprach- u. Sachforschung*, ed. R. Meringer, etc., ii. 1, Heidelberg, 1910, p. 79 ff. The first three chapters of this most instructive essay deal respectively with the following subjects: (1) funeral repasts of the Slavs at the burial-place after the interment; (2) sepulchral meals of the Slavs at the graves of individuals; and (3) sepulchral meals on the all-souls'-days and at the ancestral feasts of the Slavs, and meals for the dead among aliens in Russia. That Murko is in this field of inquiry essentially at one with the present writer appears, e.g., from his remarks on p. 110:

'For experts in this study, it will not be necessary that I should emphasize the fact that so many customs and festivals still in vogue recall those of the Greeks and the Romans, and even surpass the latter in remoteness of origin, so that we must look for their parallels among primitive peoples. I shall merely state that the original purport of the practice of eating and drinking at the grave can still be clearly recognized: the deceased still takes part in the meal; the mourners leave a place vacant for him at the grave-table; they expressly invite

him; they eat with delight of his favourite dishes; they give him wine and honey to drink; they pour wine and water upon the head of his grave; and beside or upon the grave they set food for the dead,' etc.

5. In the article referred to, however, Murko carries his investigation considerably further, as in subsequent chapters he sketches the process by which the relics of ancient ancestor-worship have in the Eastern Church become intermingled with the primitive worship of the dead among the Slavs ('worship of heroes and its transference to the Christian martyrs'). The details of the process are given in the following chapters: (4) the early Christian Agapæ and the meals connected therewith; (5) the survival in the Slav languages of Gr. *ῥάμματα* and other foreign words connected with the cult of the dead (cf. art. ARYAN RELIGION, vol. ii. p. 27^a, regarding Russ. *kanunū* = Gr. *κανών*); (6) Romano-Greek influence upon the spring festivals for the dead among the Slavs (O. Slav. *rusalija*, Serv. (*družičalo*, Russ. *radunica*; cf. vol. ii. p. 25^b and 25^a); Murko's derivation of Russ. *radunica*, from Gr. *ῥόδωνια* = *ὁ τῶν ῥόδων λειμὼν* of Suidas, is original and convincing, so that its meaning is the same as that of *Rosalia*, the spring festival for the dead); (7) Lat. *silicernium*, *silicern(i)us* (cf. vol. ii. p. 28^a; Murko thinks that this word denotes the feast held upon the *silices*, i.e. the rubble of the grave).

LITERATURE.—This is sufficiently indicated in the art. and in ARYAN RELIGION. O. SCHRADER.

DEATH AND DISPOSAL OF THE DEAD

(Tibetan).—In Tibet, death is regarded as the work of the death-demon, who has accordingly to be exorcized from the house and locality. The ceremonies at death and the methods of disposal of the body are almost entirely of a pre-Buddhistic or Bon character, although now conducted for the most part by orthodox Buddhist priests.

The Tibetans believe that the soul lives after the death of the body, but the future life desired by the people is not the Buddhistic one of a higher earthly re-birth or the arhat-ship of *Nirvāṇa* or Buddhahood. They desire the new life to be in an everlasting paradise, which is now identified with the Western Paradise of Buddha Amitābha of the later Indian Buddhists. The object of the death-ritual, therefore, is, firstly, to secure the due passage of the soul of the deceased to this paradise, and, secondly, to safeguard the earthly survivors against harm from the death-demon, as well as from the spirit of the deceased in the event of its failing to reach paradise and so becoming a malignant ghost.

Formerly, so late as the 8th cent. A.D., human sacrifices were made on the death of kings and nobles. Five or six chosen friends from amongst their officers were styled 'comrades,' and killed themselves on the death of their master, so as to accompany him to paradise, and their bodies were buried alongside of his. The crests of the hills were crowned by such sepulchral mounds, as in China and amongst the Turkic tribes. Beside the body were buried the clothes and valuables of the deceased, his bow, sword, and other weapons, and his favourite horse; and a tumulus of earth was thrown up over all. Animal-sacrifice seems also to have been practised, as is evidenced by the dough effigies of animals which are offered as part of the sacrificial rite by the hands of Buddhist monks, who now perform the popular death-rites, and by their religion are prohibited from taking life (L. A. Waddell, *Buddhism of Tibet*, p. 518 f.).

i. Extraction of the soul.—On the physical death of a person, Tibetans believe that the spirit does not depart forthwith, but continues to linger within the corpse for a varying period, which may extend to four days, after the cessation of the heart and

breath. In order to secure the release of the spirit in that direction in which it has the greatest chance of reaching paradise, the services of an expert priest are necessary.

After a death occurs, no layman is allowed to touch the body. A white cloth is thrown over the face of the corpse, and a priest is sent for to extract the soul in the orthodox manner. This priest is one of the higher monks, and bears the title of 'The Mover or Shifter' (*p'o-bo*). On his arrival in the death-chamber, all relatives and others are excluded, and the priest, closing the doors and windows, sits near the head of the corpse and chants the directions for the soul to find its way to the Western Paradise. After exhorting the soul to quit the body and give up its attachment to earthly property, the priest seizes with his forefinger and thumb a few hairs on the crown of the corpse, and, jerking these forcibly, is supposed thereby to make way for the soul of the deceased through the pores of the roots of these hairs, as though actual perforation of the skull had been effected. If, in the process, blood oozes from the nostrils, it is an auspicious sign. The soul is then directed to avoid the dangers which beset the road to paradise, and is bidden God-speed. This ceremony lasts about an hour. When, through accident or otherwise, the body is not forthcoming and the fourth day is expiring, this rite is performed *in absentia* by the priest conjuring it up in spirit whilst seated in deep meditation.

2. Handling the corpse.—All persons are tabued from touching a corpse (*ro*) except those who belong to the father's family or those indicated by the astrologer-priest, who casts a horoscope for the purpose. This document also prescribes the most auspicious date for the funeral and the mode and place of disposal of the body, as well as the worship to be performed for the soul of the deceased and for the welfare of the surviving relatives.

The persons who may ordinarily handle a corpse must be children by the same father as deceased (*p'as-spun*), though in Lhasa and large towns with many strangers the professional scavengers may do this work. In rural communities, when a man has no paternal relatives of his own, he procures admission into the family of a friend for such funeral purposes as official mourner by giving a dinner to announce the fact. The persons so authorized then approach the body with ropes, and, doubling it up into a crouching attitude, tie it in this posture, with the face between the knees and the hands under the legs. If *rigor mortis* be present, bones may be broken during the process. The attitude of the body resembles that found in some of the early sepultures, and is probably a survival of the pre-historic period. It ensures portability of the corpse.

When tied up in the proper attitude, the body is covered with some of the clothes of the deceased, put inside a sack made of hide, tent-cloth, or blanket, and removed from the room to the chapel of the house (where there is one) as a mortuary, and placed in a corner there. A sheet or curtain is stretched in front of the sack as a screen, and all laymen retire. Where the body has to be kept a long time for climatic or other reasons, it may be slung up to the rafters.

3. Pre-funeral rites.—Priests remain in relays day and night chanting services near the corpse until it is removed. The head priest sits near the screen, with his back to the corpse; the other priests face him, and all read extracts from the Buddhist scriptures, often from different books at the same time; and they keep alight lamps (from 5 to 108, according to the means of the deceased). The relatives sit in another room, and offer food and drink to the deceased. His bowl is kept filled

with tea or beer, and he is offered a share of whatever food is going; and such drink and food as are offered are afterwards thrown away, as it is believed that their essence has been abstracted by the soul of the departed. Feeding the *manes* is also found in the Indian Buddhist practice of *avalambana*, based upon the Brāhmanical rite of *śrāddha*.

Before the funeral the guests, after libations, partake in solemn silence of cake and wine within the house in which the corpse is lying; but, after the latter is removed, no one will eat or drink in that house for a month.

4. Funeral procession.—This occurs on the auspicious day and hour fixed for it by the astrologer. The relatives and guests bow to the corpse, which is then lifted by the official mourners, put on the chief mourner's back, and carried to the door, where it is placed in a square box or coffin (*ro-rg'am*) provided by the monastery which is conducting the funeral, and the box is carried thence by the official mourners to the cemetery or cremation ground. If the chief mourner is a woman, she does not accompany the funeral, but, after walking thrice round the coffin and prostrating herself thrice, is conducted back to the house.

In front of the procession go the priests, chanting Sanskrit spells or *mantras* extracted from the later Indian Buddhist scriptures, and blowing horns, or beating drums, or ringing handbells; then follow the relatives and friends, and last of all comes the coffin. This is led by the chief priest by means of a long scarf, one end of which is attached to the coffin; the other end he holds in his left hand, whilst with his right he beats a skull drum as he walks. This scarf probably represents the 'soul's banner' (*hurin-fan*), which is carried before the coffin by the Chinese.

The spot or cemetery to which the body is carried is usually a solitary rock on a wild hilltop, and is believed to be haunted by evil spirits. In Lhasa the ordinary cemetery (*dur-k'rod*) is within the city. The corpse must not be set down anywhere *en route*, otherwise the final ceremony would have to be performed at that place.

5. Disposal of the body.—The particular mode in which the body is to be disposed of is prescribed by the astrologer-lama. Of the various modes, one only, namely cremation, presents Buddhist features. The methods may be said to be five in number:

1. *Consumption of flesh by animals and burial of bones*.—This, the so-called 'terrestrial method,' is the commonest and obviously the most ancient. It was a custom of the ancient Scythians known to Herodotus; and its practice by the Persians at the present day may also be derived from such a source or from the Turkic tribes. There seems no reason to ascribe it, as has been conjectured, to the influence of those *Jātaka* tales which relate that Śākyamuni in former births offered his body to feed famished tigers and other animals. Such a practice of disposal of the dead is not recorded in Indian Buddhism, and its present-day practice in Siam and Korea, as well as in Tibet, is obviously a survival of the ancient Scythic and Mongolian custom.

At the cemetery the body is placed face downwards on the rock or slab of stone, divested of its clothes, and tied to a stake. The priest, chanting *mantras*, scores it with a large knife, and the corpse-cutters slice off the flesh and throw it to the vultures and other animals of prey which frequent these cemeteries. In Lhasa dogs and even pigs assist in devouring the corpses. As, however, vultures are esteemed more auspicious, the attendants for a small sum engage to keep off the other less desirable beasts of prey. The rapidity with which the body is devoured is considered of good

omen, and the skull of such a corpse is prized as an auspicious libation-bowl.

The bones of the stripped and dismembered body are then buried, and, if the person be wealthy, a mound or tower is erected over them.

2. *Total consumption of flesh and bones by animals.*—This, the so-called 'celestial method,' is much less common, though not infrequent with the richer classes. The bones, stripped of their flesh as above, are not buried, but pounded and mixed with meal, and given to dogs and vultures to consume.

3. *Throwing into rivers or at waste places.*—This, the most ignoble method, is the fate of the poorest, as burying entails considerable expense. The body is dragged by a rope like a dead beast. In this way are also disposed the bodies of criminals, those killed by accident, lepers, and sometimes barren women. The skulls of enemies slain in battle are deemed auspicious for drinking-goblets.

4. *Cremation.*—This mode of disposal of a quasi-Buddhistic kind is reserved in Tibet for the bodies of the higher lamas, though, in those districts where wood fuel is more available, it is also used for the laity.

The body is placed on the pyre, seated erect in a devotional attitude, cross-legged like Buddha's image. The soles of the feet are turned upwards, the right hand with palm upwards resting on the flexed thigh, and the left hand is raised in front of the shoulder in the 'blessing' attitude. In the case of the laity, the face seems usually to be placed downwards. When the wood is lighted, melted butter is poured over the body, and, when the first limb or bone drops from the body after a few hours, the funeral ends, though some of the relatives remain till the cremation is over. The body is seldom completely reduced to ashes. The ashes and unconsumed relics are removed by the priests to the house of the deceased, and there pounded and mixed with clay to form in a mould miniature votive *chaitya* medallions called *ts'a-t's'a*, the *dharma sarira* relics of Indian Buddhists. These are placed in the niches of the funereal towers known as *chortens*, or, if the deceased be rich, a special tower may be erected over them (see art. CHÖRTEN).

5. *Preserving the entire body by embalming.*—This mode seems to be restricted to the sovereign Grand Lamas of Lhāsa and Tāshilhūnpō. The body is embalmed by salting, and, clad in the robes of the deceased and surrounded by his personal implements of worship, is placed, in the attitude of a seated Buddha, within a gilded copper sarcophagus in one of the rooms of the palace; it is then worshipped as a divinity. Before it, on an altar, food and water are offered, and lights are kept burning. Eventually it is enclosed in a great gilded *chorten*, surmounted by a gilt dome, and becomes one of the recognized objects of worship to pilgrims.

With the disposal of the body, the relatives and guests disperse, after a feast given in the open air.

6. *Post-funeral obsequies.*—The funeral does not end the ceremonies. The soul of the deceased is not effectively disposed of until forty-nine days after the death, and the death-demon is also to be expelled from the locality. This latter exorcism is an indigenous Bon rite, and must be performed within two days after the funeral. It is termed the 'Turning away of the face of the Devouring Devil (*Za-dre*).' The demon is represented as of human form, riding upon a tiger; and, in laying the evil spirits, figures of animals moulded in dough are used in the sacrifice. For the final disposal of the soul of the deceased, further priestly services are required weekly until forty-nine days after death. During this period (*i.e.* 7×7 days)

the soul is believed to remain in a purgatory or intermediate stage (*bar-do*) between death and regeneration, and is assisted onwards by the prayers of the priests. For this a lay effigy of the deceased is made in the house, on the day on which the corpse was removed, by dressing up a bench or box with the clothes of the deceased, and for a face a paper mask is inserted bearing a print of a dead Tibetan. On the forty-ninth day this service is completed, the paper mask burned, and the clothes given away. The priests receive as presents some valuable articles from the property of the deceased, and a feast concludes the ceremony.

Mourning is practised chiefly for young people; the old are less lamented. The full term of mourning is about a year, but three or four months is more usual. During this time no coloured clothes are worn, nor is the face washed or the hair combed; men may shave their heads, and women leave off their jewellery and rosaries. For Grand Lamas the general mourning of the people lasts from a week to a month.

All the places where bodies are buried or otherwise disposed of are esteemed sacred.

DEATH OF THE GODS.—See DEICIDE.

DEBAUCHERY (French *debaucher* [*de*, 'from,' and old Fr. *bauche*, 'a course,' 'a row'], 'to lead from the straight course'; hence 'seduction from duty,' 'excessive intemperance,' 'habitual lewdness').—Although individuals who habitually indulge in reckless dissipation are justly regarded as defective in ordinary self-control, and although it might be shown on incontestable evidence that no inconsiderable proportion of such persons are insane or mentally defective, it would still be preferable to approach this subject from the standpoint of normal psychology in order to trace the nature of the impulse which impels men in the direction of excessive intemperance and lewdness. To do this successfully we must take into consideration the habits and proclivities of primitive men. Uncivilized peoples manifest an intense love of excitement, particularly in connexion with their social and religious gatherings. All the writings of travellers referring to the domestic and social life of savages are unanimous as to the fact that every event out of the daily routine which causes people to assemble together is likely to become an occasion for intoxication. Birth alone is perhaps less associated with this form of enjoyment; marriages and deaths are certainly a very common excuse for it, and it is remarkable that we still retain survivals of these customs even in Western Europe. A culmination in intense excitement without the aid of intoxicants is frequent in their social gatherings. Featherman (*Social Hist. of Races of Mankind*, 1881-91, iii. 341) gives many examples, from which the following may be selected:

'They arranged themselves in groups, and at a given signal each group began to sing at first in a low tone of voice, which became louder and terminated in dreadful yells and hideous howls. The jumping was so violent and their efforts were so furious that some of them fell senseless to the ground. Three or four players or sorcerers stood in the centre, shook their tamarak, and blew tobacco smoke from a cane pipe upon the dancers.'

Mrs. French-Sheldon (*JAI* xxi. [1891] 367), speaking of the natives of East Africa, says:

'At some of their festivals this dancing is carried to such an extent that I have seen a young fellow's muscles quiver from head to foot, and his jaws tremble without any apparent ability on his part to control them, until, foaming at the mouth and with his eyes rolling, he falls in a paroxysm upon the ground,

to be carried off by his companions. This method of seeking artificial physical excitement bears a singular resemblance to the dances of other nations outside of Africa.'

Not only are the reunions of savage peoples characterized by intoxication and induced physical and mental excitement, but their religious ceremonies owe attraction largely to the induced mental fervour of the ministrants and audience. Partridge (*AJPs*, Apr. 1900, p. 363) goes so far as to hold that intoxication is one of the most important parts of the religious and social life of primitive man. He says:

'The use of alcoholic beverages arose in connexion with the religious social life in the effort to heighten the religious self-consciousness. Its use for these purposes among primitive people is widespread and almost universal.'

Among some tribes in the Philippine Islands the shaman (usually a woman) works herself up into frenzies of nervous excitement by means of contortions and copious draughts of fermented liquor. Feasting and revelling follow, until oftentimes at her ceremonies all present become intoxicated, and fall into an unconscious state (cf. Tylor, *Prim. Cult.*³ ii. 134 ff.). Similar practices are universally prevalent at the present day among the Persian dervishes, who produce in themselves states of exaltation and hallucination by means of opium and hashish. A similar condition is induced by the Peruvian priests by means of a drug known as 'tonca' (*ib.* 416 ff.). The reunions of savage and barbarous peoples are characterized not only by intoxication, but also, frequently, by sexual orgies of a revolting character. Bancroft (*Native Races*, i. 551) says (quoting Kendall):

'Once a year the Keres have a great feast, prepared for three successive days, which time is spent in eating, drinking, and dancing. . . . To this cave, after dark, repair grown persons of every age and sex, who pass the night in indulgences of the most gross and sensual description.'

Writing of the Mosquitos, the same author (p. 735) states:

'Occasionally surrounding villagers are invited, and a drinking-bout is held, first in one house and then in another, until the climax is reached in a debauch by both sexes of the most revolting character.'

The ravenous appetite of certain savages justifies the accusation of gluttony which has been ascribed to them by various authors. The enormous development of the jaw muscles, as well as the protuberance of the alimentary system, is a sufficient indication of their propensity for swallowing enormous quantities of food when opportunity offers. A Yakut child, according to Cochrane, devoured at a sitting three candles, several pounds of sour frozen butter, and a large piece of yellow soap, while an adult of the same tribe devoured forty pounds of meat in a day. Wrangle says each of the Yakuts ate in a day six times as many fish as he could. The Comanches, according to Schoolcraft, eat voraciously after long abstinence, and without any apparent inconvenience (quoted from Spencer's *Sociology*, i. 45). That debauches are restricted solely through the want of opportunities for prolonging and repeating them is only too apparent from the histories of those savage or barbarous tribes which have been brought into close and constant contact with the more unscrupulous representatives of civilization. So long as alcohol and pleasurable excitement were obtainable, no price was grudged for them until, as a consequence of reckless self-abandonment, the wretched hedonists stood stripped of their possessions, and incapable of resuming their previous methods of life. The unfitness of savages, in the majority of instances, for regular or sustained employment of any kind is one of their most marked characteristics. It might be objected that such a generalization is too sweeping, and, moreover, that war and the chase are the only careers open to primitive man. It may be admitted that many members of the so-called inferior races have shown exceptional

aptitude for commerce, agriculture, and industry of various kinds; but the history of the emancipated Negroes and of the native Indians in the Reserve Territories of the United States is conclusive proof of the inadaptability of these races, as a whole, for the rôle of civilization in which sustained and regular labour is the active and most important element. In these races labour is fitful and distasteful, and alternates with long spells of inactivity and unproductiveness.

From the foregoing statements it is evident that among the members of uncivilized communities certain anti-social defects which are hostile to the progress of civilization are extremely prevalent. These defects may be summed up as: (1) a craving for intense mental states, which is most easily gratified by induced excitement, by alcohol or other drugs, by sexual excitement, or by the appetite for food; (2) an inability or, at any rate, a strong disinclination for sustained mental or physical exertion. The representative anti-social elements in a modern civilized community may be regarded as the legitimate survivals of uncivilized ancestors. They all manifest the same strong craving for intenser mental states, which can be fully gratified only by the grosser forms of dissipation, while they also exhibit the natural disinclination for sustained and productive labour. The prostitute, the gambler, the drunkard, the criminal, and the loafer have this in common, that they desire the grosser forms of excitement, that they are prodigal of their means, and unproductive in their methods of supplying their wants.

The view which regards the pronounced anti-social members of a community as the survivals of a period when the race as a whole was comparatively primitive in its social development is the only scientific one, and displaces to a large extent the older views of deliberate sinning and moral responsibility; for a little consideration will enable us to see that a person who is constitutionally *a-moral* cannot be also at the same time *im-moral*. Such a statement must not be taken to imply a disbelief in individual moral responsibility, for it must be recognized that persistent immoral conduct may depend upon opportunity and the absence, for any reason, of public opinion. It follows that a person who is able to control his conduct under the influence of any ordinary deterrent must be, more or less, responsible for his conduct in the absence of these deterrents. In the development of society, as of the individual, there are two factors—environment and evolution. The environment is never constant but is always changing, while the development of a society depends upon the development of its units, subject to the influence of the environment. Physically as well as mentally, the individual must be in harmony with his surroundings or he cannot exist. In every established race of living beings the majority of the individuals present an average mean of certain qualities the possession of which entitles them to be regarded as normal representatives of their race; but there is in every such race a large minority of individuals who vary to a greater or less extent from this mean of any given quality. Some of them possess the quality in excess of the mean, others in defect. The majority of the members of a civilized community subordinate their desires for the grosser pleasures to the duty of sustained effort and the dictates of morality. Through a long process of natural selection this standard has been attained; but, just as a race of men present marked divergencies in stature or mental ability, so do they manifest throughout their composing units the greatest differences in respect to social qualities, varying from the highest manifestations of altruism to an absence of the

sense of responsibility and a reckless craving for gross self-indulgence. 'A community,' says Giddings (*Princ. of Sociol.*, 1898, p. 414), 'that delights in many harmonious pleasures has, on the whole, more chances in life than one which is satisfied with a few intense pleasures.' It is scarcely necessary to insist upon the instability of a community the majority of whose members are constitutionally indolent or immoral. We see, therefore, that the debauchee and the loafer are variations from the mean type of their society; we also see the sense in which they may be described as representatives or survivals of more primitive social states. In relation to their social environment they are anti-social and irretrievably doomed to elimination. The rapidity of this process of elimination is apt to be obscured by the fact that each new generation produces its fresh quota of individuals who are socially abnormal; but it must be borne in mind that the rapidly changing environment advances the moral standard of each generation, and that therefore a relatively higher and more stringent natural selection is gradually being brought to act upon those unfortunate units whose mental or physical organization is out of harmony with its requirements. With the advance in the standard of morals of a community there emerges gradually an expression of the ethical attitude of the public towards disease and infirmity, of which sufficient proof is to be seen in the improved condition of the insane, in the founding of 'homes' for epileptics and inebriates, and in the increased interest in the study of criminology. All these movements exhibit the tendency of modern societies to regard the actions of its anti-social members as irresponsible. It therefore seems highly probable that at no distant date civilization will enable us to dispense with retaliative punishment as a deterrent in certain moral delinquencies, and that the State will take upon itself the regulation of the lives of those who are incapable of living up to the standard of decency and order required by the existing social environment.

DECALOGUE.—*Introductory.*—There is probably no human document which has exercised a greater influence upon religious and moral life than the Decalogue. On account of its brevity, its comprehensiveness, its forcefulness, and its limitations, it has stood out from other teaching, and has been embedded in Christian liturgies and catechisms, so that it is difficult for any one brought up with any degree of Christian culture to escape knowledge of its contents. The exalted idea of its superior value goes back certainly to the Book of Deuteronomy; for we are told repeatedly there that the Ten Words were written upon two tables of stone by God Himself, and even with His finger¹. (4¹³ 5²² 9¹⁰ 10¹⁻⁴; cf. Ex 31¹⁸ 32¹⁶ 34¹⁻²⁸). However freely the statements may be interpreted, however figuratively the author may have written, it was certainly his intention to show that he placed this code above all other legal codes, these words above all other revealed words. In other cases it sufficed to say that Jahweh spoke to Moses, and Moses' memory was depended upon to convey accurately to the people all the vast amount of revelations given in the course of many days. But the Ten Words were so precious that no risk of forgetfulness could be run, and they were at once engraven on the solid stone. And

¹ Compare our Lord's casting out devils by the 'finger [i.e. the power] of God' (Lk 11²⁰).

there is more to show their high station. When Moses brought the stones down from the mountain, and saw Israel's apostasy, he dashed the stones to the ground and broke them. The precious record could not be lost, however; nor could Moses, who may be presumed to have known them by heart, be trusted to reproduce them. He was directed to prepare two new tablets of stone, and take them up to the mountain again, that the original text might be restored by the same finger which engraved the first copy. Finally, that there might be no further chance of breakage, Moses by command made an ark of acacia wood for their safe keeping (Dt 9. 10). It is now advisable to see what this document is, and to test the statements accounting for its origin.

1. The two forms of the Decalogue.—The Decalogue has come down to us in two versions which differ to a considerable extent, one (in common use) being in Ex 20²⁻¹⁷, the other (unfortunately almost ignored) in Dt 5⁶⁻²¹.¹ Some of the variations in the Decalogue may be due to accidents in the transmission of the text, but the most of them are certainly deliberate. Moreover, the process of development did not stop with our present Heb. text, as the LXX shows still further modifications, few if any of which can be fairly attributed to the translators.

In the case of the *Fourth Commandment*, the important differences are indicated in the following parallel renderings, italics showing variations:

| Ex 20 ⁹⁻¹¹ . | Dt 5 ¹²⁻¹⁵ . |
|---|---|
| Remember the sabbath day to sanctify it. Six days shalt thou labour, and do all thy work; but ² the seventh day is a sabbath to Jahweh thy God. Thou shalt not do ³ any work: thou and thy son and thy daughter, thy man-servant and thy maid-servant, and thy cattle, ⁴ and thy guest who is within thy gates. ⁵ For in six days Jahweh made the heavens and the earth, the sea ⁶ and all that is in them, and he rested on the seventh day. Therefore Jahweh blessed the sabbath ⁸ day and sanctified it. | Guard the sabbath day to sanctify it, as Jahweh thy God commanded thee. Six days shalt thou labour and do all thy work; but the seventh day is a sabbath to Jahweh thy God. Thou shalt not do any work: thou and thy son and thy daughter, and thy man-servant and thy maid-servant, and thy ox and thy ass and all thy cattle, and thy guest who is within thy gates; ⁷ in order that thy man-servant and thy maid-servant may rest as well as thou. And thou shalt remember that thou wast a servant in the land of Egypt and that Jahweh thy God brought thee out from there by a strong hand and by an outstretched arm. Therefore Jahweh thy God commanded thee ⁹ to make the sabbath day. |

¹ There are many other instances of duplicates in Holy Scripture: Ps 18 has been incorporated in the history of David (2S 22), on the supposition that it is an account of an episode in his life; but a more striking parallel for our purpose, because of the importance of the material, is the Lord's Prayer (Mt 6⁹⁻¹³, Lk 11²⁻⁴).

² LXX has *τῇ ἡμέρᾳ*; so in Dt 5¹⁴=*יום*, 'but on the seventh day there is a sabbath (or rest)'.
³ LXX adds *ἐν αὐτῇ*; so in Dt 5¹⁴=*בו*, a necessary correction, followed by Lat. and Eng. versions. This reading is found in the Papyrus Nash (see Peters, *op. cit. in/sra*).

⁴ LXX reads: 'thy ox and thy ass and all thy cattle,' in agreement with Dt 5¹⁴. The translator would scarcely have inserted this phrase for the sake of harmony when he leaves so much else divergent; therefore the early Heb. texts must have differed from each other in the same code.
⁵ LXX reads: 'the guest who dwells with thee'; so in Dt 5¹⁴. In spite of its more primitive appearance (cf. below), this reading can hardly be original, for the Heb. phrase would not have been changed after the Greek version was made. The LXX expression is more comprehensive, and may be a free rendering, though all else is intensely literal.

⁶ LXX B lacks 'the sea'; perhaps it is a later addition.
⁷ LXX B adds here: 'for in six days the Lord made the heaven and the earth and the sea and all that is in them.' The words are a manifest harmonizing gloss, as is shown by the impossible connexion with the following clause, 'in order that thy man-servant and thy maid-servant may rest as well as thou.' The gloss may have been found in a Heb. text.

⁸ LXX has *εὐλόγησεν*, 'seventh'—a better reading, for it was Jahweh's blessing of the seventh day which made it the sabbath.
⁹ LXX reads: 'that thou shouldst guard the sabbath day and

The peculiar phrases in the Deuteronomic edition are characteristic of the author; they are unmistakable, for there is no other OT writer whose style is so readily detected (see *Driver's Deut.*, in *loc.*). It will be noted that we have here a commandment, and the reasons for its observance. The two versions have no important divergence in the commandment, but separate absolutely on the reasons. Beyond question Deut. is the older. The sanction on humane grounds is original with him, for it accords with his spirit through and through. There came a time when grounds of humanity were not strong enough. Another editor, perhaps the one who constructed the Creation story in Gn 1-2⁴ for this purpose, put it on a basis which is to him distinctly higher—that man should follow the example of God. That story of the Creation is much later than Deut., and this addition to Ex. is perhaps the latest touch to the Decalogue. It is unfortunate that this version, with its sanction on a ground which nobody believes now, is the one in general Christian use.

In the *Fifth Commandment*, Dt 5¹⁶ has two clauses which do not appear in Ex 20¹². The former version runs: 'Honour thy father and thy mother, as Jahweh thy God commanded thee, that thy days may be long, and that it may be well with thee, upon the land which Jahweh thy God is giving thee.' These are common Deuteronomic phrases, and are plainly editorial additions. The first obviously overlooks the fact that Jahweh Himself is supposed to give the words from His own mouth. The second is found in the best Greek texts of Exodus, but preceding the clause about long days. The words may have got into some of the Heb. editions, but not into those which have come down to us. In earlier times, length of days would be a sufficient reward, but later the craving for good days would naturally find expression.

In the *Ninth Commandment*, Dt 5²⁰ differs from Ex 20¹⁶ by a single word: instead of נָפַח, 'false,' we find נָא, the word used in the Third Commandment for 'vain' (cf. below). The Greek text renders freely: 'Thou shalt not falsely testify against thy neighbour false testimony,' and the renderings of Deut. and Ex. agree *verbatim et literatim*, showing a careful comparison, which ignores the difference in our present Heb. text. The proper rendering of the Hebrew is: 'Thou shalt not answer against thy neighbour a false witness.' By a slight change of the text (נָא for נָפַח) we get 'testimony,' as LXX. But the Heb. seems to mean that a man shall not bring a false witness to testify against his neighbour, as Jezebel did against Naboth. This view makes the mandate more ethically refined, laying the stress of the wrong on the procurer of false testimony rather than on the witness.

In the *Tenth Commandment* we have a considerable variation:

| | |
|---|---|
| <p>Ex 20¹⁷. Thou shalt not covet the house¹ of thy neighbour; thou shalt not covet the wife of thy neighbour;² nor his manservant nor his maid-servant, nor his ox nor his ass,³ nor anything which is thy neighbour's.</p> | <p>Dt 5²¹. Thou shalt not covet the wife of thy neighbour. Thou shalt not desire⁴ the house of thy neighbour, nor his field, nor his man-servant nor his maid-servant, his ox nor his ass, nor anything which is thy neighbour's.</p> |
|---|---|

The use of 'desire' instead of repeating 'covet' sanctify it.' This could scarcely be a rendering of the present text. In the text above, instead of 'make' we might render 'institute.'

¹ The LXX order is 'wife,' 'house,' as in Deuteronomy.

² LXX uses the same verb in both clauses, as in Exodus.

³ LXX adds: 'nor his field,' as in Deuteronomy.

⁴ LXX adds in both versions: 'nor any cattle of his,' to agree with v. 10. Codex L has 'nor any vessel of his,' reading נָא as נָפַח.

⁵ The two texts of LXX in that verse, as in the preceding, agree *verbatim et literatim*.

is presumably for rhetorical elegance. The transposition of 'wife' and 'house' is not so easily explained. It may be due to the greater importance of the wife in the time of Deut., taking the wife out of the property class (so *EBi* i. 1049, s.v. 'Decalogue'); it may be a copyist's error; it may be an effort to secure a more logical sequence, the wife not belonging so strictly to the category of property as the other objects enumerated; or it may be due to the influence of such facts as David's marriage with Bathsheba. The interpolation of 'field' seems surely to reflect the impression made upon the people by the story of Naboth's vineyard, and of other instances which gave occasion to Is 5⁴ 'Woe unto them that join house to house, that lay field to field, till there be no room, and ye be made to dwell alone in the midst of the land.' Cf. Mic 2². There are a few other variations, but they practically consist of the addition of conjunctions in Deut. to connect the clauses for greater rhetorical effect.

A few of the more important readings of the Greek text may be noted beyond those already cited. In Ex 20¹ A reads: 'And the Lord spake to Moses all these words, saying.' Here we have an explanation of the singular which is used throughout the Decalogue. The words are in the first instance commands to Moses. This introduction is scarcely consistent with the statement of Deut., that they were first inscribed upon stone tablets by the finger of God. Deut. reconciles the two ideas by saying that Jahweh first spoke the words unto all the assembly with a great voice, and then wrote them upon the stone (5²²). In v. 2, instead of 'house of slaves,' LXX has 'house of bondage' (so in Deut.)—a reading which is followed by our versions. The Heb. is better, for the term 'house of slaves' is used to designate the land of Egypt. In v. 3, LXX renders ἐξέτι, 'except me' (ἐλὼν μου) in Ex.; but in Dt 5⁷ B has 'before my face' (πρὸ προσώπου μου, Lat. in *conspetu meo*). The Eng. versions have 'before me' in the text, but RVm 'beside me.' The latter is a doubtful rendering, like the Prayer-Book form 'but me.' The words literally are 'upon my face,' and would most naturally mean 'in preference to me.' If that is the true sense, then this command represents a more primitive religious conception than the absolute monotheism of the prophetic age. Weiss holds that the words forbid the worship of all other gods (*Das Buch Exodus*, Graz, 1911).

In v. 4 (?) 'any likeness which is in the heavens' (an exactly literal tr.) gives no sense. LXX has παρὰ ὁμοίωμα (so in Deut.), and this is followed by Eng. versions. Kittel (*Bib. Heb.*, 1905) suggests לֹא תִהְיֶה, on the basis of LXX (cf. Dt 4²⁵). The reason for this prohibition is given at length in Dt 4¹⁶⁻¹⁹.

In v. 5 אֲנִי וְעַמִּי, LXX B has ἐγὼ τριτῶν, implying a reading γῆ instead of ἔγ. The Heb. is right. The absence of the conj. (though Deut. has it erroneously) shows that we have a case of apposition, i.e. 'upon the sons, upon the third and fourth generations.'

In v. 12 LXX has 'upon the good land' (ἐν τῇ γῇ τῇ ἀγαθῇ). The addition of 'good' sounds like Deut., and yet the reading is found only in Exodus.

In vv. 12-18 LXX A transposes here and in Deut., having the order: adultery, stealing, killing. The change may be accidental, or due to an idea that the Seventh Commandment is more closely related to the Fifth. The relation is not very obvious, and the LXX was not wont to take such liberties. There is much variation in the order of these three commandments. In MT, Jos., Syr., the order is murder, adultery, stealing; in Codex Alex. and Ambros., murder, stealing, adultery; in Codex Vat., adultery, stealing, murder. Peters holds that the original order was adultery, murder, stealing, which he says, 'commends itself on internal grounds' (op. cit. p. 23). It conjecture could govern, the present writer would prefer the order—murder, stealing, adultery—after some Gr. texts, on the ground that we have then a true sequence in the development of the moral standard. Murder was recognized as wrong long before adultery.

2. Real meaning of some of the commandments. —We turn now to the interpretation of some of the more difficult passages.

In the *Second Commandment* the meaning of the word 'thousands' is not altogether clear. In Dt 7⁹ we have apparently a commentary on this commandment: 'the faithful God, keeping the covenant and mercy to those who love him and keep his commands, to a thousand generations.' This interpretation was followed in the Targums, and has been generally accepted. Weiss, the latest writer on Exodus, takes this view. The contrast with 'third' and 'fourth' seems to support it. But the antithesis between the two clauses is not so clear

as appears at first sight. In the first part we have 'visiting the sins of the fathers'; in the second, 'showing the mercy of God.' In the one case God brings the consequences of paternal sins upon the sons, in the other He displays His own mercy to thousands. It appears, therefore, that 'thousands' is contrasted with 'sons,' not with 'third and fourth generation.' Further, *רַבְּבָיִם* never means 'a thousand generations'; it has two distinct meanings: a 'thousand' as a numeral, and a body of a thousand people, such as a regiment. In the latter connexion the word is used to indicate a subdivision of a tribe, and means a clan (cf. Jg 6¹⁵, 1 S 10¹⁹). The word here must either be a numeral, 'thousand,' or it must = 'clans.' The extension of mercy is therefore outward not downward. The sin goes down to the sons, the mercy goes outward to the whole family or clan.

'There's a wideness in God's mercy
Like the wideness of the sea.'

The meaning is illustrated in Abraham's plea for Sodom and Gomorrah (Gn 18²²⁻³²); if there had been ten righteous men in the city, the whole population might have been saved.

The *Third Commandment* is the vaguest of all: 'Thou shalt not take the name of Jahweh thy God in vain.' The moment we reflect upon the words, the vagueness appears. The usual interpretation is that it is an injunction against profanity. Weiss (*in loc.*) says that 'not only false swearing, but every sinful use of the name of Jahweh, in imprecation, blasphemy, charm, divination, and every frivolous use is included.' And yet it is a little difficult to discover that sense in the original. We should expect the Ten Words to deal with vital matters. There is no evidence that profanity was specially common among the Hebrews, or that they regarded it as a serious offence. From the concluding clause, 'Jahweh will not hold innocent' the one who commits this wrong, it is clear that we are dealing with a serious evil; in fact, with the unpardonable sin of the OT. Indeed, we might well render 'Jahweh will not forgive,' etc. It is at least a step in clearing up the matter to note that *אָמַר* means 'speak.' First there was the full expression, 'he lifted up his voice and spake,' then he 'lifted his voice,' finally 'he lifted,' but with the meaning 'spoke.'¹ *אֵין* means 'in vain,' i.e. without result (cf. Jer 2³⁰). We therefore have: 'Thou shalt not speak the name of Jahweh thy God without result,' i.e. without doing what was vowed in His name. Thus we can grasp the force of what is otherwise a pure redundancy, 'for Jahweh will not deem innocent him who speaks his name without result.' Now, if there was a principle cherished by the Hebrews above any other, it was the obligation to carry out a vow made in the name of Jahweh. We may note the case of Jephthah, who felt bound by his vow to sacrifice his daughter (Jg 11). Other cases will occur to the reader; and we find the principle strongly urged in Ec 5¹⁻⁶. It may be remarked that, so far as internal indications go, this command may be early. At all events the obligation was recognized in the primitive ages. It was the misuse of the command as above interpreted that our Lord sought to correct (cf. Mt 5³³⁻³⁷, 23¹⁶⁻²²). The Jews held that only a vow in Jahweh's name was binding; Jesus teaches that a man's personal word should be as strong an obligation as any oath.

3. *Original form of the Decalogue.*—It is apparent from a comparison of the texts that the Decalogue has not come down to us in its original

¹ Morgenstern holds that *nis iiii* in Bab. is a technical name for an oath, and that speaking the name of the gods was a sin for any but priests. He regards *אֵין* as an equivalent term, and the Third Commandment as having that meaning ('The Doctrine of Sin in the Bab. Religion,' *MFG*, iii. [1905] 85 f.). There is no evidence in the OT to support this view.

form.¹ Many attempts have been made to determine what that original form was. For the most part it is a matter of pure conjecture. But it has been noted that there is a persistent tradition that there were 'Ten Words,' and that they were inscribed on two tables of stone. It has been assumed that there would be practically an even division—five on each table.² The Decalogue divides into two parts, but Commandments 1-4 deal with man's relation to God, and 5-10 with his relations to men—not therefore an even division. In the Heb. text of Exodus, Comm. 1-5 contain 146 words, 6-10 contain 26 words. Taking the division by subject, 1-4 have 131 words, 6-10 have 41 words. Comm. 1-3 contain 76 words, 4-10 contain 96 words. This is the nearest approach to an even spatial division. Hence it is assumed that the commandments must originally have been all short, as 6-9 still are. Com. 2 then would have been simply: 'Thou shalt not make thee a graven image'; Com. 4: 'Remember the sabbath day to sanctify it'; and Com. 10: 'Thou shalt not covet.' This would make commands of sufficiently even length. The growth is easily explained. The images were hard to get rid of, as all religious usages are hard to change. To reinforce the law and to prevent evasions, amplification was necessary and dire consequences of disobedience must be added. Down to the time of Nehemiah the rule for cessation of labour on the sabbath day was disregarded (cf. Neh 13¹⁵⁻²²). Reasons were appended to the law to secure a stricter conformity.

While all this is very probable, the reason urged on the ground of an even division on the two tables is not convincing; for we have many ancient inscriptions on stone and clay, and there is no evidence of an attempt to conform the contents to the size of the material used for the inscription. The size of the characters and of the tablet is determined by the amount to be written. The commandments must have taken shape originally according to their substance, and could hardly have been framed with reference to two tables of stone. The only reason for using two stones was that there was not room enough on one, just as a correspondent takes up a second sheet when one does not suffice for his letter.

4. *How far Mosaic.*—A still more baffling problem is found in the origin of the Decalogue. In both codes it is attributed to Moses, i.e. Moses is the mouthpiece of Jahweh. In Dt 9. 10 there is an unusual wealth of detail about the matter, describing the first writing, the breaking of the stones, the second writing, and the care for the preservation of the final record. The Covenant and the Decalogue are certainly identified in the story, but that is, of course, due to the author of Deut., who lived long after Moses' day. His identification may be correct, but is not necessarily so.

We are obliged to face the question as to the value of this evidence. Now, we know that in the OT all Hebrew law is attributed to Moses, as practically all Hebrew psalmody was ascribed to David, and all wisdom to Solomon. There is, therefore, a presumption against this testimony; for it would be extraordinary if the whole body of a nation's laws were enacted by a single individual,

¹ The Rabbis were puzzled by the variants, but, as usual, were equal to the occasion, holding that both versions alike were of Divine origin, and were spoken miraculously at the same time. Saadya alleges that the Exodus version was on the first set of tables that were broken, and the Deut. text on the second (cited in *JE* iv. 494, s.v. 'Decalogue').

² The Rabbis indulged in their usual fanciful guesses about this distribution. Some held that all ten were on each stone; others that all ten were on each side of each stone; while Simai goes further and alleges that all ten were engraved four times on each stone (*JE*, *loc. cit.*). The idea was that the more times the words were inscribed the more important they were.

and that before there was any nation at all. The evidence, therefore, that Moses produced the Decalogue is no greater than that he produced the law governing the fringe on the priest's cloak. The persistent tradition proves, in the opinion of the present writer, that Moses was a truly great lawgiver; but, by ascribing all laws to him, it puts upon us the necessity of determining as best we can his connexion with any particular law. We are compelled, therefore, to consider whether the Decalogue could have come from so early a date as that of Moses.

Some of the prohibitions are of such a general character that they might belong to any period; such is the case with Comm. 3, 5-9. Others seem to have a closer relation to the development of religion, and a place for them ought to be found accordingly. Com. 1 is monotheistic, though perhaps not so sharply so as has generally been assumed; for the meaning may certainly be that no other god is to be set above Jahweh, and this possibility must have full weight (see above). So far as we know, the victory of monotheism was won by the prophets, one of the great battles being fought by Elijah. But it is certainly true that there were monotheists from the earliest days, such as Deborah, Gideon, and even the freebooter Jephthah. This law may have been as early as Moses for anything we know to the contrary.

The law against images does not belong to the same category. Image-worship was certainly practised down to the Exile, and as late as Hezekiah's time (2 K 18⁴), without rebuke. The war against it appears to have had as its main-spring the effort to centralize the worship at the temple in Jerusalem.¹ As a means of destroying the cult at the local shrines, where images abounded, they were forbidden, for there appear to have been no sacred images in Solomon's temple. It is true that disobedience to a law does not prove its non-existence. The teaching of Jesus about the perils of wealth has not made a very profound impression on the world even yet. But there was no strong motive for images, and it is difficult to think that David would have defied so fundamental a law (1 S 19¹³), or that Isaiah would have countenanced images (19¹⁹). This command, therefore, appears not to have been formulated long before the time of Deuteronomy.

In its present form, Com. 4 cannot be Mosaic. The nomad is never a very hard worker, and a day of rest is not of urgent necessity for him. Moreover, such work as he does is necessary on every day of the week. Further, in the time of Moses there were no guests (*gêrim*, 'protected strangers') within the gates. Sufficient emphasis does not appear to have been laid upon the term 'gates,' disclosing as it does urban life, and therefore belonging at the earliest to the period after the conquest. It is true that so acute a scholar as Weiss holds that *ꠔꠔ* may mean the gate of the camp as well as of the city, and he thinks, therefore, that this term does not presuppose the settlement in Palestine. But the only instance of this meaning that occurs to the present writer is Ex 32²⁸, where the word is a natural figure for 'entrance,' easily used by a writer familiar with gates. Moreover, the expression 'within thy gates' is a characteristic Deuteronomic expression, occurring some twenty times in Deut., and not found elsewhere in the Pent. save in Ex 20¹⁰. The solicitude for the stranger or guest is also Deuteronomic.

The silence about the sabbath day in the records

of the early days is truly remarkable from any point of view. In Jos 6^{14, 15} we read of the army's marching around Jericho on seven successive days, one of which must have been the sabbath. That looks very like 'any kind of work,' and was certainly unnecessary. There are, however, two references to the sabbath which throw welcome light on the situation. In 2 K 4²³ the Shunammite asks his wife why she is going to the prophet Elisha, and gives as the reason for his question 'it is not new moon and it is not sabbath.' It would be easy to draw too large a conclusion from this statement, but one thing is certain, viz. that there is no objection to a journey from Shunem to Carmel (30-40 kilometres, 20-30 miles; see Kittel, *Bücher der Könige*, 1900, *in loc.*) on the sabbath day; further, it is a reasonable inference that the sabbath was a day for religious rites, but that cessation of labour was not a part of its observance. Something like half a century later Amos makes the people say: 'When will the new moon be over that we may sell grain, and the sabbath that we may open up corn' (8²). It is clear that we have an advance from Elisha's time, in that trade is not permitted on the sabbath—precisely the conditions which Nehemiah enforced (Neh 13¹⁵⁻²²). The new moon is not mentioned in the Decalogue, but it is here, as in Elisha's time, on the same plane as the sabbath. There is hardly evidence, therefore, to support the existence of the Fourth Commandment. The passage may seem to imply that the sabbath had already come to be a mere form (Marti, *Dodekapropheten*, 1903, *in loc.*). But it is more likely that the prevention of trade was a new feature, not approved by the merchants; hence their impatience at the loss of trading days. It appears that under the prophetic influence a movement was making for a stricter regulation of both these festivals. The effort finally centred on the sabbath, and by Josiah's time all labour as well as trade was forbidden. The older idea always persisted, for Nehemiah did not attempt to check sabbath labour in the fields, but restrained trade even by threats of violence. Even to-day Sunday trading is objected to much more than Sunday labour.

Finally, Com. 10 cannot be Mosaic in its present form. In the Exodus version the first object whose coveting is forbidden is the house; in Deut. this is followed by the field. Nomads have neither houses nor fields. It is true that *ꠔꠔ* is often interpreted as meaning 'household' in Exodus. This use is very common, especially in the Hexateuch.¹ But it would be strange to say, 'Thou shalt not covet thy neighbour's family,' and then to continue, 'Thou shalt not covet thy neighbour's wife, and servants and cattle.' It is plain that in the time of Deut. *ꠔꠔ* was interpreted as meaning 'dwelling,' for it is not difficult to see why 'field' was added. As we have noted above, there was much taking of others' land even by violence. The oppressors might easily reconcile their aggressions and the law by saying they had not taken the house but only the field. The law is, therefore, amended to carry out its original intent. Doubtless the sweeping final clause, 'nor anything which is thy neighbour's,' was added to meet casuistical juggling. If the command was Mosaic, therefore, it could only have been in the form quoted by St. Paul, 'Thou shalt not covet' (Ro 7⁷). But here we meet a new difficulty. It is often urged that this law shows an ethical refinement too great for the period of Moses. Quite true. But it is not so sure that the refinement was too great for Moses, the man of God. The Decalogue does not profess to be a production showing the moral sentiment of the age, but is the work of the most enlightened man

¹ Wellhausen holds that the early Hebrews would object to a *ꠔꠔ*, 'image' (the word used in the Decalogue), but not to a *ꠔꠔꠔꠔ*, 'pillar' (*Reste Arab. Heid.* pp. 101, 141). It is difficult to see sufficient ground for this distinction.

¹ See the Hebrew lexicons.

of the time. Among a rude people it is always possible for one to rise head and shoulders above the rest, not only in stature, like Saul, but in moral insight, as Moses certainly did.

In a word, if we strip the Decalogue of the known later accretions, and the probable additions to meet new conditions, the Commandments may all be Mosaic except possibly the First, and almost certainly the Second. This is confessedly very far from affirming that they did come from the hand of the great lawgiver. Indeed, it is not unlikely that the Decalogue itself may be a growth covering a period of some centuries before the last addition was made. Various men may have tried their hand at putting the great principles of the Law into a terse and comprehensive form. All that we can say positively is that the Decalogue was complete some time before 621 B.C. (the date of Deut.), and that it has not survived in a standard and authoritative form. If it was originally issued on stone tablets, such a version is lost beyond present power of recovery.

There has never been agreement even as to the proper division of the material we have. In Deut. the command against coveting falls into parts, and Com. 1 may be regarded either as a part of the introduction, or less probably as part of the First Commandment, which here deals with images. This arrangement is followed by the Roman Catholic and Lutheran Churches to this day, while most Protestant bodies and the Greek Church adhere to the division in Exodus.¹

5. Theology and ethics of the Decalogue.—In its theology the first striking feature of the Decalogue is its monotheism. It is true that there is some doubt as to the meaning of the First Commandment, but, whatever its original meaning, it was ultimately interpreted as an uncompromising prohibition of the worship of any deity other than Jahweh. That is a necessary step in the development of any religion. Even some that are formally monotheistic are not really so. A prophet may be exalted to the place of a subordinate deity, as in Muhammadanism; or a saint may be made to stand so close to God that the distinction is unreal to the ordinary worshipper. In the lower forms of religion there is a tendency to divide the supposed Divine functions, and assume a deity to preside over each. In the Decalogue, even in its most primitive form, there is but one God, and all Divine offices are performed by Him. In the Deuteronomic form there is nothing which goes beyond nationalism. Jahweh is the only God in Israel. He brought them out of Egypt, and He ordained laws for them. In the later form, the thought of Jahweh as the God of the whole world is brought out in reference to creation.

The prohibition of image-worship puts the religion on a high plane. Though it was supposed that Jahweh could engrave stones, His image could not be made in stone. Jahweh was truly a spiritual being, too sublime to be represented in an image, and too great to be portrayed in the likeness of animal life. In the present form of Com. 2, idolatry is deemed the worst form of sin. It is this that arouses the jealousy of Jahweh, and calls down enduring punishment upon the offenders, and wide-spreading mercy to the innocent. Hating Jahweh is synonymous with idolatry, and loving Him is equivalent to spiritual devotion. This conception could hardly have come from the pre-prophetic period.

The ethical tone of the Decalogue is very high, especially if we assign it to the early period of national life. We note first the demand for truthfulness. Really this appears in both Comm. 3 and 9. No one was to swear to his neighbour and then disappoint him, no matter what the consequences might be—a command correctly interpreted in Ps

154;¹ and no one was permitted to bolster up a bad case against his neighbour by the introduction of false witnesses. Killing and stealing are fairly common vices among undeveloped races, and are far too prevalent even among the most advanced peoples. But the clear terse laws on the two tables, without any qualifications whatever, doubtless saved many a life in Israel, and helped to maintain personal property inviolate. The forbidding of coveting reaches the evangelical note (cf. Mt 5²³). It is hardly necessary to assume that coveting is as great a vice as stealing, or that a lustful desire is as degrading as a lustful act. But even in the early ages it must have been apparent that coveting leads to vicious action. Abimelech coveted the throne, and the murder of his seventy brothers resulted (Jg 9). Ahab coveted the land of Naboth, and the murder of Naboth and the confiscation of his land was the consequence (1 K 21). David's passions were aroused by the sight of a beautiful woman, and there followed the criminal death of Uriah and the unholy marriage with his widow (2 S 11).

The ethical standards of the world are still far too low, but it is certain that they would be even lower but for the great influence of the Ten Commandments. It is very desirable that they be stripped of later accretions, and in a simpler and more original form continue to be read to the people in the churches and taught to the children in the Sunday schools.

LITERATURE.—The student will naturally consult the various commentaries on Exodus and Deut., the Bible dictionaries and encyclopedias, and works on Hebrew religion. The following may also be consulted: G. L. Robinson, *The Decalogue and Criticism*, Chicago, 1899; R. Kraetzschmar, *Die Bundesvorstellung im AT*, Marburg, 1896; Meisner, *Der Dekalog*, Halle, 1893; B. Baentsch, *Das Bundesbuch*, Halle, 1892; N. Peters, *Die älteste Abschrift der zehn Gebote*, Freiburg i. B. 1905; F. W. Farrar, *The Voice from Sinai*, London, 1892; J. Oswald Dykes, *The Law of the Ten Words*, do., 1884; E. Kautzsch, art. 'Religion of Israel,' in *HDB*, vol. v. p. 612.

DECISION.—The term 'decision' may be used (1) concretely, of the judgment which is affirmed at the conclusion of a period of deliberation (*q.v.*); or (2) abstractly, of the ability to 'come to a decision,' *i.e.* to bring deliberation to a conclusion.

Decisions are as various in kind as the subjects about which we deliberate. Thus the judge issues his decision—that a charge is proved or not proved; a connoisseur decides that he prefers one wine to another. Decisions which consist in the resolve that a certain kind of action is to be performed by oneself seem to form a class apart. It is in connexion with these that the strife between necessitarians and libertarians has been waged. This, however, is a controversy affecting the determination of content of the judgment which is a decision, *i.e.* the quality of the conduct decided on. Though extreme necessitarians declare that every decision is mechanically determined, no one denies the reality of decision as a psychological crisis. This crisis consists in a concentration of the attention on the idea of one of the possible courses of action before us, with a consequent inhibition of the ideas of the other possibilities. Recent advocates of the doctrine of free will (*q.v.*) base their argument upon the feeling of effort which accompanies a typical class of decisions. See, further, **DESIRE, WILL.**

LITERATURE.—W. James, *Text-book of Psychology*, London, 1892, pp. 415-460; W. M. Wundt, *Human and Animal Psychology*, Eng. tr., 1901, p. 233. G. R. T. ROSS.

¹ This is finely brought out in the Prayer-Book version: 'He that sweareth unto his neighbour, and disappointeth him not, though it were to his own hindrance.' This is a conflate reading. The Heb. has: 'He that sweareth to his own hurt'; the Greek: 'He that sweareth to his neighbour.' The liturgical version contains both readings. See Perowne (*Psalms*², London, 1895) on the passage.

¹ There are really three uses, the Jews taking the preface as Com. 1. For the details, see art. 'Decalogue,' in *HDB* i. 580.

and that before there was any nation at all. The evidence, therefore, that Moses produced the Decalogue is no greater than that he produced the law governing the fringe on the priest's cloak. The persistent tradition proves, in the opinion of the present writer, that Moses was a truly great lawgiver; but, by ascribing all laws to him, it puts upon us the necessity of determining as best we can his connexion with any particular law. We are compelled, therefore, to consider whether the Decalogue could have come from so early a date as that of Moses.

Some of the prohibitions are of such a general character that they might belong to any period; such is the case with Comm. 3, 5-9. Others seem to have a closer relation to the development of religion, and a place for them ought to be found accordingly. Com. 1 is monotheistic, though perhaps not so sharply so as has generally been assumed; for the meaning may certainly be that no other god is to be set above Jahweh, and this possibility must have full weight (see above). So far as we know, the victory of monotheism was won by the prophets, one of the great battles being fought by Elijah. But it is certainly true that there were monotheists from the earliest days, such as Deborah, Gideon, and even the freebooter Jephthah. This law may have been as early as Moses for anything we know to the contrary.

The law against images does not belong to the same category. Image-worship was certainly practised down to the Exile, and as late as Hezekiah's time (2 K 18⁴), without rebuke. The war against it appears to have had as its main-spring the effort to centralize the worship at the temple in Jerusalem.¹ As a means of destroying the cult at the local shrines, where images abounded, they were forbidden, for there appear to have been no sacred images in Solomon's temple. It is true that disobedience to a law does not prove its non-existence. The teaching of Jesus about the perils of wealth has not made a very profound impression on the world even yet. But there was no strong motive for images, and it is difficult to think that David would have defied so fundamental a law (1 S 19¹³), or that Isaiah would have countenanced images (19¹⁹). This command, therefore, appears not to have been formulated long before the time of Deuteronomy.

In its present form, Com. 4 cannot be Mosaic. The nomad is never a very hard worker, and a day of rest is not of urgent necessity for him. Moreover, such work as he does is necessary on every day of the week. Further, in the time of Moses there were no guests (*gērīm*, 'protected strangers') within the gates. Sufficient emphasis does not appear to have been laid upon the term 'gates,' disclosing as it does urban life, and therefore belonging at the earliest to the period after the conquest. It is true that so acute a scholar as Weiss holds that *ꠔꠔ* may mean the gate of the camp as well as of the city, and he thinks, therefore, that this term does not presuppose the settlement in Palestine. But the only instance of this meaning that occurs to the present writer is Ex 32²⁶, where the word is a natural figure for 'entrance,' easily used by a writer familiar with gates. Moreover, the expression 'within thy gates' is a characteristic Deuteronomic expression, occurring some twenty times in Deut., and not found elsewhere in the Pent. save in Ex 20¹⁰. The solicitude for the stranger or guest is also Deuteronomic.

The silence about the sabbath day in the records

of the early days is truly remarkable from any point of view. In Jos 6^{4, 14, 15} we read of the army's marching around Jericho on seven successive days, one of which must have been the sabbath. That looks very like 'any kind of work,' and was certainly unnecessary. There are, however, two references to the sabbath which throw welcome light on the situation. In 2 K 4²³ the Shunammite asks his wife why she is going to the prophet Elisha, and gives as the reason for his question 'it is not new moon and it is not sabbath.' It would be easy to draw too large a conclusion from this statement, but one thing is certain, viz. that there is no objection to a journey from Shunem to Carmel (30-40 kilometres, 20-30 miles; see Kittel, *Bücher der Könige*, 1900, *in loc.*) on the sabbath day; further, it is a reasonable inference that the sabbath was a day for religious rites, but that cessation of labour was not a part of its observance. Something like half a century later Amos makes the people say: 'When will the new moon be over that we may sell grain, and the sabbath that we may open up corn' (8¹). It is clear that we have an advance from Elisha's time, in that trade is not permitted on the sabbath—precisely the conditions which Nehemiah enforced (Neh 13¹⁵⁻²²). The new moon is not mentioned in the Decalogue, but it is here, as in Elisha's time, on the same plane as the sabbath. There is hardly evidence, therefore, to support the existence of the Fourth Commandment. The passage may seem to imply that the sabbath had already come to be a mere form (Marti, *Dodekapropheten*, 1903, *in loc.*). But it is more likely that the prevention of trade was a new feature, not approved by the merchants; hence their impatience at the loss of trading days. It appears that under the prophetic influence a movement was making for a stricter regulation of both these festivals. The effort finally centred on the sabbath, and by Josiah's time all labour as well as trade was forbidden. The older idea always persisted, for Nehemiah did not attempt to check sabbath labour in the fields, but restrained trade even by threats of violence. Even to-day Sunday trading is objected to much more than Sunday labour.

Finally, Com. 10 cannot be Mosaic in its present form. In the Exodus version the first object whose coveting is forbidden is the house; in Deut. this is followed by the field. Nomads have neither houses nor fields. It is true that *ꠔꠔ* is often interpreted as meaning 'household' in Exodus. This use is very common, especially in the Hexateuch.¹ But it would be strange to say, 'Thou shalt not covet thy neighbour's family,' and then to continue, 'Thou shalt not covet thy neighbour's wife, and servants and cattle.' It is plain that in the time of Deut. *ꠔꠔ* was interpreted as meaning 'dwelling,' for it is not difficult to see why 'field' was added. As we have noted above, there was much taking of others' land even by violence. The oppressors might easily reconcile their aggressions and the law by saying they had not taken the house but only the field. The law is, therefore, amended to carry out its original intent. Doubtless the sweeping final clause, 'nor anything which is thy neighbour's,' was added to meet casuistical juggling. If the command was Mosaic, therefore, it could only have been in the form quoted by St. Paul, 'Thou shalt not covet' (Ro 7⁷). But here we meet a new difficulty. It is often urged that this law shows an ethical refinement too great for the period of Moses. Quite true. But it is not so sure that the refinement was too great for Moses, the man of God. The Decalogue does not profess to be a production showing the moral sentiment of the age, but is the work of the most enlightened man

¹ Wellhausen holds that the early Hebrews would object to a *ꠔꠔ*, 'image' (the word used in the Decalogue), but not to a *ꠔꠔꠔꠔ*, 'pillar' (*Reste Arab. Heid.*, pp. 101, 141). It is difficult to see sufficient ground for this distinction.

¹ See the Hebrew lexicons.

of the time. Among a rude people it is always possible for one to rise head and shoulders above the rest, not only in stature, like Saul, but in moral insight, as Moses certainly did.

In a word, if we strip the Decalogue of the known later accretions, and the probable additions to meet new conditions, the Commandments may all be Mosaic except possibly the First, and almost certainly the Second. This is confessedly very far from affirming that they did come from the hand of the great lawgiver. Indeed, it is not unlikely that the Decalogue itself may be a growth covering a period of some centuries before the last addition was made. Various men may have tried their hand at putting the great principles of the Law into a terse and comprehensive form. All that we can say positively is that the Decalogue was complete some time before 621 B.C. (the date of Deut.), and that it has not survived in a standard and authoritative form. If it was originally issued on stone tablets, such a version is lost beyond present power of recovery.

There has never been agreement even as to the proper division of the material we have. In Deut. the command against coveting falls into parts, and Com. 1 may be regarded either as a part of the introduction, or less probably as part of the First Commandment, which here deals with images. This arrangement is followed by the Roman Catholic and Lutheran Churches to this day, while most Protestant bodies and the Greek Church adhere to the division in Exodus.¹

5. Theology and ethics of the Decalogue.—In its theology the first striking feature of the Decalogue is its monotheism. It is true that there is some doubt as to the meaning of the First Commandment, but, whatever its original meaning, it was ultimately interpreted as an uncompromising prohibition of the worship of any deity other than Jahweh. That is a necessary step in the development of any religion. Even some that are formally monotheistic are not really so. A prophet may be exalted to the place of a subordinate deity, as in Muhammadanism; or a saint may be made to stand so close to God that the distinction is unreal to the ordinary worshipper. In the lower forms of religion there is a tendency to divide the supposed Divine functions, and assume a deity to preside over each. In the Decalogue, even in its most primitive form, there is but one God, and all Divine offices are performed by Him. In the Deuteronomic form there is nothing which goes beyond nationalism. Jahweh is the only God in Israel. He brought them out of Egypt, and He ordained laws for them. In the later form, the thought of Jahweh as the God of the whole world is brought out in reference to creation.

The prohibition of image-worship puts the religion on a high plane. Though it was supposed that Jahweh could engrave stones, His image could not be made in stone. Jahweh was truly a spiritual being, too sublime to be represented in an image, and too great to be portrayed in the likeness of animal life. In the present form of Com. 2, idolatry is deemed the worst form of sin. It is this that arouses the jealousy of Jahweh, and calls down enduring punishment upon the offenders, and wide-spreading mercy to the innocent. Hating Jahweh is synonymous with idolatry, and loving Him is equivalent to spiritual devotion. This conception could hardly have come from the pre-prophetic period.

The ethical tone of the Decalogue is very high, especially if we assign it to the early period of national life. We note first the demand for truthfulness. Really this appears in both Comm. 3 and 9. No one was to swear to his neighbour and then disappoint him, no matter what the consequences might be—a command correctly interpreted in Ps

154;¹ and no one was permitted to bolster up a bad case against his neighbour by the introduction of false witnesses. Killing and stealing are fairly common vices among undeveloped races, and are far too prevalent even among the most advanced peoples. But the clear terse laws on the two tables, without any qualifications whatever, doubtless saved many a life in Israel, and helped to maintain personal property inviolate. The forbidding of coveting reaches the evangelical note (cf. Mt 5²³). It is hardly necessary to assume that coveting is as great a vice as stealing, or that a lustful desire is as degrading as a lustful act. But even in the early ages it must have been apparent that coveting leads to vicious action. Abimelech coveted the throne, and the murder of his seventy brothers resulted (Jg 9). Ahab coveted the land of Naboth, and the murder of Naboth and the confiscation of his land was the consequence (1 K 21). David's passions were aroused by the sight of a beautiful woman, and there followed the criminal death of Uriah and the unholy marriage with his widow (2 S 11).

The ethical standards of the world are still far too low, but it is certain that they would be even lower but for the great influence of the Ten Commandments. It is very desirable that they be stripped of later accretions, and in a simpler and more original form continue to be read to the people in the churches and taught to the children in the Sunday schools.

LITERATURE.—The student will naturally consult the various commentaries on Exodus and Deut., the Bible dictionaries and encyclopædias, and works on Hebrew religion. The following may also be consulted: G. L. Robinson, *The Decalogue and Criticism*, Chicago, 1899; R. Kraetzschmar, *Die Bundesvorstellung im AT*, Marburg, 1896; Meisner, *Der Dekalog*, Halle, 1893; B. Baentsch, *Das Bundesbuch*, Halle, 1892; N. Peters, *Die älteste Abschrift der zehn Gebote*, Freiburg i. B. 1905; F. W. Farrar, *The Voice from Sinai*, London 1892; J. Oswald Dykes, *The Law of the Ten Words*, do., 1884; E. Kautzsch, art. 'Religion of Israel,' in *HDB*, vol. v. p. 612.

L. W. BATTEN.

DECISION.—The term 'decision' may be used (1) concretely, of the judgment which is affirmed at the conclusion of a period of deliberation (*q.v.*); or (2) abstractly, of the ability to 'come to a decision,' i.e. to bring deliberation to a conclusion.

Decisions are as various in kind as the subjects about which we deliberate. Thus the judge issues his decision—that a charge is proved or not proved; a connoisseur decides that he prefers one wine to another. Decisions which consist in the resolve that a certain kind of action is to be performed by oneself seem to form a class apart. It is in connexion with these that the strife between necessitarians and libertarians has been waged. This, however, is a controversy affecting the determination of content of the judgment which is a decision, i.e. the quality of the conduct decided on. Though extreme necessitarians declare that every decision is mechanically determined, no one denies the reality of decision as a psychological crisis. This crisis consists in a concentration of the attention on the idea of one of the possible courses of action before us, with a consequent inhibition of the ideas of the other possibilities. Recent advocates of the doctrine of free will (*q.v.*) base their argument upon the feeling of effort which accompanies a typical class of decisions. See, further, **DESIRE, WILL.**

LITERATURE.—W. James, *Text-book of Psychology*, London, 1892, pp. 415-460; W. M. Wundt, *Human and Animal Psychology*, Eng. tr., 1901, p. 233. G. R. T. ROSS.

¹ There are really three uses, the Jews taking the preface as Com. 1. For the details, see art. 'Decalogue,' in *HDB* i. 580.

¹ This is finely brought out in the Prayer-Book version: 'He that sweareth unto his neighbour, and disappointeth him not, though it were to his own hindrance.' This is a confate reading. The Heb. has: 'He that sweareth to his own hurt'; the Greek: 'He that sweareth to his neighbour.' The liturgical version contains both readings. See Perowne (*Psalms*, London, 1893) on the passage.

DECOLLATI.—The full expression is *le anime dei corpi decollati*, 'the souls of executed criminals.' These souls are the object of a popular cult in Sicily. It is spread throughout the island; but its most famous shrine is the Church of the Decollati, near the river Oreto at Palermo. It seems to have arisen out of the sympathy naturally felt in an oppressed community for sufferers at the hands of a ruling caste. For many centuries Sicily was subject to rulers who were either foreigners, or at any rate divided by a sharp and impassable line from the mass of the people. The latter were ignorant, and more or less passively hostile to the governing class. They regarded all who were put to death under the forms of law as heroes; nor did they distinguish between moral and merely legal crimes,—between acts directed against the rulers and acts directed against society at large,—if, indeed, these two categories were always distinguishable. The priests were for the most part drawn from the 'folk,' and probably shared to a great extent their ignorance, their superstitions, and their feeling towards the government. The executions were public. The condemned man (called *l'affitto*, 'the afflicted'), having been reconciled to the Church and having received its consolations, was regarded as a martyr; and his death-scene was a species of triumph. He passed, it was true, into purgatory; but his prayers on behalf of others, even from purgatory, were deemed to have great intercessional value by virtue of his sufferings.

Formerly at Palermo several of the churches witnessed the cult of the Decollati. During recent centuries, however, it became the custom to bury in the graveyard adjoining the little church beside the Oreto such bodies of criminals as were not given to their friends, or reserved to adorn the gallows in chains. Accordingly, the cult has concentrated there. Its particular shrine is a side-chapel filled with votive offerings of wax, testifying to the various benefits for which the intercession of the Decollati is sought. The souls of the Decollati are believed to congregate under a large stone just inside the door of the chapel. Pilgrimages are frequent; and the pilgrim, having performed his devotions at the altar of St. John the Baptist, adjourns to the chapel and prays to the Decollati, listening for an answer to the prayer. The slightest sound is taken for a favourable reply. Invocations, however, may be addressed to them elsewhere by suppliants who cannot undertake the pilgrimage.

The objects for which intercession is sought are primarily protection from violence or accident, and the cure of sufferers from either. For the Decollati, however much they may in their lifetime have been guilty of violence, now having suffered and been reconciled to the Church, hate violence and punish it, or at least protect and heal its victims. By an extension of the idea, they are invoked against diseases, especially hæmoptysis, of which bleeding is the manifestation. Two long cases of rude water-colour drawings on the churchyard walls record with ghastly detail many examples of vows made and benefits received, where violence, accident, or disease of the kinds indicated was concerned. But, in fact, the good offices of the Decollati are not limited to these. They are implored for aid by the poorer classes throughout Sicily on all sorts of occasions, and for all sorts of purposes. They have their prayer-formulæ, which are extensively used; and many stories of miracles performed by them in person are current. The ordinary vehicles of the country are light carts, painted with scenes from the history and traditions of the island. Many of these carts are adorned with paintings of the Decollati.

LITERATURE.—The cult has been described and illustrated with many details by Giuseppe Pitrè, the venerable recorder of the insular traditions and customs. See particularly his *Biblioteca delle tradizioni popolari siciliane*, i. (Palermo, 1871) 77, ii. (1871) 33, xvi. (1889) 4 ff., *La Vita in Palermo*, ii. (Palermo, 1905) ch. xviii., *Mostr. etnografica siciliana* (Palermo, 1892), 61, 80. See also a paper by the present writer, with plates from photographs, in *FL* xxi. (London, 1910) 168.

DECRETALS.—See **BULLS AND BRIEFS**.

DEDICATION.—See **CONSECRATION**.

DEGENERATION.—1. Application of the term.—'Mental degeneracy' is a term which is applied to a group of characteristics inferred from the speech, behaviour, or productive activity of individuals, and generally held to be symptomatic of defect in the central nervous system. The nervous defect in question may be either congenital or acquired through accident or disease; in either case, it may be organic or 'functional.' Savill (*Neurasthenia*, 17) defines a functional nervous disease negatively, as one in which 'no anatomical changes can be found after death, either with the naked eye or with the microscope, which can account for the symptoms during life.' It may really be due to some structural change, which available means cannot determine, to the presence of toxic materials in the blood (of endogenous or exogenous origin), to deficient quantity or quality of blood, or to exhaustion of the nerve tissues from excessive use, etc.

The term also implies that the individual falls markedly below the mental level attained by the average or normal member of the race, sex, age, and period of civilization; but, since the number of degrees of defect is potentially infinite, and the defect may be either general or special (in the former case touching all the mental capacities, in the latter such special functions as sensation, memory, emotion, etc.), the actual usage of the term is extremely indefinite. Thus it is employed to denote (1) actual insanity, including amnesia, imbecility, dementia, mania, and melancholia; (2) persistent criminality; (3) mental instability, excitability, excessive irritability, or mere eccentricity; and (4) the neuroses of hysteria, psychasthenia, and others: to the last two groups belong those whom Dr. Balfour has named the 'denizens of the borderland' (*Edin. Med. Journ.* 1901). It would seem that strictly the word should apply only to those who have some congenital defect in mental capacity, excluding those in whom the defect has been due either to accidental injury, or to lesions of the brain arising from toxic influences, subsequent to the birth of the individual (for example, alcoholic insanity, or insanity sequent upon typhus fever). It is impossible, however, to draw a hard and fast line between the congenital and the acquired, as many cases of insanity would not have occurred had not the individual been already predisposed to the disease by physiological or mental weakness. On the other hand, the term is also frequently applied to an acquired defect, especially when it is of the progressive type.

In popular usage the word 'degenerate' means one whose tastes are lower than those of the society in which he has been educated, e.g. a clergyman's son who associates with racing touts or public-house loafers; or one whose intelligence and tastes show a marked deterioration from his own earlier standard, as in alcoholism, etc. It is applied aesthetically to those whose interests, whether as readers or as authors, as artists or as critics, lie in disease, physical or moral; to realists or naturalists in the narrow sense of these words; and also to pessimists. The assumption is that the healthy

mind will avoid these things as topics of thought or imagination, except with the object of removing them or lessening their evil effects; that only the diseased mind will seek to dwell upon disease, or take a pleasure in its contemplation.

To the biologist, the degenerate appears as a reversion to an older type of the race, as one who has been born with a physical nature in which some primitive human or even pre-human stage of cerebral development is reproduced. He is a primitive being set in a civilized environment, unable to adapt himself to it, and hence coming into conflict with its conditions.

The only common feature underlying these diverse applications of the term is a marked 'deviation from type' either in quantity (energy, rate, etc.), or in quality, of thought and action.

2. Physical and mental conditions of degeneracy.

—The causes of such mental deviations may be grouped in three classes: (1) an originally defective physical and mental capacity, or defective development; (2) physical accident or injury, disease, privation, etc., by which the central nervous system is weakened locally or generally; and (3) social conditions, such as family life, educational disadvantages, poverty, occupation, etc. (Ferri, *Criminal Sociology*, Eng. tr., London, 1895, ch. 2). Thus, alcoholism may occur in a given individual because he is by nature unstable, excitable, pleasure-loving; because his brain has been weakened by an exhausting disease; through mere imitation of heavy-drinking companions; from lack of employment, unbearable home life, or other social conditions; or from any combination of such factors—the result in each case being a gradual deterioration of the nervous system, by which the original tendency is strengthened, until the control of the will is destroyed.

The relation between mental and physical defect is by no means so clear or so simple as is commonly assumed. It is argued that, with the exception of those relatively few cases in which the disorder can be traced to some definite accident, such as a fall or blow upon the head, or to some virulent fever which has been caught by infection, it invariably arises from a congenitally defective disposition of the nervous system; this defect or weakness predisposes to insanity, so that any physical or mental shock which might leave a healthy individual uninjured overthrows the balance of such subjects and renders them insane. They suffer from what Maudsley (*Body and Mind*, 43) has called 'the worst of all tyrannies, the tyranny of a bad organization.' The result of this organization may be that the normal development cannot be completed, that the subject remains at a lower level, mentally and physically, than his more fortunate brethren; hence either definite idiocy, insanity, or some of the minor forms of defect already referred to. In cases of idiocy there is almost invariably some malformation of the brain, whether in its size, in its shape, or in the complexity of the convolutions (the brains of many idiots remaining as smooth as those of the higher apes); the result is an arrested development, and a disproportionate growth of the different parts of the system, which, under the principle of 'recapitulation,' suggest a reversion to, or a stopping short at, some stage in the animal ancestry of the human individual. Popular superstition has always recognized a close relationship between mental defect and congenital physical deformity; Shakespeare's 'stigmatic' contains both the modern name and the modern idea (the 'stigmata' of the insane, of the criminal, of the hysterical temperament). From Hippocrates onwards many have insisted that in a great number of persons the predisposition to insanity is inherited,

and hence that slighter causes are sufficient to produce its onset than in other persons; moreover, that this predisposition may be inherited from parents not necessarily insane, but only nervously diseased; the contrary is also true—mere nervous disease in the child corresponding to and connected with insanity in the parents or near ancestors. In 'degenerate' families there is a tendency for this degeneracy to be progressively worse from generation to generation, until ultimately sterility appears, leading to the extinction of the degenerate race (Talbot, ch. 1). Moreau-de-Tours renewed the old thesis that genius is twin brother to madness, both being in many cases derived from the same parentage, and argued that degenerate types often represent throw-backs or reversions to more primitive types of evolution. The principal application given to this doctrine has been in the theory of criminality, of which Lombroso was the chief exponent, viz. that the criminal is born, not made, that (passion and accident apart) crimes spring from natures in which both the physical and the mental characteristics are those of primitive man, or, it may be, of the ape. The physical stigmata of the 'congenital criminal'—deformity of skull, sloping forehead, prominent cheekbones and projecting jaw, large ears, small deep-set and 'shifty' eyes, irregular dentition, cleft palate, stammering, etc.—are not now so seriously taken, and, according to Lugaro (p. 17), the anthropological theory, whether applied to insanity or to crime, is 'a thing of the past.' It is true that both the criminal and the idiot or imbecile are more liable to diseases, such as phthisis, etc., than the normal individual, and have many other physiological deficiencies; while statistics have been frequently compiled to show the apparent transmission from parent to child of the 'criminal temperament,' and its hereditary relationship with imbecility and insanity. From such data, however, even if we exclude the immeasurable influence of environment, physical and social, it can be argued only that *some* nervous deficiency is transmitted, which disposes, under 'favourable' conditions, to insanity, crime, or mental instability.

Against the physical theory of degeneracy (as an all-sufficient account), there may be pointed out the frequency with which mental causes produce, or at least initiate, a change of intellectual or moral character, e.g. emotional shock, disappointment, loss of occupation or of means, death of husband, wife, or child, social degradation, religious emotion, school strain, privation, prolonged worry, etc. It is by no means necessary that a hereditary or congenital *physical* predisposition should exist in all cases; thus, a shock coming closely upon or during an illness or exhaustion, or a period of insomnia, may give all the conditions necessary for the outbreak of insanity. The influence of the mind upon the production of insanity was fully recognized by Pinel in 1801, and by others after him. The evolution theory gave, however, a stronger hold to the *organic* theory of mental disease, and its connexion with heredity, so that this view is now practically universal. It is clear that such disease is always a product of two factors—a predisposition on the one hand, physical or mental; and, on the other, a shock or a stress leading to the actual appearance of the insanity or mental defect. Thus the physiologically critical periods of life are those at which outbreaks of insanity are most frequent—first and second dentition, puberty, adolescence, the climacteric, etc. Of course, if we assume from the first that mind is never an agent of bodily changes, but always their mere concomitant or their effect, then mental degeneracy cannot but be the sign or symptom of physical degeneracy, which is the

reality underlying all the phenomena. On the other hand, it may with equal plausibility be argued that the real factor is the *mental disposition*, the fundamental mode of *feeling* and of *reacting* upon impressions, which has a characteristic form and degree in every individual, but is variously modified by the *temporary disposition* which arises in connexion with bodily states—fatigue, exhaustion, illness, etc. A shock or stress will disturb the mind more or less, according to its fundamental and temporary disposition at the period when the strain comes. Without prejudice to any theory of the relation of body to mind, it may be admitted that actions are the outcome of the dominant feeling or emotion, which in its turn is mainly a product of perceptions and reproductions or memories; hence in human conduct the mental life predominates over the physiological: and this is especially the case after the child has become able to appreciate moral ideas. It is not denied that the physical nature has an immense influence in the causation of insanity.¹ But it is claimed (1) that this physical nature may be largely modified by education and by suggestion; (2) that it may itself be of a mental origin either in the ancestors or in the individual; (3) that the outbreak of insanity is almost invariably caused by mental factors, including, for example, emotional shock or mental contagion (as in imitative insanity); and (4) that the insanity may be cured by suggestion and other mental measures, in addition to physical hygiene (Dubois, in *Archives de psychologie*, x. [1910] 1: 'Psychological Conception of the Origin of Psychopathies').

3. Symptoms of mental degeneracy.—The manifold forms in which mental degeneracy expresses itself may be illustrated from the two most important 'functional' diseases—hysteria and psychasthenia.

(i.) *Hysteria* has been defined as a 'morbid mental condition in which ideas control the body and produce morbid changes in its functions' (Dana, *Journ. of Abnormal Psychol.*, Feb. 1907). Its most prominent features are anaesthesia, amnesia, loss of control over the attention, paralysis of certain muscles. (1) The anaesthesia may be the loss of sensibility in the whole of a special sense (e.g. blindness) without any injury either to the sense-organ or to the conducting nerve-fibres; or it may be partial (monocular blindness; narrowing of the field of vision in both eyes; colour-blindness), or systematic (loss of power to perceive certain persons or classes of objects, while the sensibility is otherwise intact). A historical illustration is the 'devil's marks' on the skin, by the insensibility of which a woman's guilt in trials for witchcraft was often determined. The insensibility differs from that which is due to nerve-injury, in that it is not permanent, but varies; it is, for example, sometimes removed during sleep, or under the influence of chloroform, or in the hypnotic trance, while emotional excitement of any kind is said to intensify it. Also the insensibility does not correspond to the distribution of a particular nerve or group of nerves; many of the reflexes are preserved in connexion with the sense-organ, while the insensible limb is not liable to accident or to injury, as is the case with insensibility arising from a severed nerve. It has been

proved also that, while the subject is unaware of the existence of such anaesthesias, and therefore does not, of course, notice the impressions which are made on the insensitive organs, these are nevertheless recorded, and may be later brought to consciousness, e.g. when the patient is hypnotized; these and many similar facts show that the seat of the anaesthesia is not in the sense-organ but in the central organ, the cerebrum. *Physiologically* the impression is made on the nervous system, but it is, under the special conditions, unable to effect consciousness, as in other conditions it would (Janet, *L'État mental des hystériques*, p. 20 ff.).

(2) A further group of symptoms is found in the *amnesias*, which also almost always accompany hysteria. The memory may be defective in one or more of many different ways; it may simply show weakness, the subject being unable to remember events of recent occurrence, or material which has been learned, with the same vividness, accuracy, and completeness as a normal individual; or the defect may be specialized so that particular qualities or classes of experiences can no longer be recalled at all; for example, visual memories, or auditory memories, or the memory of actions; and within any one of these groups there may be specialization: in the visual group the patient may be unable to recall the colours of objects, while remembering their forms and their light and shade; in the auditory group, he may remember spoken words, but not melodies or tones, etc. Or the lapse of memory may be systematized, and this also in two ways: (a) with reference to the time-series; a period of life may be wholly forgotten—sometimes a recent period, sometimes a more distant one, while events before and after this period are remembered with distinctness; (b) with reference to systems of knowledge, as, for example, when the power of reading lapses, or the memory for a particular language, or a particular science, etc.; still more completely systematized are the cases in which a particular object or person, formerly familiar, is no longer remembered.

(3) The will and power of attention may be affected. There may be excessive concentration on one impression or idea, or there may be incapacity to concentrate the attention upon *any* impression or idea; in the former case we have an approximation to the state of melancholia, in the latter case to the state of mania or the insane flight of ideas. Whether the span of attention is narrow or wide, a subject may be distracted from a task by the slightest stimuli, and hence be unable to learn new material or to complete any task attempted by him; on the other hand, even though the attention be unconcentrated, it may still be excessively persistent, just as in ordinary experience a weak-willed individual may on occasions reveal the utmost obstinacy of character. Education and development are mainly a function of the power to direct the attention, at will, to objects uninteresting in themselves, or for the moment uninteresting to the individual: this power the hysteric patient possesses to a minimum degree. His attention is easily caught by sensory impressions which fall within his field of morbid interest, by ideas which enter the mind through purely casual associations (associations of contiguity, of similarity of sound, or the like), but is not caught or held by ideas of deeper logical value. As the attention decides which of the many ideas that are clamouring on the margin of consciousness shall enter its focus and become determinative of the course of our actions and of the course of our thoughts, so in hysteria the level of thought and action falls. Words suggest thoughts through their sound (punning, rhyming words) rather than through their meaning; actions are decided by

¹ Cf. Lugaro, p. 22: 'The functional insufficiency of a shrunk gland in the neck causes the syndrome of cretinism. Slight but chronic lesions of the kidneys can determine conditions of stupidity, temporary loss of speech, and violent attacks of confusion and agitation. A febrile malady occurring in infancy, though transient, attracting little notice, and passing away almost unobserved, can ruin the brain beyond repair. The effects of this may either manifest themselves as moral and intellectual defects of every degree, or as epileptic convulsions which may appear after many years, and by their repetition progressively destroy the mind.'

sensations or simple associative images rather than by systematized tendencies built upon experience; originality and spontaneity are replaced by banality or by automatism.

(4) On the motor side, there is frequently paralysis, or *paresis*, inability or weakness in the use of the limbs on one side of the body, or of a particular limb or organ, or a particular muscle; and (5) usually also disturbances, of 'nervous' origin, in the circulatory and other functions of the body—asthma, vertigo, palpitation, fainting, congestion, etc. Sometimes a power is exercised over these functions, which to the normal individual appears impossible: e.g. control of the heart, or of the digestive processes, ability to hasten or retard them at will. Both the muscular and the organic defects or abnormalities are, like the anæsthesias, of purely central origin; i.e. they spring directly from some temporary and local change in the cerebral system—a change which, however, has probably a mental origin.

The different phenomena in a particular case may usually be traced to a single system of ideas, which has obtained an undue control over the personality—for example, the memory, conscious or suppressed, of some emotionally exciting event or experience. Cure is sometimes effected by suggestion, which strengthens the power of the personality over the ideas, sometimes by a shock or accident calling up the dormant energies of the individual: thus in one case (Donaldson, *Growth of Brain*, London, 1895, p. 304, from Taylor, *Journ. of Nerv. and Ment. Dis.*, 1888) a lady recovered from a hysteric paralysis on the sudden death of her husband; in another, a cure resulted from the elopement of a daughter. For the most part, however, almost any stimulus is enough to re-excite the dominant idea, and to determine thought and action according to it. Thus a man who had been lost in the Australian Bush, and in the agony of thirst had frequently plunged into imaginary pools of water, used, long after his rescue, under the slightest dose of alcohol, to go automatically through the actions of diving, regardless of the surroundings or of the position in which he was. There is, for the most part, some such absorption by, or fixation of the mind upon, the compelling thought, with entire failure to correlate it with the immediately given sensations and impressions, or to criticize it by them. Epidemics of hysteria or insanity are common among peoples or races at a low level of development, or who suffer from insufficient nutrition (J. M. Clarke, 'On Hysteria,' *Brain*, xv. [1892] 526).

A well-known case is that of Haute-Savoie, 1857, in which a young girl saw a companion taken out of a stream half-drowned; the girl fell down in unconsciousness, and a few days later a friend who was with her became similarly affected. Other hysterical phenomena followed. Within four years there were 120 persons in the same neighbourhood affected in the same way, and this in spite of the fact that public exorcisms were held by the priest. The epidemic was stopped 'by the Government sending a force of gens d'armes to the district, removing the parish priest, isolating the patients, and sending the worst cases to distant hospitals' (Clarke, *loc. cit.*). Here it is the force of suggestion acting on an unstable nervous organism, and securing an influence over the internal organs of the body such as is not possessed, or is possessed only to a very slight degree, by the normal individual. See also art. HYSTERIA.

(ii.) A different complex of symptoms is presented by what is now called *psychasthenia*, or 'obsessional insanity' (Janet), although at some points it is closely related to hysteria. Whereas in the latter the morbid ideas are specific or particular, in obsessional insanity they are general or governing ideas, entering into relation with every possible action or thought of the subject, for example, the idea that one is a criminal, or has committed some unpardonable sin. The idea is involuntarily, continuously, and painfully present to the mind, if not in the centre, at least on the verge, of con-

sciousness, so that to escape from it is impossible. The general ideas most commonly present are those of (a) *crime*, including homicide, suicide, dipsomania, sacrilege, etc., and there are two forms—the obsession of committing the crime, and the obsession of remorse for a crime already committed, the actual crime being in such cases enormously exaggerated in the mind (what was really a mere thought or passing idea being transformed into an actual deed); (b) *physical or mental defect*, again in two forms—obsession of being, and obsession of becoming. Thus, a lady who is distressed at her actual stoutness may refuse food, or take insufficient rest in consequence, while a lady at present of moderate dimensions may adopt the same tactics from fear of becoming unduly stout. Other instances are the fear of approaching old age, of approaching madness, of approaching death.

The common qualities, as regards the content of the obsessional ideas, are: (1) they regard acts or states of the subject himself, not primarily of any external object; (2) the acts or states are socially disreputable, wicked, or ridiculous, or in general undesirable; (3) (and in this is the fundamental difference from hysteria) they are endogenous, self-suggested, whereas in hysteria the morbid idea is usually exogenous, or suggested from without. Accordingly, we find that at the early stages there is full consciousness of the absurdity or folly of the obsession; and also that, except in rare cases, the morbid action is not completely realized. Thus, a kleptomaniac used to take a servant with him when he went shopping, to watch and afterwards return the stolen articles; in another case, a youth, after taking poison, telephoned to his mother to inform her of the fact, with the (expected) result of a doctor's arrival. Again, the hallucinations have not the same definiteness or 'body' as those of hysteria; they lack details, and hence the slightest effort of the attention destroys them, as is the case in dreams; they are seldom completely externalized, or definitely located; they are really symbolic or type-ideas, standing for a system of thought rather than for a definite object.

On the volitional side, there are almost invariably automatisms, that is, actions which occur independently of and even in opposition to the will of the subject. These Janet classifies into three groups, in each of which the disturbance is either systematic or diffuse. (1) Mental agitations, including the systematic forms—manias of interrogation, of doubt, of precision, of explanation; and the diffuse form—the mania of rumination or reverie. The essential character of all is a movement of the mind which is incapable of arresting itself upon any one fact or thought, but is compelled to pass beyond it, to add something to it, and then something more, and something more, without end—'ideas either revolving in a circle, or branching out endlessly, but in any case never reaching an end, a definite conclusion' (*Les Obsessions*, i. 150). Familiar cases are those in which a patient deliberates for hours about carrying out some simple, and, normally, habitual action: e.g. that of putting on a sock, choosing a necktie, stepping over an object in the roadway. (2) On the motor side, what are called 'tics,' that is, automatic actions, twitchings, movements of the lips, etc., these being in nearly all cases symbols or traces of complete actions as suggested by the ideas—'psychic short-cuts.' (3) On the emotional side there are systematic dreads, or 'phobias,' or a generalized anguish or terror. Among the 'phobias' are the fear of crossing an open space (*agoraphobia*), fear of remaining in a shut or closed place (*claustrophobia*), fear of infectious disease (*nosophobia*), fear of insanity, of snakes, of vermin, etc. The diffuse form has sometimes been called *panophobia*.

a generalized expectation or dread of some untoward event happening.

4. Explanation of the symptoms.—The explanation of these phenomena is found first in a weakening of the mind, by which the control over the finer mechanism, alike of association and of voluntary movement, is relaxed and ultimately destroyed. The contrast with the normal individual is the same as that which occurs, within an individual life, between bodily health and sickness or fatigue—in the former case the greater activity, co-ordinative power, effectiveness of movement, ability to recollect at will, and to direct the thoughts; in the latter state the weakening or failure of these powers. Obsessional insanity is an exaggeration of this relatively healthy state, having its centre or point of support in some actual psychical experience of the subject. In hysteria, the general symptoms may most simply be referred to a disaggregation of the personality: some group or groups of memories, or of habits, or of other acquired activities, separate off from the controlling consciousness with which the normal individual identifies his self or ego. Thus, in the automatic writing and other expressive movements of hysteric or neurasthenic patients (Binet, Janet, etc.), the subject is entirely unaware of the actions done, although they would normally imply consciousness both to initiate and to carry out. So, the hypnotized subject may carry out many actions which apparently involve deliberate consciousness, and, on awakening, show complete ignorance of them; and there are familiar cases in which a patient leads, for a shorter or longer period of time, a different life from that of his normal condition, during which he is unconscious, or at least has no memory, of his previous state, while afterwards, on recovery, he has forgotten the temporary abnormal state (Ansel Bourne, etc.). Morton Prince gives a remarkable instance of such a case of double or multiple personality in his *Dissociation of a Personality*. Normally all our experiences, or at least those which are important to us, are synthesized, unified in the single dominant consciousness or personality; abnormally, some bundles of experience, more or less large, are detached from this unifying consciousness, and form secondary personalities, which may make use of the general fund of memories, habits, etc., organized in our experience, and represented in the intimate structure and fabric of the brain. It is not necessary here to discuss how far these self-realizing ideas deserve the name of 'separate consciousnesses' or 'separate personalities.' There are all degrees of disaggregation—between the simple hearing and answering of a question by an absorbed reader, without subsequent awareness on his part of the action, and the extreme form found in Ansel Bourne, Janet's 'Léonie,' or Prince's 'Miss Beauchamp.' There is a close parallelism between such cases and insanity—for example, the insanity of fixed ideas, or of delusions, etc. Freud argues that many of these secondary personalities, as is the case in insanity, represent attempted realizations of certain wishes, desires, ambitions, which the subject has been prevented from successfully carrying out, or which he has voluntarily repressed (*Neurosenlehre*, ed. E. Hitschmann, Leipzig, 1911, p. 54). On the one hand, there is a loss (or a defect), in Janet's view, of tension or *tonus* in the central nervous system, or some part of it, and on the other a 'psychic misery,' a disorganization of the mental life, in which images and ideas tend to realize themselves apart from the control usually exercised by the self on the basis of past experience and according to the claims of the social environment. (On mental dissociation, see also J. Macpherson, *Mental Affections*, London, 1899.)

Corresponding to this disorganization of the mind is the existence of what may be called a floating mass of emotion, dread, or anxiety, ready to attach itself to any idea that may arise, and leading to actions that may be out of all proportion to the motive-idea, taken by itself. This emotion is really the mass of feeling that springs from the altered bodily constitution, and the altered organic and other sensations which form the basis of the 'feeling of self.' Since the alterations consist largely in an increase of bodily and especially of painful sensations, the emotion as a whole is of the depressive type. Such an emotion necessarily alters the whole mental character, and especially the moral character: the subject becomes timid, secretive, cunning, superstitious, selfish, and cruel. In originally higher types there is a tendency to pessimism: the patient is unable to carry out the ideals, frequently extravagant, which he sets before himself; hence doubt and distrust of himself and others; his life is suffused with pain; slight motives cause him distress and anxiety; this 'psychosis' he projects into others, and believes life to be predominantly painful.

Obsessions and fixed ideas are for the most part the result of a logical attempt to account for the emotion of which—although not of its cause—the subject is conscious. In other cases the system of ideas may be derived first from the environment—consciously or unconsciously—and the dread or anxiety is built upon it or attached to it afterwards (see Williams, in *Journ. Abn. Psychol.* v. [1910] 2).

The same features—disaggregation, depressive emotional-tone, or both—may occur in mental degeneration at all its levels. Thus in the *imbecile*, there is failure to co-ordinate experiences, to take more than the first few steps in the synthesis of personality: the result is impulsiveness of character, inability to concentrate the attention, motivation only by the simplest ideas, and these only in isolation from one another, no coherent or sustained activity either of thought or of action. Where depression is also present, the imbecile may become the criminal, with homicidal or other socially dangerous tendencies. In the *paranoiac*, there is failure to form, or the lapse of, the highest mental synthesis—the recognition of the 'social self'—on which the possibility of morality and of religion depends: hence the primary self-consciousness has the field to itself; there is an unrestrained assertion of individual wishes and desires, and a total disregard for the convenience, wishes, or claims of others. The enormous self-esteem easily leads to delusions of unlimited power, wealth, or high rank (*megalomania*), or, where depression is present, to mania of persecution, etc. The nearest parallel that we have in normal life is to be found in dreams (*q.v.*), the analogy of which with insanity has been frequently pointed out (Moreau-de-Tours, Maury, Sir Arthur Mitchell, etc.). The higher systems are out of function, for the time being; the will is at rest; each idea, suggested by present sensory impressions, or by recent experiences, has the field of consciousness to itself: hence it takes on an illusory objectivity, and appears as a *real* experience or perception, while it tends to call up associate ideas which, however, are bound to it only by the lowest, purely mechanical, bonds (habit-associations, associations of sensory similarity). Thus, Maury (*Le Sommeil et les rêves*, Paris, 1865, ch. vi.) describes a dream in which the main incidents were connected together through the words 'Kilomètre,' 'Kilogram,' 'Gilolo,' 'Lobelia,' 'Lopez,' 'Loto.' Simultaneous dissociation of personality is also a common feature of the dream; we appear to be debating with another person, who questions us and answers us; both dis-

putants, however, are ourselves. Maury (*loc. cit.*) mentions that the apparent revelations of dreams may sometimes be traced to forgotten memories of our own, which we recall to ourselves and put in the mouth of another person, in our dream. In general, however, the thoughts of the dream are trivial, absurd, meaningless, as any one may prove for himself by writing down, immediately on waking, the words he has just been uttering in his dream. The same defect, and the same lack of power to criticize what passes through the subject's own mind, we have found to be common in mental degeneracy. The hallucinations of the insane, and the vague emotional depression, dread, or anxiety, have also their analogy in dream-life. All these phenomena of degeneracy appear also in normal life during fatigue, exhaustion, illness, senility, and in the temporary insanity of intoxication by alcohol or other drugs (nicotine, opium, hashish, etc.; see, for example, R. Meunier, *Le Hachich*, Paris, 1909).

5. Progressive mental degeneration.—When degeneration attacks a well-developed mind, the symptoms frequently show a regular sequence, according to Ribot's Law of Regression or Involution (see his *Diseases of the Memory*); the more unstable forms of experience or acquirement are the first to lapse, i.e. (1) the most recently acquired, (2) the most complex, (3) the least frequently repeated, the least habitual or automatic powers. Thus, in senile insanity, or in the beginnings of alcoholic insanity, it is the power to meet new situations, to face difficulties, to create, invent, or discover, that fails earliest: habitual situations are met, adequately perhaps, in habitual ways, but the bloom of individuality is gone. There follows the delicate appreciation of moral values—there is an increase of selfishness, and of obstinacy, along with a failure of higher ambitions; then the more complex intellectual acquisitions, professional skill, scientific interests; then the memory for recent events, the recollection of the less familiar complexes of experience. With the narrowing of intellectual interest, the emotional life occupies a larger space; the patient becomes irritable, and irritating, discontented, malicious, neglectful of the ordinary conventions of life; his thoughts and his speech become less coherent, more vulgar and petty, until, finally, dementia leaves no powers in function except the primitive instincts and reflexes, with at the most a few of the more ingrained habits of mind and body. In a general way also, although by no means in detail, these stages have their parallels in the different concrete forms of degeneracy found in different individuals—from the morally deficient 'intellectual' down to the congenital imbecile or idiot.

DEGRADATION.—See DISCIPLINE.

DEHRĀ.—A town, the capital of Dehrā Dūn, a valley projecting from the Plains of Northern

India like a triangle towards the source of the Jumnā river and the main range of the Himalaya, lat. 30° 19' 59" N.; long. 78° 2' 57" E. From a religious point of view, the place is remarkable as the seat of a strong body of Udāsīs, a Sikh order of Hindu ascetics, who are said to owe their establishment to the son of Gurū Nānak, the founder of Sikhism. Their *gurudwārā*, or temple, the work of their leader Rām Rāy, was erected in A.D. 1699. The central block, in which the bed of the *gurū* is preserved, was built on the model of the Emperor Jahāngīr's tomb at Lahore. At the corners are smaller monuments in honour of the *gurū*'s four wives. The temple is supported by a large endowment, and the *gurū*, who has the revenues at his disposal, is the richest man in the Dūn valley. Formerly the appointment of each new *gurū*, who was selected from among the disciples of the deceased *gurū*, was in the hands of the Sikh chiefs of the Panjāb, who, at each new installation, made a gift to the British Government and received in return the complimentary present of a pair of shawls. This practice is now discontinued. The special dress of the members of the sect is a cap of red cloth shaped like a sugar loaf, worked over with coloured thread, and adorned with a black silk fringe round the edge. The *mahant*, or *gurū*, enjoys high consideration in the country round; and large numbers of devotees, drawn from all classes of Hindus, attend the shrine. But the most enthusiastic worshippers naturally come from the Cis-Sutlej Sikh States. The annual ceremonies, which last ten days, are performed at the Hindu feast of the Holi in spring.

LITERATURE.—Atkinson, *Himalayan Gazetteer*, III. (1886) 1971. W. CROOKE.

DEICIDE.—This term, though not new, has been used in the past with such restricted meaning, and so seldom, that there is an imperative need to enlarge its definition before it can be of service in that branch of scientific research in which it is increasingly used. The following definition, taken from Ogilvie's *Imperial Dict. of the Eng. Lang.*, will show this:

'*Deicide*=(1) The act of putting to death Jesus Christ our Saviour. "Earth, profaned, yet blessed with *deicide*" (Prior). (2) One concerned in putting Christ to death (Craig). (Rare in both senses.)'

Another quite recent dictionary defines the word thus: 'The killing of God; especially the crucifixion of Christ.' Though there is here a definition more in accord with modern requirements, the student of religions, acquainted with facts which seem to show that there has been a wide-spread custom of putting to death both men and animals thought to be gods incarnate, must set aside everything that so narrows the word as to make it unfit for his purpose. Doing this, one is left with what is, after all, a mere translation of the Latin term, viz. 'the killing of a god,' or, more briefly, 'god-slaughter.' It is in this largest sense that the word is to be here used. For obvious reasons, there will be few, if any, references to what was at one time looked upon as the sole instance of *deicide*—the Crucifixion.

None of the phenomena which the scientific study of religions has made known has aroused more interest than those obscure rites and ceremonies, those strange customs, which seem best explained by the theory that *deicide*, once supposed to find its only example in the Crucifixion, has been, in fact, a wide-spread custom, which has left a deep impress on the religious thought of the race. Before giving the few instances of this custom which space limits allow, it will be well to make some kind of classification, which will enable the student to understand more fully their nature and extent. It is suggested that instances of god-slaughter may be placed in one or other of two

main classes, as being (1) *real*, (2) *mimetic* or *symbolic*. A noticeable variety of the former is, on one theory at least, traceable in certain solemn expiatory sacrifices, and may therefore be termed 'expiatory' or 'piacular.' Again, in many of these instances for which the name 'mimetic' or 'symbolic' has been suggested, the effort 'to keep in remembrance' seems so prominent that they may well be termed 'commemorative.' The following is therefore suggested as a working classification for those instances of god-slaughter which seem to have been enacted.

1. *Real* (with sub-class 'piacular' or 'expiatory').—Cases of real god-slaughter may be seen in the strange custom, at one time wide-spread though now well-nigh extinct, of putting to death kings and chieftains at set times, or when they showed some sign of approaching decay and death. There is evidence to show that originally these high-placed victims were looked upon as Divine in a very real sense—gods incarnate. Such Divine honours are still ascribed by savage people to their king or ruler. The existence of these Divine beings in full vigour was deemed necessary to the welfare of all their people. It was a proof that their god could still safeguard their interests. The reason for putting these gods incarnate to death is believed to have been the dread lest, through disease or decay of strength, they might be unable any longer to help and keep in safety those who looked to them for these blessings. It was necessary, therefore, that a fresh and more vigorous incarnation should be sought for, to take the place of that which was ready to vanish away.

Africa and India furnish the best attested instances of such deicide, though traces of it are supposed to have been discovered in the accounts of old-world rites handed down by classical writers. Three centuries ago it was the practice to put to death the king of Sofala, an African State, when even a slight bodily blemish became manifest; whilst the king of Eyo, also in Africa, was expected to commit suicide should his headmen think it demanded by the needs of the State. Again, in one of the kingdoms of Southern India the king was put to death or compelled to self-immolation, after a reign of twelve years. Similar customs seem to have obtained in others of the Indian States. It is not surprising to find that, in course of time, means of evading this disagreeable necessity were discovered; one method, that of providing a substitute, human or animal, having a special interest as being the possible beginning of vicarious sacrifice.

An interesting variety of these customs may be seen in cases where an original totem has developed into a deity worshipped by the members of the totem clan. It has been observed that at certain times, when the deity seems to be estranged from his worshippers, or for some other reason the clan-bond needs renewing or cementing, recourse has been had to sacrifices of special solemnity and efficacy. In these the victim has been an animal of the same species as the original totem. In other words, the very deity constitutes the sacrifice which is to heal the breach between himself and his worshippers. It is not difficult to see in these solemn renewals of covenants the beginning of expiatory or piacular sacrifice. There seems to be a sufficient reason for thinking them to be cases of piacular deicide. On the other hand, the solemn putting to death, by his own priests, of the divine Apis bull of Egypt, after the lapse of a certain number of years, seems rather to be an instance of the endeavour to secure a renewal of the Divine life in an incarnation of unbroken vigour.

2. *Mimetic* or *symbolic* (with sub-class 'commemorative').—This has its roots in those myths

which constitute so large a part of the quasi-theology of the great ancient Nature-religions. In these myths the phenomena of Nature are personified and deified, and her processes become incidents in the lives of the gods thus originated. The myths which most readily furnish illustrations of the matter now in hand are those connected with the changes of the season which are so closely related to the growth of vegetation, the quickening of the seed, and the maturing of the kindly fruits of the earth. Such are the myths of Adonis, the Syrian deity, slain by the hunted boar on Mount Lebanon, so that his blood reddened the waters of the river which carried it down to the sea; of Osiris, slain by the malice of his brother Set or Typhon; of Dionysus, god of the vine, who, according to the Greek myth, was put to death by jealous Juno. Many quaint superstitions and ceremonies still surviving, among the peasantry of Europe as well as among the farmers and cultivators of well-nigh all other lands, find their best explanation in the wide-spread belief in similar stories. In them, and in the rituals based upon them, were set forth the death by violence and, in some cases, the subsequent resurrection of a god—a god of vegetation, and especially of corn.

J. G. Frazer writes thus of the Adonis rite: 'His death was annually lamented with a bitter wailing, chiefly by women; images of him, dressed to resemble corpses, were carried out as to burial and then thrown into the sea or into springs; and in some places his revival was celebrated on the following day' (*GB*² ii. 116).

Concerning the Egyptian deity Osiris he says: 'Of the annual rites with which his death and burial were celebrated in the month Athyr we unfortunately know very little. The mourning lasted five days, from the eighth to the twelfth of the month Athyr. The ceremonies began with the "earth-ploughing," that is, with the opening of the field labours, when the waters of the Nile are sinking. The other rites included the search for the mangled body of Osiris, the rejoicings at its discovery, and its solemn burial. The burial took place on the 11th of November, and was accompanied by the recitation of laments from the liturgical books' (*ib.* 140).

Again, of Dionysus he writes: 'The Cretans celebrated a biennial festival at which the sufferings and death of Dionysus were represented in every detail' (*ib.* 163).

Other evidence obtainable warrants the belief that mimetic or symbolic deicide occupied no small place in the ritual of long-vanished religions. Such god-slaughter was not a mere amusement, or even a gratification of the dramatic instinct so deeply implanted in human nature. It had a far more serious purpose. Most probably these annual rites were performed in the firm conviction that they would further and assist those great and all-important natural processes on which the very life of the world depended. No doubt, in course of time, many of these customs, at least before they became mere superstitions, would be retained as a means of keeping in remembrance that which ought not to be forgotten. In other words, they would be more distinctly 'commemorative.' Such seems to have been the case with some very striking ceremonies observed by the ancient Mexicans, in which it was the custom to make paste or dough images of certain of their gods. These images were then 'killed' and broken in pieces to furnish material for a sacrificial meal. It is a curious circumstance that portions of this consecrated food were reserved for the sick, and carried to them 'with great reverence and veneration.'

Concerning such customs as these, many questions arise which it is not easy as yet to answer. Even the conclusions already arrived at are by no means so established as to be accepted without reserve. The evidence, after all, is so scanty and elusive that one is compelled to a resolute distrust of one's own judgment, and to reliance rather on the sagacity of those skilled in such investigations, reserving to oneself the right of giving a casting vote in cases where the evidence for and against a certain view seems evenly balanced. Yet, not-

withstanding all this, no part of the great study of religions is fuller of suggestion than this, more especially in the strange parallels noticeable between pagan and Christian thought and ritual. It is only necessary to name such themes as 'Incarnation,' 'Crucifixion,' 'Sacrifice,' 'Eucharist,' etc., to show this. What influence the recognition of such analogies may have, in the future, on Christian speculation it is impossible to say.

T. STENNER MACEY.

DEIFICATION (Greek and Roman).—I. The Greeks.—The deification of actual men and women among the Greeks is a natural development of that view of the gods which their early literary documents show already prevalent. The Greek was not satisfied to leave the superhuman beings whose presence he divined in the operations of Nature, and whose legends he learnt as a child, in a mystical haze, as vast powers of shadowy and uncertain outlines; his mind loved the light of day; he early wanted to know exactly what these beings looked like, what definite things they had done, in what relations of kinship they stood to each other and himself. Hence it was that the gods of the Greek came to be anthropomorphic in a peculiar sense. He conceived them as really like men; they had actually trodden the hills and fields familiar to himself: the Athenian could look at the very mark which the trident of Poseidon had left upon the rocks of the Acropolis; the Spartan knew from a child the grave of Hyacinthus, whom Apollo had slain with the discus.

'From one origin are begotten gods and mortal men,' says a line attributed to Hesiod (*Works and Days*, 103), and Pindar echoes it in the opening of *Nem.* vi.: 'There is one self-same race of men and gods; and from one single Mother have we both the breath of life; only faculties altogether diverse distinguish us; since man is a thing of nought, and those have brazen heaven for a sure abiding home. And yet we have some likeness, either by greatness of soul or by fashion of body, to the Deathless Ones.'

Yet more, the gods had begotten human children in intercourse with men; the families of the legendary chieftains, and such families of a later day as could make out a descent from the heroes of legend, were literally and physically their issue. The ancient heroes, as Homer tells us by a number of recurring epithets, were very much like gods to look at. And not only could the Divine thus come to earth, but the legends knew of men becoming gods (*Eur. Andr.* 1255, etc.).

Especially is the boundary-line between the worship of the dead and that of the gods hard to draw, for the rites offered generally to the dead implied the belief that the deceased had some power of action in the living world; only the scope of such power was greater in the case of those worshipped as heroes, whilst the distinction, again, between the rites proper to heroes and to gods respectively tended in practice to become blurred (*Deneken*, col. 2526, note). A difference was, indeed, recognized in common parlance between the ordinary attention to the dead, 'heroic' honours, and divine honours (see *Arr.* iv. 11. 3); but, when we try to draw a hard-and-fast line, the difference appears rather one of degree.

The mass of the heroes worshipped by the Greeks were mythical figures imagined in a remote past, especially the legendary founders of cities, the eponymous ancestors of clans, or the patrons of particular professions. How some cases occurred in which actual men were assimilated after their death to these heroes of the fabulous past we cannot say, but it seems to have happened early in certain parts of the Greek world (esp. Thrace and Sicily) that the founders of new cities received the same honours which the older cities gave to their legendary heroes (*Timesius* in the 7th cent. B.C. [*Hdt.* i. 165]; *Miltiades* in the 6th cent. [*Hdt.* vi. 33]; *Gelon*, *Theron*, and *Hiero* in the 5th cent. [*Diod.* xi. 33, 53, 60]; *Hagnon* and *Brasidas* in the same century [*Thuc.* v. 11]); or that the spirits of those

who had been violently slain under circumstances which made some community dread their vengeance were placated with 'heroic' honours (*Philip of Croton* in the 6th cent. [*Hdt.* v. 47]; *Onesilus*, king of Salamis, in the 5th cent. [*Hdt.* v. 114]).

It was thus natural that, when the emotions of reverence or gratitude entertained with regard to some actual man were raised to a high degree, they should be felt as almost identical with those which had the gods for their object (*ἴσον γὰρ σε θεῶν τίσουσιν Ἀχαιοί* [*Hom. Il.* ix. 603]; *θεὸς δ' ὡς τέλει δῆμῳ* [*id.* v. 78, etc.]). In a moment of exaltation it might even seem proper to express such feelings in the same ritual performances as those used for the gods. 'Ὁ παῖδες, Ἀργελοῖσιν εὐχασθαι χρεὼν, θύειν τε λείβειν θ' ὡς θεοῖς Ὀλυμπίοις σπονδάς,' exclaims the Danaus of *Æschylus* (*Supp.* 980 ff.). Such language was, of course, a rhetorical exaggeration; but, when the notion, even as an extravagance, was present to the mind, it was a short step, in days when the old awe of the gods had declined and novel dramatic expression was craved for, to translate it into action. According to *Duris*, the first instance of the formalities of religious worship being addressed to a living man was when *Lysander*, at the end of the 5th cent., became the object of a cult in Samos; altars, sacrifices, pæans, and games are specified as its constituents (*Plut. Lys.* 18). The case did not remain isolated. In *Thasos*, soon after, it was taken for granted that the State might confer divine honours on whom it pleased; but the fact that this new development was reprobated in quarters where old-fashioned piety still existed is shown by the answer of *Agesilaus* when the *Thasians* informed him that they were building him temples (*Plut. Apophth. Lac. Ages.* 25). When *Dion* entered *Syracuse* in 357, he was received as a god, with sacrifices, libations, and prayers (*Plut. Dion.* 29). *Clarchus*, the tyrant of *Heraclea*, adopted the insignia of the Olympian gods, and compelled his subjects to approach him with prostrations (*Suid.* s.v. *Κλέαρχος*).

To understand the state of mind which led to such practices, we must remember the movement of Greek thought which had taken place since the days of *Æschylus*. The religious scepticism which was abroad had, no doubt, for many minds emptied the traditional forms of worship of their content of awe and devotion, and in proportion as they had become mere formalities there was less restraint from offering them to men. So far as the old gods remained as figures for the imagination, anthropomorphism had gone a step further, as may be seen in the contrast of *Praxiteles* with *Phidias*. Scepticism had in fact brought anthropomorphism to its ultimate conclusion by asserting roundly that the gods were men, as was done by the popular *Euhemerism*. The gods, according to this theory, were kings and great men of old, who had come to be worshipped after their death in gratitude for the benefits they had conferred (see *EUEMERISM*). On this view, there was nothing monstrous in using the same forms to express gratitude to a living benefactor. In so far as the worship of living men arose from these conditions, it was a product, not of superstition, but of rationalism. It shows, not how exalted an idea was held of the object of worship, but how depreciated in meaning the forms of worship had become. If this is so, *Frazer* (*Early Hist. of Kingship*, 1905, p. 137) errs in confusing it with primitive superstition, of which it is really the antithesis. At the same time, the development of religious feeling, which revolted against the traditional anthropomorphism, was not altogether unfavourable to such cults. The tendency to merge the separate divinities in the conception of One pervading Divine power (*Schmidt, Ethik d. alt. Griechen*, 1882, i. 52) would make it easier to see manifestations of this power in human personalities which asserted themselves

strongly. A special kind of deification was that which we find in connexion with the mystic sects dispersed through the Greek communities and the philosophies which borrowed from them. If deathlessness had been all along the distinguishing characteristic of the gods, those who laid stress upon the deathlessness of the individual soul thereby came near to making it divine. And so we get the idea that the human soul is a divine being imprisoned for some pre-natal offence in the mortal body. The notion, current among the Orphics, passed from them to the Pythagoreans (Rohde, *Psyche*⁴, ii. 121 f., 161 f.). So, too, Empedocles declared that, if a divine being sinned, he was incarnate for punishment till he had worked out his salvation in a number of successive lives, and was restored to fellowship with the gods (frag. 146, 147 [Diels]). Empedocles himself was already reaching that consummation, and claimed divine honours: ἐγὼ δ' ὑμῖν θεὸς ἀμβροτος, οὐκέτι θνητός, | πωλεῖσθαι μετὰ πᾶσι τετιμένους, ὥσπερ τοῖκα, | ταῖνλαῖς τε περιστέπτοισι στέφουσιν τε θαλάσσης (frag. 112 [Diels]; cf. Rohde, *Psyche*⁴, ii. 171 f.). So, again, on the funeral tablets discovered at Thurii, the dead man declares to the gods that he is of their kindred, and is saluted as one who has passed from mortality to deity: 'Ὀλβιε καὶ μακαριστὲ, θεὸς δ' ἔσθι ἀντὶ βροτοῖο. θεὸς ἐγένου ἐξ ἀνθρώπου (Michel, *Recueil*, 1896-1900, nos. 1330, 1331; Harrison, *Prolegomena to Gr. Relig.*², 1908, p. 660 ff.).

If any one had the right to divine honours, Alexander, after feats of conquest to which Greek story knew no parallel except the mythological triumphs of Dionysus and Herakles, obviously had a pre-eminent claim. Already his father, Philip, had in his own kingdom caused his own statue to be carried in procession, together with those of the twelve gods (Diod. xvi. 92. 5). It is absurd to call in the influence of 'the East' to account for what followed so inevitably from the prevalent disposition of the Greek world. As a matter of fact, the Achæmenian kings were apparently not worshipped as gods (*Æsch. Pers.* 157 is cited by Beurlier and others to prove that they were, but the evidence of the native monuments is against it, and the Greek notion represented by *Æschylus* seems to rest upon a misapprehension of the formality of prostration). In Egypt, indeed, since the New Empire, the reigning king had been so worshipped, and it was natural that Alexander should here be saluted as the son of Amen (Ammon). But we may safely say that, even without this, the Greeks would have worshipped him. The oracle of Didyma had already in 331 (unless Strabo is right in his scepticism) declared Alexander to have been begotten by Zeus (Strabo, xvii. 814). In 323, on Alexander's return from India, embassies arrived at Babylon from Greece, wearing and bringing crowns such as indicated that they were *θεωποῖ*, approaching a god (Arr. vii. 23. 2). There was still, indeed, in Greece a party of old-fashioned piety who opposed the extravagant flattery as profane. The question provoked stormy debates in the Athenian assembly. The divine honours were defended on the other side with flippant sarcasm as a form too empty to matter. 'By all means,' exclaimed Demosthenes, 'let Alexander, if he wish it, be the son of Zeus and Poseidon both together' (Hyper. [Blass] i. 31. 17; cf. ps.-Plut. *Vit. X. Orat.* vii. 22; Valer. Max. vii. 2, 13; Dinarch. in *Demosth.* i. 94). The expression shows that Alexander was understood himself to demand such honours. According to an account preserved by Arrian, it was the philosopher Anaxarchus who was employed to propose divine honours to Alexander in the circle which surrounded the king's person. The prostration which Alexander demanded was regarded by the Greeks as an acknowledgment of deity, and Anaxarchus is represented as defending Alexander's deity on purely rational-

istic euhemeristic grounds (Arr. iv. 10). For Hephæstion, at any rate, Alexander demanded worship after his favourite's death. The worship was 'heroic' in kind; Arrian gives under reserve the story that Alexander had wished to make it properly divine, but had been forbidden by the oracle of Ammon (Arr. vii. 14. 7; but cf. Diod. xvii. 115).

If worship offered to the living Alexander had offended the more conservative Greek feeling, worship offered to the dead Alexander as a hero was in accordance with Greek tradition. The forms of worship chosen would show numberless local variations which we cannot now trace. The Ionian Confederacy maintained a cult of Alexander centred in a sanctuary near Teos (Strabo, xiv. 644) till the days of the Roman Empire. Under the Roman Empire itself the cult of Alexander flourished (Lamprid. *Alex. Sev.* 5. 1; Herodian, iv. 8; Dio Cass. lxxvii. 7).

Naturally, the Macedonian chiefs who entered upon Alexander's inheritance saw their interest in publicly recognizing his divinity. In what forms they severally did so is not recorded. Eumenes had a 'tent of Alexander' in his camp, with a throne before which the officers offered a sacrifice as to a present god (Diod. xviii. 60, 61; Plut. *Eum.* 13; Polyæn. iv. 8. 2). The appearance of Alexander's head, with the horns of Ammon, upon the royal coinages is an assertion of his assimilation to the gods.

Antipater was an exception; in him the old feeling which condemned these practices as impious (*ἀσεβής* [Suidas]) still found a representative. The official worship of Alexander at Alexandria as god of the city cannot be traced further back than Ptolemy II., who transferred the conqueror's body from Memphis to the new temple called the *Sēma* in Alexandria. [It is curious that Diod. speaks of the honours offered to Alexander in Alexandria as *ἡρωϊκά* (xviii. 28. 4). Probably the expression is used loosely, because the honours were offered to a dead man.] Henceforward the annual priest of Alexander, chosen from a limited number of privileged families, was eponym for the year till Roman times. A golden crown and a crimson robe were his insignia. The cult continued in Alexandria till the institution of Christianity (Otto, *Priester und Tempel in hellenist. Aegypten*, i. 138 f., 253).

The Greeks, who had worshipped Alexander in his lifetime, were ready enough to give the same sort of worship to his successors. Craterus, who died in 321, was honoured at Delphi with a *pæan* (Athen. xv. 696e). Scepsis in 310 voted the living Antigonos a *τέμενος*, altar, and image; they had already some time previously instituted sacrifice, games, and *stephanephoria* in his honour (Dittenberger, *Inscr. Orient.* i. 6). In 307 Athens exhausted all forms of adoration in regard to the same two princes. They were addressed as *θεοὶ σωτῆρες*; a regular priesthood was established for them; and changes, ostensibly permanent, were made in the calendar and religious organization of the people. In 290, a hymn, which has been preserved, was composed for the reception of Demetrius. In it Demetrius is hailed as the son of Poseidon and Aphrodite; he and Demeter are the 'greatest and friendliest of the gods,' and so on (Diod. xx. 46; Plut. *Dem.* 10 f.; Athen. vi. 253, xv. 697a). It is important to observe that the really religious people still protested against these perversions, and saw in the failure of the vintage a judgment of the true gods (Philippides, *ap.* Plut. *Dem.* 12). The first Greek State to offer divine honours to Ptolemy was apparently the Confederation of the Cyclades (*τετιμηκόσιμῳ πρῶ[τοις τ]ῶν σωτῆρα Πτολεμαίων ἱσοθέοις τιμαῖς* [Ditt. *Syll.*² i. 202]); Rhodes in 304, or soon after, conferred upon him the divine surname of

'Saviour,' and dedicated to him a *τέμενος* and festival (Diod. xx. 100. 3 f.; Paus. i. 8. 6; cf. *Πτολεμαίου τοῦ Σωτήρος καὶ θεοῦ* [Ditt. *Inscr. Orient.* i. 16]); and Lysimachus was worshipped with altar and sacrifice at Priene (*Inscr. of the Brit. Mus.* cccci.) and in Samothrace (Ditt. *Syll.*² i. 190). Seleucus, after his conquest of Asia Minor (281), had an altar built to him by Ilion, and games were instituted to him like those held in honour of Apollo (Hirschfeld in *Archäol. Zeitschr.* xxxii. [1875] 155; Haussoullier in *Rev. de Philol.* xxiv. [1900] 319). Both Seleucus and his son Antiochus were worshipped by the Athenian colonists in Lemnos (Phylarch. *ap. Athen.* vi. 254). Especially where a chief had founded or re-founded a city, he had the founder's prerogative of worship: so Cassander at Cassandrea (Ditt. *Syll.*² i. 178), Demetrius at Sicyon (Diod. xx. 102 f.), and Ptolemy at Ptolemais (Otto, *Priester u. Tempel*, i. 160).

It is probable that all through the epoch when the dynasties of Seleucus and Ptolemy ruled in Asia and Egypt respectively, the Greek cities which were subject to them, and some which were merely allied, expressed their loyalty in a cult. Our evidence is, of course, fragmentary.

We find at Ilion a priest of Antiochus I. soon after his accession (Ditt. *Inscr. Orient.* i. 219); and cults of the same king celebrated by Barygia after his death, and by the Ionian Confederacy during his lifetime (*τέμενος*, altar, image, sacrifice, games, *stephanephoria* [Michel, 486]). At Erythrae, games called *Σελυκεία* are mentioned, and *Σωτήρια* at Mylasa (Michel, 252, 602). At Didyma, Antiochus I. and his wife Stratonike seem to have been worshipped after their death as *θεοὶ σωτήρες* (CIG 2852; cf. Haussoullier, *Hist. de Milet*, 1902, p. 51). Smyrna instituted a special worship of Stratonike as Aphrodite Stratonikis, in which her son Antiochus II. was associated with her (Ditt. *Inscr. Orient.* i. 229; Tac. *Ann.* iii. 63). Similarly, in the case of the Ptolemies, we find *Πτολεμαίεια* celebrated at Athens, where Ptolemy I. was chosen as the eponymous hero of a tribe (Paus. i. 5. 5; *CIA* ii. 444. 32, etc.), in Lesbos (Ditt. *Inscr. Orient.* i. 380), and by the Confederation of the Cyclades (Delamatre, *Rev. de Philol.* xx. [1896] 103 f.). Halicarnassus dedicated a stoa to Apollo and king Ptolemy (Ditt. *Inscr. Orient.* i. 46). The Antigoniid dynasty which inherited Macedonia was honoured by *Ἀντιγονεία*, which are found at Delos (*BOH* vi. 143), in Euboea (*ib.* x. 102 f.), and, after 223, among the Achæans (Plut. *Arat.* 45, etc.; cf. Niese, ii. 338). Attalus of Pergamum became in 200 B.C. the eponym of an Athenian tribe, and his wife Apollonis the eponym of a deme; a special priest was attached to his service (Polyb. xvi. 25; *CIA* ii. 1670, 465, 469). Sicyon in 193-7 instituted a festival in honour of Attalus I. (Polyb. xviii. 16); Cos a *ποιμνία* to Eumenes II. (Ditt. *Syll.*² ii. 619). As a matter of course, the cities actually subject to the Attalids maintained some such worship (Cyzicus [temple of Apollonis], *Anth. Pal.*, bk. iii.; Sestos [priest, birthday festival], Ditt. *Inscr. Or.* 339; Elaea [Attalos σύνναος with Asklepios, priest, daily sacrifice], Ditt. *Inscr. Or.* 332; Ilion [tribe Ἀττάλεις], CIG 8616; Sardis [Eumeneia], Ditt. *Inscr. Or.* 305; Ionian Confederation, *Arch. Anzeig.*, 1904, p. 9; Nacrasa [Βασίλεια], Ditt. *Inscr. Or.* 268; Eumenia [φιλᾶδελφεία], coins; Aphrodisias [Ἀττάλεια], coins; Teos [priest of Eumenes and deceased Apollonis, priestess of Stratonike and Apollonis, temple of Apollonis Ἀποβαρπία], Ditt. *Inscr. Or.* 309; Hierapolis [deification of Apollonis], Ditt. *Inscr. Or.* 803; Magnesia-on-Meander [tribe Ἀττάλεις], Ditt. *Syll.*² ii. 553; and Ægina [Ἀττάλεια, Εὐμηνεία], Ditt. *Inscr. Or.* 329).

All these cults are instituted by cities, ostensibly by their own act, as separate communities; the cult of one city differs in its forms from that of another. They are to be distinguished therefore from cults instituted by the kings themselves for the realm. The first cult of the latter sort we know of is that instituted for the first Ptolemy, as *θεὸς σωτήρ*, after his death (282-3), by his son Ptolemy II. (Ditt. *Syll.*² i. 202). With his father Ptolemy II. associated his mother Berenice on her death (soon after 279), the two being worshipped together as *θεοὶ σωτήρες*. 'First of all men, dead or living,' says Theocritus, 'this man established temples fragrant with incense to his mother and his sire' (xvii. 121). When the sister-wife of Ptolemy II., Arsinoë Philadelphus, died in 270-1, she too was deified. And now a further step was taken. Ptolemy II. had himself put on a level with his sister; the living king and the dead queen were worshipped together as *θεοὶ ἀδελφοί*. This cult was combined with that of Alexander, a single priest

serving the group of divinities; the cult of the *θεοὶ σωτήρες* remained for the time distinct. When Ptolemy II. was succeeded by Ptolemy III. Euergetes, the *θεοὶ εὐεργέται* (i.e. Euergetes and his wife Berenice II.) were added to Alexander and the *θεοὶ ἀδελφοί*, and so on with the other kings till the end of the Ptolemaic dynasty. Under Ptolemy IV. Philopator (between 220 and 215) the cult of the *θεοὶ σωτήρες* ceased to be distinct; their name now appears in the official registers after that of Alexander. The seat of this official cult seems to have been the *Σῆμα* of Alexander, to which a *Πτολεμαίειον* (a mausoleum of the Ptolemies) was joined (Otto, *Priester und Tempel*, i. 139). Some of the Ptolemaic queens had priestesses of their own—Arsinoë Philadelphus a *καρτηφόρος*, Berenice II. an *ἀθλοφόρος*, Arsinoë, sister-wife of Ptolemy IV., a *λέπεια*, and Cleopatra III. (daughter of Ptolemy Philometor, wife of Ptolemy Euergetes II.) a variety of ministers, a *στεφανηφόρος*, a *πυροφόρος*, a *λέπεια*, and a male priest styled *λεπὸς πᾶλος* (Otto, p. 158, cf. p. 411). The priestesses of the queens may have performed their rites at separate shrines in Alexandria. Distinct, of course, from this system of Greek worship was the worship given by the Egyptians, on the lines of their national tradition, to their foreign kings and queens; though the influence of the Egyptian forms of worship upon the Greek may be seen, e.g. in the king himself becoming, on occasion, priest of his own deity in Alexandria (Otto, p. 182, note 6). Cyprus, a Ptolemaic dependency, had a high priest (*ἀρχιερεὺς τῆς νήσου* or *τῶν κατὰ τὴν νήσον λεπῶν*) of its own, in whom we may see the president of the provincial cult of the kings (Strack, *Dynastie der Ptolemäer*, no. 76, etc.).

In the Seleucid realm, when Seleucus was murdered in 281, his son Antiochus I. was forward to do as much for his father as Ptolemy II. had just done for his. The tomb of the old king at Seleucia was constituted a temple, a *Νικατόρειον*, and a cult was officially instituted for him as a god (App. *Syr.* 63). With him each of the following kings was in his turn associated; one priest served the founder and his deified successors, and one the reigning king (Ditt. *Inscr. Orient.* 245). How soon it came about in the Seleucid realm that the living sovereign was the object of worship instituted by the court we do not know. The important inscription which gives us a rescript of Antiochus II. (261-246 B.C.) (Ditt. *Inscr. Orient.* 224) shows us such already existing. It is a worship of the king organized by provinces, each province having a high priest. The rescript is issued in order to associate the queen Laodike in the cult, instituting provincial high priests for her, side by side with those of the king. Incidental mention of provincial high priests in later reigns shows us the system still in continuance (Michel, 1229), and they present an obvious parallel to the high priests of Cyprus in the Ptolemaic realm.

Although a difference is rightly insisted upon between the cults instituted by the central government and those offered by the Greek communities as independent agents, the dividing line between the two is not easy to draw. This is due to the ambiguous position of the Hellenistic kings, who wished, while retaining Greek cities under their control, to leave them the semblance of autonomy. Cults offered ostensibly by a city spontaneously might be framed at a suggestion from the court which it was impossible to disobey. In what class, for instance, are we to put the cults offered to the Ptolemaic kings at Ptolemais, to the Seleucid kings at Seleucia, to the Attalids at Pergamum? All these cities had the forms of municipal autonomy, but were entirely subject to royal dictation. The nucleus of the cult at

Ptolemais is that of the founder Ptolemy I. Soter, and to him the later kings (at any rate after the *θεοὶ φιλοπάτορες*) become attached. The cult of Seleucia founded under Antiochus I. we have already mentioned. At Pergamum a sheep was sacrificed by the civic authorities to Eumenes I., that is to say, even before the rulers of Pergamum had acquired the title of kings (Ditt. *Inscr. Orient.* 267). An inscription of the time of the last king of Pergamum, Attalus III., shows us sacrifices offered to the founder Attalus II., his brother Philæterus, and the reigning king (*Mitt. Ath.*, 1904, p. 152).

In connexion with the assumption of deity by the kings themselves, we must reckon the appearance of their effigy on coinages struck by royal authority. The official surnames, again, which they bear have been thought to have religious significance. This is difficult to prove, because the king would naturally be addressed in worship by his full titles, and if, therefore, we find the surname used in the cult, it would not necessarily show a religious origin. In favour of the hypothesis are: (1) the fact that some of the surnames, e.g. *σωτήρ*, *ἐπιφανής*, have undoubted religious associations; and (2) the practice of the Greeks of attaching surnames to the names of deities—Athenē Promachos, Zeus Melichios, etc.; cf. also the title of *εὐεργέτης* conferred on Diogenes (see below).

The title of *θεός* does not seem usually to have been assumed by kings during their lifetime. For the Greeks of Egypt, as we have seen, their living king was a god from the time when Ptolemy II. associated himself with his dead and deified sister. But, whilst the living king and queen were, after Ptolemy II., regularly worshipped together as *θεοὶ εὐεργέται*, *θεοὶ φιλοπάτορες*, etc., the kings do not seem to have had themselves called *θεός* in the protocol of State documents till the time of Euergetes II. (Strack, *Dynastie der Ptolemäer*, p. 120). In the Seleucid dynasty also it is to be noted that Antiochus IV. Epiphanes is the first king under whom *θεός* is attached to the royal name upon the coinage, and Antiochus is exactly the king who seems to have put his deity prominently forward (cf. Bevan, *House of Seleucus*, 1902, ii. 154). The usage of the Pergamene kingdom appears also to have confined the title of *θεός* to deceased sovereigns. A king or queen at death seems to have been officially declared to have joined the number of the gods (Cardinali, 'Regno di Pergamo,' p. 153, note 4). This did not exclude the offering of rites of sacrifice, etc., to the living sovereign. Whether, in the case of acts which were understood to be ceremonial flattery, any attempt was made to reconcile the inconsistency of worshipping some one whose apotheosis was still future we do not know.

It remains to consider the relations to the older gods in which these cults in theory placed the men worshipped. These were of three kinds.

(1) *Descent*.—Those Greek families which professed to trace back their family tree to heroic times had, of course, no difficulty in making out their descent from some god. It can hardly, therefore, have been the peculiar prerogative of the royal dynasties in Hellenistic times to possess this sort of link with divinity. They seem, nevertheless, to have thought it worth while to emphasize the divine origin of their families. So we find that the family of Ptolemy at the Egyptian court was traced back to Herakles and Dionysos, the latter deity after the reign of Philopator being given prominence over the former. Possibly the family of the Seleucids claimed descent in the same way from Apollo. The Attalids, like the Ptolemies, apparently took Herakles and Dionysos

for the founders of their race (Cardinali, *op. cit.* 147).

(2) *Immediate sonship*.—Dignity of family was not enough. If possible, the person worshipped had to be himself the offspring of a god. Already, in the times before Alexander, this was asserted at the Syracusan court of Dionysius (Plut. *de Alex. virt.* ii. 5). Alexander claimed that his mother had conceived him of Zeus Ammon. The real father of Seleucus, it was asserted at the Seleucid court, was Apollo (Just. xv. 4). Apollo was ἀρχηγός τοῦ γένους (*CIG* 3595).¹ So, too, we saw that the Athenians in 308 hailed Demetrius as the son of Poseidon and Aphrodite.

(3) *Identification*.—For this, again, we have a precedent before Alexander in Clearchus of Heraclea (*FHG* iii. 526). The first instance we can trace after Alexander is that of Seleucus, who was worshipped at Seleucia as Zeus Nicator. His son at the same place was Antiochus Apollo Soter (Ditt. *Inscr. Or.* i. 245). In Egypt, Arsinoë at her apotheosis was identified with Aphrodite (Strabo, xvii. 800; Athen. vii. 318d, xi. 497d), and so was Stratonike I. at Smyrna. Antiochus Epiphanes probably identified himself with Zeus (*JHS* xx. [1900] 26 ff.). The surname *νέος Διόνυσος* was borne by Antiochus VI. (145–143 B.C.) and Antiochus XII. (86–85 B.C.) in Syria; and by Ptolemy Auletes (81–52 B.C.) in Egypt. Cleopatra VII. was styled *νέα Ἴσις* (Strack), and the last Cleopatra also bore the same title, and appeared in public arrayed as the goddess (Plut. *Ant.* 54).

The Greeks had no idea of any divinity in kingship *per se*. The proffer of divine honours in the 4th cent. B.C. was the recognition simply of a personality mighty to impress and modify the world. The Greeks, as a matter of fact, who approached Alexander with worship did not regard him as *their* king (he was king of the Macedonians and Persians). Naturally the Macedonian chiefs who made themselves kings after Alexander attained thereby a position which gave them pre-eminent power upon the world, and the proffer of divine honours expressed a desire to secure their good-will and protection. We have here further evidence that it is a mistaken track to assimilate the Greek worship of kings with a worship of the king as such, like that which had existed recently in Egypt and, centuries before, in Babylonia. Naturally, too, when the new kingdoms had developed settled institutions, the courts found in the cult of the sovereigns a useful means of imposing upon the popular imagination and securing an expression of loyalty. And, as Kaerst has pointed out, it was not easy to find a formal expression for dominion over a number of Greek States which were, by Greek political theory, independent sovereign communities. Over the authorities of the city had been, in olden days, only the gods, and the assumption of deity gave a sort of legality to the relation of the king with the subject Greek States. Antiochus IV. turned his deity to further account by representing himself as the divine husband of the goddess of a rich temple like that of Hierapolis, and claiming the temple treasure in that capacity (Gran. Licin. 28).

The Greek practice passed to the new dynasties which arose in the East. The Greek kings of Bactria, Agathocles and Antimachus (c. 190–160), are styled 'god' upon the coins. The Arsacid kings of Parthia, if, as adherents of some form of Zoroastrianism, they recognized only One Supreme God, found no difficulty in giving the name of 'god' to subordinate powers, and in classing them-

¹ Something of the same sort seems to be implied when the Pergamene king is called *Ταύροιο διοτρεφέος φίλον υἱόν* (Paus. x. 16. 2; cf. Suidas, s.v. Ἀτταλός), i.e. son of the divine Bull, Dionysos.

selves among the number. Here, too, on some of the coins the name of the king is accompanied by the epithet *θεοῦ* or *θεοράτορος* (Wroth, *Coins of Parthia*, 1903, p. xxix). So, too, the Sasanian kings (after A.D. 224) continued to bear the title of *θες* (Pers. *bag*); but, whilst the Greek was ambiguous, in the native language the distinction between the lower divinity of the human deity and that of the gods proper was made plain by another word (*yazdān*) being reserved for these last (Ditt. *Inscr. Orient.* i. 432, 433). So far, then, from its being the case that the deity of the human ruler was an idea borrowed by the Greeks from the East, the borrowing was the other way; the Orientals took it from the Greeks.

Even the minor dynasties of the East came to bear divine titles. So Antiochus I. of Commagene describes himself as *θεός* in the same breath with which he professes piety to be the rule of his life, on the monument where his body rests after his soul has gone to the 'heavenly seats of Zeus Oromasdes.' The honours to be paid to himself and the other kings are distinguished, as 'heroic' (lines 48, 118, 125), from the cult of the greater gods. His own image is *συνθρονος* with that of Zeus-Oromasdes, Mihra, Artagnes, and Commagene (line 60) (Ditt. *Inscr. Orient.* i. 383). The Jewish Herod Agrippa I. received from heathens the now banal ascription of deity (Ac 12²; Jos. *Ant.* xix. 8. 2).

Even in the age of the Hellenistic kings, deification was not their peculiar prerogative. It was open to other men, in their degree, to become objects of religious worship. Sometimes they might secure this by the authority of the kings themselves. Antiochus II. had his favourite Pytherrmus worshipped as Herakles (Athen. vii. 289 f.), and Ptolemy II. consecrated his mistress Bilistiche as Aphrodite (Plut. *Amat.* 9). Consecration sometimes took place by the authority of a Greek State.

So Athens conferred *heroic* honours after his death upon Diogenes, who had commanded the Macedonian garrison in the Piræus (title of *εὐεργέτης*, priest, *τέμενος*, games [CIA ii. 467, 24; 481, 57; 1689]). Aratus after his death was worshipped with *heroic* honours at Sicyon; and, as in the case of the deified kings, it was asserted that his mother had really conceived him of a god (Polyb. viii. 14. 7; Plut. *Arat.* 53; Paus. ii. 8. 2, 9. 4). Philopomen after his death was worshipped with *divine* honours at Megalopolis (altar, *τέμενος*, games [Plut. *Philop.* 21; Paus. viii. 61. 2; Diod. xxix. 18; Liv. xxxix. 50; Ditt. *Syll.* 210]).

Probably to this age, and not an earlier, belongs the consecration of the athletes of former generations who had brought glory to their cities, like Theagenes, who was worshipped as a god at Thasos (Paus. vi. 11. 2), Oebotas of Dyme (Paus. vi. 3, vii. 17. 3 and 6), and Diognetus the Cretan (Ptol. *Heph. ap. Phot. Bibl.* p. 151a, 20). Other consecrations were the act of guilds or associations, who worshipped their founders or distinguished members. So we find a guild of Dionysiastæ (2nd cent. B.C.) in the Piræus 'heroizing' a certain Dionysius (*ὁπὸς ἀφῆρωσθαι Διονύσιος*) (*Mithr. Ath.* ix. [1884] 279 f., 288 f.), and something like a heroic cult of their founder was maintained in the philosophical schools created in the form of religious guilds by Plato and Epicurus. In the case of Plato, the story of a miraculous birth was again circulated; he was the son of Apollo (Diog. Laert. iii. 1. 2; Olympiod. *Vit. Plat.*). So, too, Hippocrates seems to have been worshipped in schools of medicine, not in Cos only, but in the Greek world generally (Luc. *Philops.* 21). Sometimes the consecration took place according to testamentary dispositions, which founded an association for the cult of the testator, as in the case of a family of Thera, whose *herōon* is the subject of the will of Epicteta (*CIG* 2448), and in the case of Epicurus.

VOL. IV.—34

When the power began to pass from the hands of kings to that of Rome, the Greeks, in transferring their homage, continued the forms of religious worship. The cult which replaced that of the Hellenistic kings was that of the goddess Rome. Smyrna was the first Greek city to erect a temple to Rome in 195 B.C. (Tac. *Ann.* iv. 56), and the cult later became general. The Roman general Titus Flamininus a few years later was receiving divine honours in Greece (Plut. *Flamininus*, 16). In the last cent. B.C. it seems to have become the usual thing for Roman governors to be worshipped by the provincials under their rule (Cic. *ad Q. frat.* i. 1, 26, cf. *ad Att.* v. 21; Suet. *Aug.* 52); the notorious Verres in Sicily had games (*Verria*) celebrated in honour of his divinity (Cic. *Verr.*, Orat. ii. 2. 21). Of the numerous temples erected to Pompey (*τῷ ναίῳσι βελθόντι πύση σπάνις ἐπλετο τύμβου*, *Anth. Pal.* ix. 402) no material trace has been recovered; but two inscriptions, one from Ephesus and one from the island of Carthæa, show the sort of worship offered to Julius Cæsar by the Greeks in his day of power. The first (*CIG* 2957) describes him as 'God manifest and universal saviour of humanity'; and the second (*CIG* 2369), as 'God and Emperor and Saviour of the world.' But now the ruling race itself was prepared to follow the Greek fashion.

2. Deification under the Roman Empire.—For the old Romans the gap between gods and men was not bridged as it was for the Greeks. They had indeed, like other primitive peoples, rites for placating the spirits of the dead (*di manes*), but such spirits did not pass into gods proper; there was no intermediate class of heroes. The offering of divine honours to living men would have seemed to them highly shocking. As, however, the Greek element grew in Rome, new ideas found entrance. Scipio Africanus was not worshipped, but there was believed to be something supernatural about him, and stories were told of his divine birth (Liv. xxvi. 19). In the last century of the Republic, rites proper to divine worship were offered to Metellus Pius (Macrobi. *Sat.* iii. 13. 7) and Marius Gratiadianus (Cic. *Off.* iii. § 80; Seneca, *de Ira*, iii. 18); but in the former case by private friends, members of a Hellenized aristocracy; in the latter, by a semi-Hellenic populace; in neither case, with official authorization.

The note of that Empire which Julius Cæsar conceived was an assimilation in which the old Roman tradition lost its prerogative. Under his rule the Roman people were allowed (Suet.) or encouraged (Dio) to adopt the Greek forms of homage. The image of Cæsar now figured along with those of the gods. A month of the year was called by his name. In 45 B.C. a temple was even founded to Juppiter Julius and his Clementia, in which M. Antony was to serve as flamen (Dio Cass. xlv. 6; Suet. *Cæs.* 76; App. *Bell. Civ.* ii. 106). On Cæsar's murder in 44 the scheme collapsed (Cic. *Phil.* ii. 43); but in the comet which appeared the following year the Roman populace saw Cæsar's spirit raised to heaven (Plin. *HN* ii. 94; Virg. *Ec.* ix. 47; Ov. *Metam.* xv. 843 ff. etc.). When the Cæsarian party triumphed, the worship of the dead Cæsar was put upon a regular footing; public policy was now shaped by the cautious spirit of his nephew. A law passed by senate and people set Divus Julius among the gods, and a temple was erected (42 B.C.) to him on the spot where his mangled body had been displayed to the people (Dio Cass. xlvii. 18; App. ii. 148; *CIL* i. 626, ix. 2628). There is no reason to suppose that *divus* had at this time acquired a meaning different from *deus*; it was the precedent of the Cæsars which limited it to those divinities who had once been men (Mommson, *Staatsr.* ii.* 756, note 1; Wissowa.

p. 285). In *CIL* x. 3903, we find *dei Caesaris* alongside of *divi Augusti* (cf. *ib.* 1271). So, too, we find *Καῖσαρ ὁ θεός* as the proper designation of Julius Cæsar in Greek (Strabo, viii. 381, etc.).¹ From Rome the worship soon spread to other places. An altar of Divus Julius is mentioned at Perusia in 41 (Dio Cass. xlviii. 14; cf. *CIL* i. 697, 698). In the Western provinces the cult seems to have been maintained only in the colonies founded by Julius Cæsar. Antony and Sextus Pompeius, who disputed with the adoptive son of the *divus* the empire of the world, each advanced his own claims to divinity. Antony masqueraded in the character of Dionysos, and at Athens followed the precedent of Antiochus Epiphanes by demanding a dowry as the husband of the city-goddess (Plut. *Ant.* 24; Dio Cass. xlviii. 39; Athen. iv. 148; M. Seneca, *Suas.* i. 6; Vell. Pat. ii. 82; Plin. *HN* viii. 55). Sext. Pompeius claimed to be the son of Neptune (Dio Cass. xlviii. 19; App. v. 100; Plin. *HN* ix. 55). When the young Cæsar stood forth supreme and brought to the vexed world an era of peace, the tide of worship could not be stayed. But the temper and policy of the new ruler inclined him rather to reduce such honours to their minimum, and among the Romans to bring them into connexion with the national tradition rather than with foreign usage. In 27 B.C. he accepted from the Senate the name of *Augustus*, which connoted sanctity without asserting absolute divinity (Dio Cass. liii. 16; Suet. *Aug.* 7; Ovid. *Fasti*, i. 609; Censorinus, *de Die Nat.* 21. 8). He showed the same moderation in the provinces.

But first three sorts of cults offered to the Emperor must be distinguished: (1) the *provincial* cult, maintained by each province as a whole at one of the provincial centres; (2) the *municipal* cults, maintained by the separate cities; (3) the *private* cults, maintained by individuals or voluntary associations. The first were far more completely controlled (if not instituted) by the Imperial Government; and to them alone strictly applies the rule laid down by Augustus, that he was not to be worshipped save in association with the goddess Rome. Asia and Bithynia were the first provinces to be authorized to establish a provincial cult of this sort; and temples to Rome and Augustus were reared at Pergamum and Nicomedia. This permission did not extend to resident Roman citizens; they were to worship, not Augustus, but Rome and Divus Julius in temples of their own at Ephesus and Nicæa (Dio Cass. li. 20; cf. Tac. *Ann.* iv. 37). In the West the first provincial cult seems to have been instituted in 10 B.C., when an altar was consecrated to Rome and Augustus at Lugdunum (Lyons) for the province of the Three Gauls. A few years later a similar altar was consecrated for Germania at Oppidum Ubiorum (Cologne). To the municipal and private cults much greater liberty was allowed. In ordinary practice, however, the cities seem under the early Empire to have combined the name of Augustus with that of Rome. The cult instituted in A.D. 11 by the colony of Narbo is addressed to the *numen* of Augustus alone (*CIL* xii. 4333). Or, again, the municipal and private cults might emphasize the Emperor's deity by giving him the name and attributes of some traditional god. In Egypt and Caria, Augustus is Zeus Eleutherios (Καῖσαρ, ποταμοῦδοντι καὶ ἀνελπον κρατῶντι | Ζεὺς τῷ ἐκ Ζανὸς πατρὸς Ἐλευθερίῳ, *CIG* 4923; cf. 4715; *BCH* xi. [1887] 306; and the expression 'god of god,' i.e. son of Divus Julius, in Ditt.

Inscr. Orient. 655); at Alabanda in Caria, Apollo Eleutherios (*CIG* 2903f=Ditt. *Inscr. Orient.* ii. 457). At Athens the temple begun by Pisistratus to Zeus Olympios was consecrated to the *genius* of Augustus (Suet. *Aug.* 60). Not only Augustus himself, but other members of the Imperial family become objects of worship. Athens honours his grandson Gaius as νέος Ἄρης (*CIA* iii. 444); Mitylene, his son-in-law Agrippa as θεός σωτήρ (*CIG* 2176); Nyssa has a special priest for his stepson Tiberius (*CIG* 2943). A temple was consecrated to Octavia after her death by Corinth (Paus. ii. 3. 1). The first day of each month in Egypt and Asia was called Σεβαστή (Kaibel, *Inscr. Græc. Sic.* 1890, p. 701). Games, among the Greeks a form of religious festivity, were everywhere instituted in honour of Augustus or members of the Imperial house (Ἱερῶνα Σεβαστῶν, Κασιόρῳ Ἀγριππῶν, Ditt. *Syll.* 2 677; Suet. *Aug.* 98, etc.). Even king Herod built temples and instituted games to Augustus and Rome (Jos. *BJ* i. 21, §§ 403f.). In Italy the cult of Augustus seems to have spread largely before his death; temples and priests (*sacerdotes* in some places, *flamines* in others) are found in existence, at any rate, in colonies which Augustus had founded, and in cities of which he was in some way the patron (Beneventum, Cumæ, Fanum, Fortunæ, Pisæ; see Beurlier, *Culte impérial*, p. 17; Hirschfeld, p. 838). It was at Rome that the worship was most severely restrained. The Emperor refused to be saluted by his fellow-citizens as god, or to allow a temple to him to be erected in the capital. But he permitted his name to be inserted in the ancient hymns of the Salii (Mommsen, *Res gestæ divi Aug.*, 1883, p. 44), and the *Genius Augusti* to be worshipped along with the *Lares* of the city—i.e. so far as the worship of a living man was admitted, it must put off its alien complexion and be screened by the formulæ of the national religion, though here again the restraint could not extend to the action of individuals or the exuberant language of literature.

The poets, inspired as they were by Greek ideals, and using the old mythological conceptions without any belief in their literal truth, let their fancy run free in expressing the Emperor's deity (Virg. *Georg.* i. 24f.; Hor. *Od.* iii. 3. 11; 5. 1f., 25. 4ff., etc.).

In Rome, too, men found pleasure in identifying the Emperor with some particular one of the old gods; sometimes it was Apollo (Suet. *Aug.* 70; Serv. ad *Ecl.* iv. 10); sometimes it was Mercury (Hor. *Odes*, i. 2. 41f.); cf. Reitzenstein, *Poimandres*, 1904, p. 176f.); sometimes it was Juppiter (Hor. *Epist.* i. 19. 43; Preller-Jordan, *Röm. Myth.* ii. 445).

When Augustus died (A.D. 14), the Roman people might at last worship him without restraint. After the precedent set in the case of Julius Cæsar, he was declared a *divus* by a decree of the Senate. As the timely appearance of a comet was not to be counted upon, an eagle was liberated at the funeral, to represent visibly the soul of the Emperor flying to heaven; and a senator was found to bear witness to having seen the actual Emperor ascend (Suet. *Aug.* 100). Tiberius followed his predecessor in restraining the divine honours offered to himself. It is only due to his resolution that we do not to-day say 'Tibery' for September or October, as we say 'July' and 'August' in memory of the first two *divi*. The Greeks, indeed, were permitted as before to worship the living Emperor, and to consecrate temples to himself and his mother Livia, while the merely figurative character of the worship was emphasized even more than before by the 'God-Senate' (θεός σύγκλητος) taking the place of the goddess Rome in the cults maintained with Imperial sanction by the provincial centres (Tac. *Ann.* iv. 15). Municipal priests of Tiberius are found in one or two Italian towns (Venusia, Surrentum)

¹ That the Daphnis who is deified in Virgil, *Ec.* v., represents Julius Cæsar was suggested by the scholars of antiquity and is commonly repeated to-day. Daphnis has, however, nothing but his deification in common with Cæsar; and, since the deification was a part of the old Sicilian story, it forms a very slender ground for the identification.

(Hirschfeld, p. 842), but in Rome itself no such cult was tolerated, nor would Tiberius entertain the request of the province Bætica to be allowed to build a temple to him and his mother (Tac. *Ann.* iv. 37, 38). The worship of Divus Augustus, on the other hand, Tiberius piously furthered. A temple was begun to him in Rome; and, whereas only altars had hitherto been erected to him in the Western provinces, Tarraco was allowed in A.D. 15 to build him a temple (Tac. *Ann.* i. 78). In the East, Cyzicus was even punished for slackness in this cult (Tac. *Ann.* iv. 36). The severity with which the transgressions of individuals were visited increased as the reign of Tiberius went on. It became punishable even to change one's garments before an image of Augustus, or carry a ring with his effigy engraved upon it into an unclean place (Suet. *Tib.* 58). At the death of Tiberius it was seen that the formality of consecration, if religiously empty, had some political value as a verdict passed upon a deceased ruler by his subjects. The Senate refused to raise Tiberius to divinity. It had, indeed, not improbably been the intention of Tiberius that consecration should by no means become a rule, but should be confined to the founders of the dynasty, Julius and Augustus. But Caligula, who succeeded him (A.D. 37), was so far his opposite that he claimed the honours which Tiberius had repelled. No mummery was too extravagant for this wretched maniac. A temple was built for him on the Palatine; he made himself the equal of Jupiter, and the Roman aristocracy were compelled on pain of death to offer him all the forms of religious homage. On his assassination in 41, the Senate refused him also divinity; his reign was a mad episode; but under Claudius we register further developments of a lasting kind in the worship of the Emperors. Caligula had already caused his sister Drusilla to be consecrated by the Senate as the first *diva*. Claudius had his grandmother Livia associated as *diva* with her husband Divus Augustus (Suet. *Claud.* 11; Dio Cass. ix. 5); and he permitted (between A.D. 50 and 54) a temple (not an altar) to be erected to himself in Britain at Camulodunum (Tac. *Ann.* xiv. 31; Sen. *Apokol.* 8; cf. Kornemann, p. 102, note 2; Toutain, *Cultes païens*, p. 86). Claudius after his death (54) became the third *divus* by decree of the Senate; his elevation provoked the lampoon called *Apokolokyntosis*, which has come down to us among the works of Seneca.

After the precedent set by the elevation of Claudius, consecration became a normal formality at the decease of every Emperor, unless it was desired to affix a stigma to his reign. The outlines of the worship of the Emperors remained very much as they had come to shape themselves under Augustus, Tiberius, and Claudius, i.e. in the Greek East various local cults of the reigning Emperor, whilst at the provincial headquarters the cult of Rome and Augustus became, after the apotheosis of Claudius, a cult of the *θεοὶ Σεβαστοί*, among whom the reigning Emperor was included; in the Western provinces, the cult of Rome and (the first) Augustus became a cult of Rome and (the reigning) Augustus or 'Romæ et Augustorum.' Beside the original altars, temples would seem to have generally arisen after the precedent of Tarraco; at Lyons, in the latter part of the second century, the altar was consecrated to the cult of the reigning Emperor ('Cæsaris nostri'), the temple to the deceased Augusti (Kornemann, p. 109). It also remained common for other members of the Imperial family to be consecrated on their decease (Poppæa and her daughter under Nero, Domitilla, the wife of Vespasian, the infant son of Domitian, the father of Trajan, etc.), although after Hadrian the privilege seems generally to have been restricted to

Empresses¹ (see list of *divi* in Beurlier, p. 325 f.). And, although the worship of the living Emperor was not usually countenanced in Rome, the worship of his *numen* or *genius* was part of the official religious system. The oath generally recognized in the business of the Empire was by the genius of the Emperor (ὁ Σεβαστοῦ ὄρκος, cf. Apul. *Metam.* ix. 41). In the laws of Salpensa and Malaga the formula for swearing inserts, between Jupiter and the *penates*, first the list of consecrated *divi*, and then the genius of the reigning Emperor.

None but the worst Emperors followed Caligula in demanding for themselves divine honours during their lifetime. Nero did so, and a temple to him as *divus* would have been erected in Rome but for its ill omen, 'for the honour of the gods is not conferred upon the ruler before he has ceased to act among mankind' (Tac. *Ann.* xv. 74). Domitian established a worship of himself, and was addressed at court as 'dominus et deus' (Dio Cass. lxxvii. 13; Suet. *Dom.* 13; Martial, v. 8). Commodus had himself worshipped as Hercules, and was fond of masquerading with club and lion-skin (Lamprid. *Commod.* 8, 9; Herodian, i. 14. 9, 15. 2-5).² Aurelian (A.D. 270-275) was the first Emperor of sound understanding who took to himself the titles of divinity ('dominus et deus'), but he already had conceived the idea of giving the Roman autocracy an expression no less ceremonious than that of Oriental monarchy. What Aurelian conceived Diocletian (A.D. 284-305) carried out. Among his measures was one to introduce the custom of prostration, and to take for himself and his colleague the names of Jovius and Hercules. When Christianity became dominant with Constantine, worship of the earthly sovereign had, of course, to cease. To the forms, however, of the old worship a political or social value had come to attach which made it difficult to abolish them absolutely. The Christian Emperors as late as Valentinian I. (A.D. 364-375) were officially consecrated after their death (Ausonius, *Gratiar. act.* 7), and the use of the term *divus*, in common parlance, of a deceased Emperor continued for centuries (Gregory of Tours, *Hist. Franc.* ii. 8; *Cod. Just.* v. 27. 5, etc.). The provincial temples of the Emperor had become so much a centre for public festivities, etc., that Constantine allowed them to continue, stipulating, however, that no rites of pagan sacrifice should be performed in them (Wilmanns, *Exempla Inscr. Latin.* [1873] 2343, l. 45 f.). Such temples were no longer dedicated to any Emperor personally, but to the Imperial Family (*gens Flavia*) in the abstract. The priests of the Imperial cult and the *sacerdotes* (ex-priests) had come to form an important element in the cities of the Empire, discharging secular as well as religious functions. These, therefore, the Christian Empire allowed to subsist. Since, however, they still bore the insignia of old pagan *coronati* or *sacerdotes*, there was a feeling against them among the religious (Synod of Elvira, Canon 55). Christians did, indeed, accept the office (*CIL* viii. 8348), but Pope Innocent I. (Mansi, iii. 1069) pronounced that all who had done so after baptism were disqualified for the Christian priesthood. The municipal *flamines* continued locally as secular officials with the old name as late as Justinian (*CIL* viii. 10516; cf. Synod of Elvira, canons 2 and 3).

We have seen that the offering of divine honours to men arose among the Greeks as a formality

¹ Such consecration did not, however, imply necessarily the persistence of the cult when the Imperial power had passed to other families.

² It was always, of course, possible for private persons to use forms of flattery, and the Imperial portraits which have come down to us often represent them in the conventional guise of some old divinity, the Emperors especially as Demeter; this need not signify more than the fancy of some individual.

whose religious significance was mainly that it showed how empty religion generally had become. Can we say the same of the mass of organized cults we have just surveyed—cults which endured throughout the Græco-Roman world for more than three centuries? It is obvious that to some extent we can. Among the Roman aristocracy, among the better educated people everywhere, the ascription of deity to the living Emperor, if not mere flattery, as in the case of the Augustan poets, was no doubt understood in a metaphorical sense which emptied it of value properly religious. The better Emperors, as we saw, repelled such homage, and Vespasian jested on his death-bed at the court fiction ('Vae, puto, deus fio,' Suet. *Vesp.* 23).

But how, if these practices had so little meaning, could they go on so widely and so long. The answer to this might perhaps be as follows. (1) The practices were not meaningless in so far as they reposed upon a genuine sentiment, if not, strictly speaking, a religious one. Octavianus Caesar brought the world relief from long anarchy, and for the following centuries order and peace around the Mediterranean were felt to be bound up with the Imperial government. Real feelings of loyalty to the head of the world-State may, therefore, have sought symbolical expression, and the symbol, according to the conditions of the ancient world, could be nothing but a religious formality.¹ The Christians appeared rebels to the civil power when they refused to throw incense upon the altar consecrated to the genius of Augustus. (2) Among the masses of the people, among those to whom the Emperor was a distant and unseen power, some real belief in his deity may have existed. The formalities of worship impressed the mind insensibly, and in the sphere of belief there are notoriously many half-shades that cannot give a clear logical account of themselves. The common oath by the genius of the Emperor must have acted continually to suggest his actual presence. The exclamation 'Ὁ Καίσαρ' seems to have been the one which naturally sprang to the lips of an over-driven menial (Luc. *Lucius*, 16). Especially where the personality of an Emperor had impressed itself upon the popular mind might it be believed that he had at death actually become an operative supernatural power. Images of Marcus Aurelius were to be seen among the *penates* of Roman houses as late as the time of Diocletian, and he was believed to reveal the future to men in dreams (Capitolinus, *Marcus*, 18. 6f.). (3) The cults of the Emperor once established served various interests incidentally. The prestige and profit brought to its locality by an illustrious temple, the festivities and holidays connected with a provincial or municipal cult, would tend to perpetuate it apart from religious motives; the motives to-day which maintain the observance of Christmas or Easter are by no means all religious. So, too, the natural instinct of men to form societies of a friendly or convivial kind could be gratified under cover of Caesar-worship, just as they had been gratified by *quasi*-religious associations under the Ptolemies (cf. the clubs of *Cultores Augusti*, *φιλοσεβαστοί*, etc., in Beurlier, p. 258f.). The cosmopolitan guild of dramatic artists thought it politic to set the name of Hadrian as *πῶς Διόνυσος* alongside of the old Dionysos who was their patron deity. So, too, the social ambitions of the freedman class found an opportunity of gratification in the institution of the *Augustales* in the Latin cities of the Empire (Boissier, *Religion romaine*, i. 162f.).

Deification, we have seen, had not been among

the Greeks and Romans a recognition of the divine right of kings *per se*, but of the material or moral power of individuals. And under the Roman Empire, if the Emperors alone were divine for the whole realm by the theory of the State, other men might attain deity for a particular locality or a particular sect. The deification of widest range after that of members of the Imperial family was that of Antinoos, the youth loved by Hadrian. The Emperor on his death (A.D. 130) encouraged the worship of him as a god; temples and innumerable statues were erected to him, and a star was discovered which was clearly his soul in heaven (Dio Cass. lxi. 11; Paus. ix. 7; Spart. *Had.* 14. 7; *CIL* xiv. 2112, etc.). Theophanes of Mitylene, the friend of Pompey, was worshipped as a god by his native city after his death (Tac. *Ann.* vi. 18; coins of Mitylene), and, similarly, Cnidus voted his contemporary Artemidorus *τίμαλ ἰσθθεοί* (*Inscr. in Brit. Mus.*, no. 787). The vote recorded in the inscription was passed in his lifetime; but the divine honours were probably not to be offered till after his decease. Apollonius of Tyana, according to Philostratus, though he disclaimed deity, was saluted as a god by large numbers of people (iv. 31; cf. iii. 50); Caracalla built a temple to him (Dio Cass. lxxvii. 18), and he continued for long to be an object of popular worship (Vopisc. *Aurelianus*, 24).

The practice of offering *heroic* honours to the dead became much more general in the later times of pagan antiquity. Such honours were sometimes conferred publicly by a city or association as a special distinction, as, e.g., by Tarsus upon the philosopher Athenodorus (pseudo-Lac. *Macrob.* 21; cf. Head, *Hist. Num.*, 1887, p. 488); Athens (*CIA* iii. 889); Cyzicus (*Mitt. Athen.* ix. [1884] 28 f.).¹ But the private consecration of the dead by their relatives and friends became increasingly common in Roman times. Cicero resolved on the 'apotheosis' of his daughter and designed a temple for her (*ad Att.* xii. 36; cf. the temple of Pomptilla, *Inscr. græc. Sic. et It.* 607).² The salutation of the dead as 'hero' or 'heroine' becomes an ordinary formula on grave-stones; *ἡρώων* becomes an ordinary name for a tomb. That many a bereaved person who had such an epitaph engraved meant to imply that his or her dead had actually passed into a life of higher power or beatitude, is shown by such phrases as 'Thou livest as a hero, Thou art not become a dead thing' (*ὅς τις ὡς ἥρωας, καὶ νέκυσ οὐκ ἐγένου*, Kaibel, *Epig. græc.*, 1878, p. 433). But the custom of coupling the title 'hero' in common speech with the name of a dead man became so general that it survived in Christian times, 'hero' being now simply an equivalent of *μακαρῆτης*, 'sainted,' just as in the West *divus* survived as the title of deceased Emperors (Deneken, in Roscher, col. 2547 f.; Rohde, *Psyche*⁴, 646 f.).

E. R. BEVAN.

DEISM.—I. HISTORICAL.—The movement of religious thought known as 'Deism' was of comparatively brief duration. Its rapid rise into notoriety, its short-lived prevalence, and its gradual subsidence all fall within the limits of a single century. Roughly speaking, the beginning of the movement was contemporaneous with the Revolution of 1688. Its epitaph was pronounced in 1790, when Burke could speak of the Deistic writers as already forgotten. Nor is the speedy exhaustion of interest difficult to explain. The conditions which combined to direct men's attention to the Deistic problem were transient; and the whole dispute was too frigid and too little in contact with real life to affect the deeper currents of religious thought. Superficially, much excitement was stimulated, until the air was thick with controversial writings. But, with a few exceptions, neither was any conspicuous literary merit displayed by the controversialists, nor did their arguments penetrate far into the secrets of the spiritual life. This serves to explain why the religious debates of the 18th cent. have faded from the common memory more completely than those of earlier periods. On the other hand, to the student Deism presents special points of interest. English religion would never have reached its present condition if it had not passed through the stage with which we are about to deal.

If the movement is to be understood in relation to the general development of theological thought, it will be necessary to seek for an explanation of its origin in a period when the name 'Deism' had not yet come into vogue, and in speculations the true issue of which was not anticipated by their own authors. Halyburton, in his book entitled *Natural Religion Insufficient* (1714), was the first to name Lord Herbert of Cherbury as the parent of Deism. The charge was endorsed by Leland, whose *View of the Deistical Writers* (1754) contains much carefully amassed material, very useful to later students. Since then Lord Herbert's responsibility, whether to his credit or discredit, has been commonly recognized, and this in spite of the fact that his famous book *de Veritate* was composed with a purpose quite different from that to which its arguments subsequently contributed. The book deserves an epithet often applied in cases where there is little justification for so strong a term. It was, without exaggeration, 'epoch-making.' It initiated a line of thought and a method of religious speculation pregnant with results, the full measure of which has not even to-day been exhausted. No better introduction to the study of Deism can be provided than a brief analysis of the main theses which Lord Herbert sets out to establish. The title of the book, given in full, clearly indicates the writer's purpose: *de Veritate, prout distinguitur a Revelatione, Verisimili, Probabili, et a Falso* (Paris, 1624). At the basis of the author's theory is his belief in the existence of *notitiæ communes*, or innate principles. These he explains in his chapter 'de Instinctu Naturali,' to be distinguished by six marks, viz. Priority, Independence, Universality, Certainty, Practical Necessity, and Immediate Cogency. Ideas to which these marks belong are imprinted on the mind by the hand of God. They are axioms, neither requiring nor admitting proof. When dealing with

the subject of religion, he distinguishes five principles as exhibiting this primary character, and consequently independent of all tradition, whether written or oral. They come direct from a heavenly source and are common to all religions. These five fundamental truths are the following: (1) that God exists, (2) that it is a duty to worship Him, (3) that the practice of virtue is the true mode of doing Him honour, (4) that man is under the obligation to repent of his sins, and (5) that there will be rewards and punishments after death. The axiomatic character claimed on behalf of principles such as these is open to debate, and Lord Herbert's theories were afterwards subjected to damaging criticism by Locke. But, whatever opinion be held as to the validity of Lord Herbert's assumptions, it remains true that in his works we are brought face to face with the principles which lie at the root of Deism. Here we find assertion of the competence of human reason to attain certainty with regard to fundamental religious truths, and insistence upon the indissoluble connexion between religion and the practical duties of life. This is precisely the theme on which the Deistic writers enlarged. The pivot of the whole controversy is the disputed question of the sufficiency of natural reason to establish religion and enforce morality—a sufficiency as vehemently asserted by the Deists as it was denied by their opponents.

Much misunderstanding will be avoided if it be remembered from the outset that the Deistic controversy was in the main philosophical rather than religious. Had it not been so, it would have been incorrect to indicate a metaphysician like Lord Herbert of Cherbury as the forerunner of Deism. Disappointment awaits those who expect to find in the writings of this period any searching analysis of a living spiritual experience. The controversy arose not from the attempt of the soul to explain to itself its joys and fears in the presence of God, but from the desire of the thinker to remove from his theory of the world inconsistencies of which he was continually becoming more uncomfortably conscious. The details of the controversy will show that the chief impulse came from the wish to find a way of reconciliation between the then commonly accepted philosophic view of the Divine nature and the facts of observation. And new facts were the order of the day. It was a period of discovery and of the rapid acquisition of all kinds of knowledge. Information was pouring in with regard to the religious systems of other parts of the earth. It was no longer possible to live in a religious world limited by the horizon of Western Europe. Travellers were bringing home from recently discovered, or re-discovered, countries reports of imposing civilizations, in which the sanctions of civil order were provided by religions of the utmost diversity in origin and character. In this way materials for the study of comparative religion began to be collected, and it became possible to form some conception of the bewildering multiplicity of religious customs, ceremonies, and doctrines throughout the world. No philosophic explanation of man and man's religious faculties could claim to be adequate which left all this mass of new material out of account.

At the same time, other more subtle influences were at work stimulating man's natural desire to unify his knowledge. In the domain of physical science the process of unification was advancing with unparalleled rapidity. The so-called 'natural philosophers,' among whom were numbered the greatest intellects of the day, were engaged in establishing those wide generalizations which have formed the basis of modern science. The visible success thus achieved, deserving and receiving the applause of the world, prompted the philosophic student of religion to search for some wide formula that would cover his facts as satisfactorily as the formula of Newton covered the phenomena of the physical world.

1. Forerunners of Deism.—It is far from easy to form any estimate of the phase of intellectual development through which the nation was passing at the time when it was disposed to accept, or at all events to discuss, the novel theory of religion which the Deists proposed. English philosophy has never flowed in a very wide or deep stream. It is a common reproach that as a nation England has been in the past, and remains to the present day, strangely insusceptible to the influence of abstract ideas. It is difficult to deny the truth of the criticism. Even the controversies of the Reformation were in England decided to a great extent upon practical considerations. Little atten-

whose religious significance was mainly that it showed how empty religion generally had become. Can we say the same of the mass of organized cults we have just surveyed—cults which endured throughout the Græco-Roman world for more than three centuries? It is obvious that to some extent we can. Among the Roman aristocracy, among the better educated people everywhere, the ascription of deity to the living Emperor, if not mere flattery, as in the case of the Augustan poets, was no doubt understood in a metaphorical sense which emptied it of value properly religious. The better Emperors, as we saw, repelled such homage, and Vespasian jested on his death-bed at the court fiction ('*Vac, puto, deus fio*,' Suet. *Vesp.* 23).

But how, if these practices had so little meaning, could they go on so widely and so long. The answer to this might perhaps be as follows. (1) The practices were not meaningless in so far as they reposed upon a genuine sentiment, if not, strictly speaking, a religious one. Octavianus Caesar brought the world relief from long anarchy, and for the following centuries order and peace around the Mediterranean were felt to be bound up with the Imperial government. Real feelings of loyalty to the head of the world-State may, therefore, have sought symbolical expression, and the symbol, according to the conditions of the ancient world, could be nothing but a religious formality.¹ The Christians appeared rebels to the civil power when they refused to throw incense upon the altar consecrated to the genius of Augustus. (2) Among the masses of the people, among those to whom the Emperor was a distant and unseen power, some real belief in his deity may have existed. The formalities of worship impressed the mind insensibly, and in the sphere of belief there are notoriously many half-shades that cannot give a clear logical account of themselves. The common oath by the genius of the Emperor must have acted continually to suggest his actual presence. The exclamation 'Ὁ Καῖσαρ' seems to have been the one which naturally sprang to the lips of an over-driven menial (Luc. *Lucius*, 16). Especially where the personality of an Emperor had impressed itself upon the popular mind might it be believed that he had at death actually become an operative supernatural power. Images of Marcus Aurelius were to be seen among the *penates* of Roman houses as late as the time of Diocletian, and he was believed to reveal the future to men in dreams (Capitolinus, *Marcus*, 18. 6f.). (3) The cults of the Emperor once established served various interests incidentally. The prestige, and profit brought to its locality by an illustrious temple, the festivities and holidays connected with a provincial or municipal cult, would tend to perpetuate it apart from religious motives; the motives to-day which maintain the observance of Christmas or Easter are by no means all religious. So, too, the natural instinct of men to form societies of a friendly or convivial kind could be gratified under cover of Caesar-worship, just as they had been gratified by *quasi*-religious associations under the Ptolemies (cf. the clubs of *Cultores Augusti*, *φιλοεβασταῖοι*, etc., in Beurlier, p. 258 f.). The cosmopolitan gild of dramatic artists thought it politic to set the name of Hadrian as *ῥεός Διόνυσος* alongside of the old Dionysos who was their patron deity. So, too, the social ambitions of the freedman class found an opportunity of gratification in the institution of the *Augustales* in the Latin cities of the Empire (Boissier, *Religion romaine*, i. 162 f.).

Deification, we have seen, had not been among

¹ If the Empire was one, some universal religion was needed to extend over its confused variety of national, tribal, and civic gods. Cf. art. *CÆSARISM*.

the Greeks and Romans a recognition of the divine right of kings *per se*, but of the material or moral power of individuals. And under the Roman Empire, if the Emperors alone were divine for the whole realm by the theory of the State, other men might attain deity for a particular locality or a particular sect. The deification of widest range after that of members of the Imperial family was that of Antinoos, the youth loved by Hadrian. The Emperor on his death (A.D. 130) encouraged the worship of him as a god; temples and innumerable statues were erected to him, and a star was discovered which was clearly his soul in heaven (Dio Cass. lxxix. 11; Paus. ix. 7; Spart. *Had.* 14. 7; *CIL* xiv. 2112, etc.). Theophanes of Mitylene, the friend of Pompey, was worshipped as a god by his native city after his death (Tac. *Ann.* vi. 18; coins of Mitylene), and, similarly, Cnidus voted his contemporary Artemidorus *τύπαι ἑρδθεοῖ* (*Inscr. in Brit. Mus.*, no. 787). The vote recorded in the inscription was passed in his lifetime; but the divine honours were probably not to be offered till after his decease. Apollonius of Tyana, according to Philostratus, though he disclaimed deity, was saluted as a god by large numbers of people (iv. 31; cf. iii. 50); Caracalla built a temple to him (Dio Cass. lxxvii. 18), and he continued for long to be an object of popular worship (Vopisc. *Aurelianus*, 24).

The practice of offering *heroic* honours to the dead became much more general in the later times of pagan antiquity. Such honours were sometimes conferred publicly by a city or association as a special distinction, as, e.g., by Tarsus upon the philosopher Athenodorus (pseudo-Lac. *Macrob.* 21; cf. Head, *Hist. Num.*, 1887, p. 488); Athens (*CIA* iii. 889); Cyzicus (*Mitt. Athen.* ix. [1884] 28 f.).¹ But the private consecration of the dead by their relatives and friends became increasingly common in Roman times. Cicero resolved on the 'apotheosis' of his daughter and designed a temple for her (*ad Att.* xii. 36; cf. the temple of Pomptilla, *Inscr. græc. Sic. et It.* 607).² The salutation of the dead as 'hero' or 'heroine' becomes an ordinary formula on grave-stones; *ἡρώων* becomes an ordinary name for a tomb. That many a bereaved person who had such an epitaph engraved meant to imply that his or her dead had actually passed into a life of higher power or beatitude, is shown by such phrases as 'Thou livest as a hero, Thou art not become a dead thing' (*ἔσθ' ὡς ἥρωας, καὶ νέκυσ οὐκ ἐγένεω*, Kaibel, *Epig. græc.*, 1878, p. 433). But the custom of coupling the title 'hero' in common speech with the name of a dead man became so general that it survived in Christian times, 'hero' being now simply an equivalent of *μακαρῆς*, 'sainted,' just as in the West *divus* survived as the title of deceased Emperors (Deneken, in Roscher, col. 2547 f.; Rohde, *Psyche*, 646 f.).

² Sometimes the dead was represented in the guise of some god, especially Dionysos or Hermes.

he pushed forward the argument. Where Locke had urged the 'reasonableness of Christianity,' Toland would interpret the word 'reasonable' as equivalent to 'not mysterious.' This is not in the least what Locke meant. It is a long step further forward along the road which led to the rejection of Christian belief.

The book was of no particular merit, but, owing to the highly charged condition of the intellectual atmosphere, its publication caused a considerable explosion of indignation. It was condemned by the Irish Parliament and ordered to be burnt. The Lower House of the Convocation of Canterbury took cognizance of it, and would have proceeded further, had not the Bishops decided, on a point of law, to take no action in the matter. Though the ecclesiastical authorities did not move, there was a general feeling that it was an abuse of the recently accorded freedom of the press when a young author put forward such crude and revolutionary views as that 'neither God Himself nor any of His attributes are mysteries to us for want of adequate ideas,' and that so far as any Church allows of mysteries it is anti-Christian (cf. Wilkins, *Concilia*, 1787, iv. 631). Toland desired so to enlarge the jurisdiction of reason as to make it co-extensive with the contents of revelation. In deliberate opposition to the principle of earlier writers,¹ he refused to acknowledge the validity of the distinction between apprehension and comprehension. What man could not comprehend was on that account to be rejected as false. Not content with merely stating this general principle, he attempted to give a historical account of the process by which mystery had intruded itself into a Christianity originally devoid of this baser element. He pointed out, correctly enough, that in the language of the NT the word 'mystery' signified not something incomprehensible, but a secret revealed to the initiated. Hence he inferred that the conception of mystery in the sense of that which is beyond the reach of human understanding was alien from the spirit of original Christianity, and he endeavoured to show that a gradual assimilation of the new faith to the lower type of Jewish and heathen religions, the intrusion of Platonic philosophy, and the ambitious projects of an unscrupulous priesthood were responsible for the deterioration.

Although Toland cannot be credited with any large measure of originality, yet his book marks a critical point in the gradual change of men's views with regard to the comparative authority of reason and revelation. A certain arrogant assertion of superiority on behalf of reason was now substituted for that deference which had hitherto been considered the fitting attitude of the human mind in the presence of knowledge communicated from above. Another and more easily recognizable result of his rash speculations was connected with his theories as to the course of early Church history. The discussion of the views which he set forth stimulated a lively inquiry into the nature and value of the documents on which the historian of that period must depend. In a book entitled *Amyntor*, which was published in 1699, Toland himself, taking part in the discussion, endeavoured—or so it was supposed—to undermine the credit of Scripture by calling attention to the large mass of early Christian literature, and by suggesting covertly that canonical and uncanonical writings alike were the offspring of superstition and credulity.

Another new departure was taken when Anthony Collins, in 1713, published the *Discourse of Free-thinking occasioned by the Rise and Growth of a Sect called Freethinkers*. Collins reiterated and emphasized the claim of reason to pronounce upon the contents of revelation. He advanced beyond the point where Toland had left the matter, by attempting to provide a theoretic justification of the claim to unlimited freedom of inquiry, in all directions, over the whole field of moral and religious speculation. Toland had himself exercised this freedom, but without prefixing any thorough examination of the positive and negative arguments in favour of extending this privilege to all classes. Collins had the acuteness to perceive that the whole of the Deistic argument, involving, as it did, an appeal to the reason of the ordinary man, rested ultimately upon a decision in favour of unconditional individual liberty to pursue in-

vestigation, and upon a conviction of individual capacity to discover the truth. Accordingly he set out systematically to prove that the progress of civilization has been furthered where men have claimed this right for themselves and extended it to others, while, on the other hand, deplorable consequences have ensued wherever the privilege of free thought has been withheld.

In some directions his task was easy. History provided an ample supply of examples of the evils which attend a policy of obscurantism, coupled with a blind and unintelligent deference to external authority. But he adopted a much more questionable position when he maintained that the cause of morality would be benefited by its complete dissociation from all mysterious sanctions whatever. He supported his case by the assertion that the great moral teachers of mankind had appealed, not to the fears, but to the reason, of their hearers. It was the method of the Prophets, of the Apostles, of Christ Himself. On the other hand, the endeavour to enforce belief by any other means than the plain straightforward appeal to the individual reason had been the bane of both Church and State, the source of moral corruption, the cause of every kind of discord, disturbance, and disaster. Bitter attacks are made upon all professional ministers of religion. Invective of this kind was a favourite theme with the Deistic writers, and for various reasons, chiefly political, was not distasteful to the public. The supposed machinations of the clergy served as a convenient explanation of certain facts in the history of religion, which did not easily square with the Deists' theory of contented reliance on the natural reason and instinct of man. From their point of view the prevalence of patently false religions and the persistence of superstitions were anomalies that had to be accounted for. So they sought to save the credit of the natural human reason by fixing the responsibility for these evils upon an intriguing, selfish, and idle priesthood.

Another point to be observed is the markedly utilitarian character of the reasoning employed by Collins. In defending the principle of freedom of thought he calls attention primarily to the desirable consequences which will follow upon its adoption. Like many others of his school, he made expediency a criterion of ethical values. The spirit of the age, devoted to the supposed interests of practical common sense, resented the application of any rule except one calculated on the basis of consequent pleasures and pains.

A later work by the same writer is significant of the transition to yet another phase of the controversy. In the *Discourse of the Grounds and Reasons of Christian Religion* (1724), Collins forsakes the question of the relative reasonableness or unreasonableness of the contents of the Christian Revelation, and turns to an inquiry into the credibility of prophecy and miracle. It had been a recognized mode of traditional Christian apology to rest the case for Christianity on two main supports—the correspondence of NT facts with OT prophecies, and the miraculous powers displayed by Christ and the Apostles. So long as the Biblical record remained unquestioned and uncriticized, this position was strong enough to withstand assault. But, now that the spirit of criticism had begun to throw suspicion upon the authenticity and the good faith of the Biblical documents, serious weaknesses in this line of defence revealed themselves, of which the innovators were quick to take logical advantage. If the facts were doubtful, what became of the argument from correspondence with prophecy and from miracle? So began the long debate over the 'external' evidences of Christianity. It was a descent from the comparatively higher level of an inquiry into the fundamental truths of religion to undignified and often vituperative disputes over the veracity of the Apostles and the other NT writers. But, although the tendency to substitute this less important issue showed itself as early as the third decade of the century, it was not till some years later that the change became general.

Christianity as old as the Creation, or the Gospel a Republication of the Religion of Nature, was published in the year 1730. Its author, Matthew Tindal, Fellow of All Souls' College, Oxford, had passed through various changes of religious belief, and did not bring out this, his best-known work, till near the end of a long life. It was at once recognized as a noteworthy contribution to the controversy. It was sober and restrained in tone, and

¹ e.g. Bacon, 'Concludamus theologiam sacram ex verbo et oraculis Dei, non ex lumine naturae aut rationis dictamine hauriri debere' (*de Augm. Scient.* ix. l.).

tion was for the most part paid to the examination of first principles. An exception to the general rule, however, is afforded by Hobbes († 1679). Together with other writers of the time, he exhibits a strong prejudice against the scholastic philosophy. In certain respects he represents, with some characteristic English peculiarities, the sceptical tendency of the Renaissance. It was, indeed, chiefly as an exponent of political philosophy that he made his mark and arrested the attention of his contemporaries. With the political theories which he defended, and with the controversies which ensued, we are not concerned. His importance in relation to the course of religious speculation lies rather in the temper which he contributed to produce than in the acceptance of his principles by any body of disciples. His self-sufficiency, his obvious one-sidedness, his disregard of necessary qualifications, and his rigorous insistence on the most paradoxical conclusions from his premisses aroused an angry opposition. Hence it is not surprising to come across the statement that, while he had innumerable opponents, his supporters numbered but one. It was a true instinct which made the men of his time feel that the tendency of the *Leviathan* was in the direction of a thoroughgoing infidelity. The literature of the Restoration bears witness to the existence of a general opinion that danger was to be apprehended from the spread of his influence. Though Hobbes himself was utterly opposed to that kind of natural religion which afterwards formulated itself as Deism, yet he was, in fact, one of the pioneers of the movement. As much as any other single writer he gave the impulse to religious speculation, and, by helping to shake the old confidence in tradition, contributed to the removal of one of the main obstacles to the introduction of Deism.

Another and a very different element at work in the intellectual life of the nation was derived from the influence of the Cambridge Platonists (*q.v.*). They were a small body standing much aloof from the general life of the country, who from the vantage ground of academic seclusion surveyed the troubled course of the political struggle and the contentions of the warring sects. For themselves, they desired to establish on rational grounds a Christian philosophy, leaving to others the barren victories in the field of popular controversy. In them the genuine philosophic instinct to pursue the search for ultimate truth was unmistakably present. It was their dominant motive. Influenced by the wide-spread reaction against the Aristotelianism of the Middle Ages, they discovered, in a modified form of Platonism, a theory which afforded satisfaction alike to their religious and to their intellectual requirements. In the forefront of their system they placed the conception of the human reason as receptive of illumination from the Divine source. From the elevation of the standpoint thus attained—so it seemed to them—the questions at issue between the sects were reduced to their true dimensions, and lost the exaggerated importance which had been conventionally attached to them. In the speculations of these students the ethical motive is markedly prominent. They insisted on the immutability of the moral law and on its independence of any positive commands, human or Divine. For the most part they were inclined to abstain from controversy. But some of them found it expedient to meet the theories of Hobbes with an explicit refutation. Against his materialism, and his speciously simple reduction of all human motives to various manifestations of self-love, they opposed their Platonic idealism and their belief in the existence of moral principles to which an inviolable obligation essentially belonged.

At first sight it might appear paradoxical to maintain that two systems so consciously and directly opposed to one another as those of Hobbes and the Cambridge Platonists both helped to prepare the ground for the growth of Deism. But it will be remembered that the effect of the writings of Hobbes has been described as in the main negative. He helped to sap the defences of authority, whereas the Cambridge School contributed something more positive, accustoming the minds of men to the hope of finding in their own reason a judge capable of bringing to an end the weary series of doubtful disputations over matters of faith.

In a still more marked degree is it true that the writings of Locke († 1704) produced an effect upon the current of religious thought which he neither intended nor approved. Locke was not a Deist, though the reproach was naturally enough cast in the teeth of the man apart from whose influence Deism would never have enjoyed the vogue to which it eventually attained. While his relation to the movement was unquestionably close and intimate, it was at the same time far from simple. For not only did the Deists profess to draw their inferences from his principles, but many, perhaps most, of the opponents of the movement likewise were convinced adherents of his philosophy. Locke may therefore be said to have laid down the lines along which the controversy was destined to move. This he did, above all, by his short but very significant work on the *Reasonableness of Christianity* (1695; see art. LOCKE). In the pages of the writers who followed along the path where he led the way we shall find the same ostensible attempt to simplify the ancient faith, at first with an apologetic purpose, then with a gradually increasing and more overt hostility; the same principle of discrimination between the supposed valuable and worthless elements of the Creed; the same pre-eminence assigned to the ethical teaching of Christianity; the same conception of religion as a moral philosophy and a code of precepts rather than a power enabling the enfeebled will; the same treatment of miracles and prophecy as external evidences of the truth of the claims of Christianity; the same anxiety to discover a reconciliation between belief in the absolute impartiality of the Divine goodness and the position of privilege assigned to revealed religion. It would not, of course, be true to say that all these ideas were novel when they were propounded by Locke. Many of them had already a long history behind them, and had provided the subject-matter of mediæval disputations. But what is worthy of remark is that here, for the first time, we meet them in systematic combination with one another. They are made to converge upon a certain point, and to conduct to a conclusion which involves certainly the modification, and possibly the repudiation, of important elements in the hitherto accepted creed.

2. Deism in progress.—Those who wish to be supplied with a chronological list of the Deistic writers may be referred to the work of Leland (see Literature at end). It will be more profitable for our present purpose to select certain writers, not necessarily those of the greatest reputation, but those most typical because representative of some critical moment in the development of the movement. Of these the first to deserve mention is John Toland, who in 1696 published his *Christianity not mysterious, showing that there is nothing in the Gospel contrary to Reason nor above it, and that no Christian Doctrine can properly be called a Mystery*. The author claimed to be drawing the natural inferences from the premisses of Locke's philosophy; and the title of the book indicates clearly enough in which direction

he pushed forward the argument. Where Locke had urged the 'reasonableness of Christianity,' Toland would interpret the word 'reasonable' as equivalent to 'not mysterious.' This is not in the least what Locke meant. It is a long step further forward along the road which led to the rejection of Christian belief.

The book was of no particular merit, but, owing to the highly charged condition of the intellectual atmosphere, its publication caused a considerable explosion of indignation. It was condemned by the Irish Parliament and ordered to be burnt. The Lower House of the Convocation of Canterbury took cognizance of it, and would have proceeded further, had not the Bishops decided, on a point of law, to take no action in the matter. Though the ecclesiastical authorities did not move, there was a general feeling that it was an abuse of the recently accorded freedom of the press when a young author put forward such crude and revolutionary views as that 'neither God Himself nor any of His attributes are mysteries to us for want of adequate ideas,' and that so far as any Church allows of mysteries it is anti-Christian (cf. Wilkins, *Concilia*, 1737, iv. 631). Toland desired so to enlarge the jurisdiction of reason as to make it co-extensive with the contents of revelation. In deliberate opposition to the principle of earlier writers,¹ he refused to acknowledge the validity of the distinction between apprehension and comprehension. What man could not comprehend was on that account to be rejected as false. Not content with merely stating this general principle, he attempted to give a historical account of the process by which mystery had intruded itself into a Christianity originally devoid of this baser element. He pointed out, correctly enough, that in the language of the NT the word 'mystery' signified not something incomprehensible, but a secret revealed to the initiated. Hence he inferred that the conception of mystery in the sense of that which is beyond the reach of human understanding was alien from the spirit of original Christianity, and he endeavoured to show that a gradual assimilation of the new faith to the lower type of Jewish and heathen religions, the intrusion of Platonic philosophy, and the ambitious projects of an unscrupulous priesthood were responsible for the deterioration.

Although Toland cannot be credited with any large measure of originality, yet his book marks a critical point in the gradual change of men's views with regard to the comparative authority of reason and revelation. A certain arrogant assertion of superiority on behalf of reason was now substituted for that deference which had hitherto been considered the fitting attitude of the human mind in the presence of knowledge communicated from above. Another and more easily recognizable result of his rash speculations was connected with his theories as to the course of early Church history. The discussion of the views which he set forth stimulated a lively inquiry into the nature and value of the documents on which the historian of that period must depend. In a book entitled *Amyntor*, which was published in 1699, Toland himself, taking part in the discussion, endeavoured—or so it was supposed—to undermine the credit of Scripture by calling attention to the large mass of early Christian literature, and by suggesting covertly that canonical and uncanonical writings alike were the offspring of superstition and credulity.

Another new departure was taken when Anthony Collins, in 1713, published the *Discourse of Free-thinking occasioned by the Rise and Growth of a Sect called Freethinkers*. Collins reiterated and emphasized the claim of reason to pronounce upon the contents of revelation. He advanced beyond the point where Toland had left the matter, by attempting to provide a theoretic justification of the claim to unlimited freedom of inquiry, in all directions, over the whole field of moral and religious speculation. Toland had himself exercised this freedom, but without prefixing any thorough examination of the positive and negative arguments in favour of extending this privilege to all classes. Collins had the acuteness to perceive that the whole of the Deistic argument, involving, as it did, an appeal to the reason of the ordinary man, rested ultimately upon a decision in favour of unconditional individual liberty to pursue in-

¹ e.g. Bacon, 'Concludamus theologiam sacram ex verbo et oraculis Dei, non ex lumine naturae aut rationis dictamine hauriri debere' (*de Augm. Scient.* ix. l.).

vestigation, and upon a conviction of individual capacity to discover the truth. Accordingly he set out systematically to prove that the progress of civilization has been furthered where men have claimed this right for themselves and extended it to others, while, on the other hand, deplorable consequences have ensued wherever the privilege of free thought has been withheld.

In some directions his task was easy. History provided an ample supply of examples of the evils which attend a policy of obscurantism, coupled with a blind and unintelligent deference to external authority. But he adopted a much more questionable position when he maintained that the cause of morality would be benefited by its complete dissociation from all mysterious sanctions whatever. He supported his case by the assertion that the great moral teachers of mankind had appealed, not to the fears, but to the reason, of their hearers. It was the method of the Prophets, of the Apostles, of Christ Himself. On the other hand, the endeavour to enforce belief by any other means than the plain straightforward appeal to the individual reason had been the bane of both Church and State, the source of moral corruption, the cause of every kind of discord, disturbance, and disaster. Bitter attacks are made upon all professional ministers of religion. Invective of this kind was a favourite theme with the Deistic writers, and for various reasons, chiefly political, was not distasteful to the public. The supposed machinations of the clergy served as a convenient explanation of certain facts in the history of religion, which did not easily square with the Deists' theory of contented reliance on the natural reason and instinct of man. From their point of view the prevalence of patently false religions and the persistence of superstitions were anomalies that had to be accounted for. So they sought to save the credit of the natural human reason by fixing the responsibility for these evils upon an intriguing, selfish, and idle priesthood.

Another point to be observed is the markedly utilitarian character of the reasoning employed by Collins. In defending the principle of freedom of thought he calls attention primarily to the desirable consequences which will follow upon its adoption. Like many others of his school, he made expediency a criterion of ethical values. The spirit of the age, devoted to the supposed interests of practical common sense, resented the application of any rule except one calculated on the basis of consequent pleasures and pains.

A later work by the same writer is significant of the transition to yet another phase of the controversy. In the *Discourse of the Grounds and Reasons of Christian Religion* (1724), Collins forsakes the question of the relative reasonableness or unreasonableness of the contents of the Christian Revelation, and turns to an inquiry into the credibility of prophecy and miracle. It had been a recognized mode of traditional Christian apology to rest the case for Christianity on two main supports—the correspondence of NT facts with OT prophecies, and the miraculous powers displayed by Christ and the Apostles. So long as the Biblical record remained unquestioned and uncriticized, this position was strong enough to withstand assault. But, now that the spirit of criticism had begun to throw suspicion upon the authenticity and the good faith of the Biblical documents, serious weaknesses in this line of defence revealed themselves, of which the innovators were quick to take logical advantage. If the facts were doubtful, what became of the argument from correspondence with prophecy and from miracle? So began the long debate over the 'external' evidences of Christianity. It was a descent from the comparatively higher level of an inquiry into the fundamental truths of religion to undignified and often vituperative disputes over the veracity of the Apostles and the other NT writers. But, although the tendency to substitute this less important issue showed itself as early as the third decade of the century, it was not till some years later that the change became general.

Christianity as old as the Creation, or the Gospel a Republication of the Religion of Nature, was published in the year 1730. Its author, Matthew Tindal, Fellow of All Souls' College, Oxford, had passed through various changes of religious belief, and did not bring out this, his best-known work, till near the end of a long life. It was at once recognized as a noteworthy contribution to the controversy. It was sober and restrained in tone, and

on the whole was free from the personalities which disfigure so much of the contemporary literature. Tindal collected, arranged, and shaped with considerable skill the arguments on which the Deists relied, and presented their case in a compact intelligible form. His book marks the culmination of Deism, when the movement had reached the height of its development, and was not yet affected by the deterioration which soon afterwards set in. He did his work as well, perhaps, as it could be done. The inconsistencies, mistaken hypotheses, and historical impossibilities which find a place in his book belong to the system as such, and could not be removed without causing the collapse of the whole construction.

Tindal brought to its logical conclusion the process initiated by Toland and Collins. His professed purpose was the same as theirs had been—to lay down such plain and simple rules as should enable men of the meanest capacity to distinguish between religion and superstition. Like his predecessors, he repudiated mystery and mere deference to authority, and insisted on the duty of every man to fashion his own religious belief for himself. And, in order to show that it is actually possible for every man so to do, he maintained the thesis that the ultimate truth of religion is a common constituent in all creeds (apart from the influence of deterioration) and not the exclusive property of revelation. His argument may be very briefly summarized as follows:

The point of departure of Tindal's argument is found in a peculiar conception of the unchangeable nature of God, whence is drawn the inference that He will treat all men at all times alike in this important matter of supplying them with the same sufficient means of recognizing and discharging the duties required of them. Of course, a racial development of the faculty of conscience was an idea which was altogether beyond the reach of the 18th century Deist. It was therefore assumed that, from the first, man was in possession of a ready means of calculating the ultimate consequences of his actions and securing his future happiness. Only perversity could lead him astray, because God, 'that we may not fall to be as happy as possible for such creatures to be, has made our acting for our present, our only means of obtaining our future, happiness' (*Christianity as old, etc.*, p. 16). 'The reason of things or the relation they have to each other teaches us our duty in all cases whatever' (p. 19). Upon this primary revelation in and through the reason is constructed the edifice of natural religion. In making this point Tindal was able to avail himself of the opinions expressed by orthodox writers. Thus he quotes from Dr. Prideaux: 'Let what is written in all the books of the New Testament be tried by that which is the touchstone of all religions, I mean that religion of nature and reason which God has written in the hearts of every one of us from the first creation.' From such a statement it was not unfair to deduce the superiority of the truths of natural religion. Tindal, however, went beyond this and argued that any further revelation must of necessity be mere surplusage, adding nothing of importance to man's knowledge about either faith or morals. In his opinion, all laws, whether the laws of nations or of particular countries, are only the law of nature adapted and accommodated to circumstances: 'nor can religion, even in relation to the worship of God, as it is a reasonable service, be anything but what necessarily flows from the consideration of God and His creatures' (p. 63).

The religion of nature is represented as possessing a perfection so complete that revelation can add nothing to it, nor take anything from it. True religion, whether externally or internally revealed, must always be identically the same in its contents, and this identity will exhibit itself alike in doctrine and in precept. The ethical teaching of revelation cannot, in fact, be superior to that of nature, because no positive command can be considered obligatory unless the reason for it be perceived, in which case it is equally obligatory on the grounds of natural religion (cf. p. 70). Indeed, to suppose anything which is merely positive in the sense of being undemonstrable by reason to be a necessary ingredient of true religion, is inconsistent with the good of man and with the honour of God (p. 141).

The practical conclusion of the argument is presented in the following sentence: 'Nothing can be requisite to discover true Christianity and to preserve it in its native purity free from all superstition, but after a strict scrutiny to admit nothing to belong to it except what our reason tells us is worthy of having God for its author. And if it be evident that we can't discern whether any instituted religion contains everything worthy, and nothing unworthy, of a Divine original, except we can antecedently by our reason discern what is or is not worthy of having God for its author, it necessarily follows that natural and revealed religion can't differ, because what reason shows to be worthy of having God for its author must belong to natural

religion, and whatever reason tells us is unworthy of having God for its author can never belong to the true revealed religion' (p. 220). Into this single dilemma is compressed the quintessence of Deism.

At many points in the above argument it would have been possible to intervene, had it been in accordance with the design of this article to find particular answers to particular Deistic contentions. But no good purpose would be served by thus taking part in an obsolete controversy. It will, however, be useful now to point out some general weaknesses, which are not peculiar to Tindal, but are integral parts of the Deistic scheme of religious philosophy.

(a) In the first place, it will be noticed that every religious truth is measured against the standard of an imaginary Golden Age. Whatever truth Christianity possesses it retains from an original revelation to human reason, co-eval with the Creation. But in Deistic literature references of this kind to the beginning of the world must be interpreted in a conventional rather than in any literal sense. For, though the Deists professed to look to the far past, their eyes were, as a matter of fact, riveted on the present. It was the reason of their own day to which they appealed. Not until later was any attempt made to discover by historical methods of examination what the earlier intellectual and moral condition of the human race had actually been.

(b) Secondly, it is remarkable how, in estimating the value of the Christian religion, and distinguishing between its truths and its errors, the Deist maintains a consistent silence with regard to the Person of its Founder. He has practically nothing to say about the present operation of the influence of Christ in the world. And even stranger than his silence is his apparently complete unconsciousness that the omission of so fundamental a consideration might vitiate his results. So oblivious were the Deists, and many of their orthodox opponents likewise, of the mystical elements in Christianity, that the very conception of a personal union between the believer and Christ would have been forthwith dismissed as 'enthusiastic,' and to the reproach of enthusiasm the temper of the age was morbidly sensitive.

(c) Thirdly, a kind of supercilious superiority is assumed whenever the question of miracles arises. The Biblical records are not rejected on *a priori* grounds as in themselves impossible. Abstract metaphysical arguments have strangely little influence upon the course of the Deistic controversy. But, from the point of view of the Deist, miracles were beneath the notice of the man who claimed to be guided by his reason only. At best they might serve to arrest the attention of the vulgar herd. Religion being regarded as essentially the practice of duties, miracles were superfluous. For 'duties neither need, nor can receive, any stronger proof from miracles than what they have already from the evidence of right reason' (p. 374).

(d) Lastly, Tindal, like other Deists, exhibits an extraordinary incapacity to estimate fairly the strength of evil tendencies in human nature. It seemed to them as though all would be well if only some artificial obstacles in the way of moral progress could be removed. The adoption of the principle of Latitudinarianism—the universal recognition of sincerity as the one and only thing needful—would not only put an end to all persecution, but would set free an amount of moral energy sufficient to regenerate the world. In Tindal's own words, 'this principle, and this alone, would cause universal love and benevolence among the whole race of mankind; and, did it prevail, must soon produce a new and glorious face of things, or, in Scripture phrase, a new heaven and a new earth'

(p. 413). Verily, this was a flimsy optimism, out of all relation with the stern facts of the world's condition.

The time has now come to pass on to the consideration of the last stage of the controversy, when the pivot of the dispute had become the *question of prophecy and miracle*. It was the beginning of the end, and yet, when the current of controversy first turned into this channel, the public excitement rose to a higher pitch than it had hitherto reached. Nor is it difficult to discover the explanation of this immediate increase of interest. Up to this point the controversy, though not very profound, had yet concerned itself in some measure with the first principles of religious philosophy. In so doing it had moved in a region where the mind of the nation did not follow freely or with comfort. But now, in the place of these recondite and elusive questions concerning the adequacy or insufficiency of human reason, far plainer issues were raised that lay seemingly well within the compass of the ordinary understanding. Was the fulfilment of prophecy a fact or a delusion? Did the Resurrection of Christ really occur, or was it a fable easily explicable upon the supposition of enthusiasm or fraud on the part of the witnesses? Here were plain alternatives on which the book-writers and the pamphleteers could join issue. They hastened to avail themselves of the opportunity.

Notice has already been taken of the fact that Collins' book, *A Discourse of the Grounds and Reasons of the Christian Religion*, had contained criticism with regard to the commonly received views as to prophecy and miracle. Professing (though with doubtful sincerity) to write in the interests of Christianity, he sought to convict earlier apologists of a serious misrepresentation of the true relation between prophecy and fulfilment. The object of his attack was the detailed correspondence between the two; and he endeavoured to prove the impossibility of maintaining the old position, in the light of a sound historical criticism of the prophecies. Historically the predictions did not bear the meaning which the apologists required. If, then, the argument from correspondence were to be preserved, it could only be by giving to the prophecies in question a mystical and allegorical interpretation. Such, Collins argued, had in fact been the method of procedure adopted by the writers of the NT. In accordance with this general attitude towards the OT, he defined Christianity as a mystical Judaism. It was a plausible phrase, but not likely to commend Christianity to an age which regarded mysticism with a mixture of contempt and dislike.

This novel representation of the relation between Judaism and Christianity met with an unfavourable reception. For the most part it was vehemently repudiated by the defenders of orthodoxy. But, weak as Collins' arguments may have been, and easily riddled by the criticisms of better scholars than himself, it must be admitted that his attack on the traditional and mechanical conception of prophecy gave an impetus to a fruitful attempt at an investigation of the historical conditions out of which the writings of the OT took their rise. It was, in fact, an anticipation, however poorly equipped with linguistic and archaeological knowledge, of the Biblical criticism which has been rich in results during the last half century.

Naturally enough, the attempt to apply the allegorical method of interpretation was extended from prophecy to miracle. The best known name in connexion with this further development of the controversy is that of Woolston. It is strange that writings which should properly have been disregarded as the ravings of a disordered mind should have received the serious attention which was actually accorded them. If the author could be accounted responsible, then there would be no possible defence for the tone and manner of his *Discourses on the Miracles of our Saviour* (1727-29). He has recourse to suggestions and insinuations which are no less absurd than offensive to reverent ears. Every miracle, including that of the Resurrection, is explained away as the result of a mistake or conscious fraud. An utterly impossible attempt is made to prove by quotations from the early Christian Fathers that they were wholly regardless of positive historical facts, and found in the Gospels nothing but an emblematic representation of the mystical life of Christ in the souls of men. That Woolston was not wholly responsible for what he said, or for his manner of saying it, is the obvious excuse for the breaches of propriety of which he is guilty. In his own day, however, the excuse was not allowed. The law was set in motion against him, and he was sent to prison.

No particular theological merit belongs to the defences of the miraculous element in the Gospels which were called forth by the attacks of Woolston and others. Sherlock's *Trial of the Witnesses of the Resurrection of Jesus* (1729) is a characteristic specimen of the kind of answer which found favour at the time,

and was comfortably accepted as conclusive. An elaborate parody of legal forms is employed in order to give life to the argument. Unquestionably many good points are made, the value of the concurrent testimony of the Apostles is exhibited, and their unimpeachable character as witnesses vigorously upheld. But, while considerable technical skill is displayed, the vital warmth of a genuine spirituality has given place to a frigid cleverness.

At the stage now reached in our review of the history of Deism little vitality remained in the ideas which underlay the movement. A process of disintegration had set in. Deistic writers were no longer inspired by any genuine impetus of conviction, nor was the general public in a mood to give as much interested attention as heretofore. The controversy was perishing of inanition, and had almost collapsed through the operation of these internal causes. The end, however, was hastened by a damaging blow delivered from without by one who was equally out of sympathy with either side. Hume's philosophy, though it made little stir at the time, was in its effects fatal to the continuance of Deism. A movement which had been initiated under the influence of the ideas of Locke could not survive the transformation which Locke's philosophy underwent in the hands of Hume. This is a circumstance which gives confirmation to the view that the inner meaning of Deism is best understood in relation to the development of philosophical, rather than of religious, ideas. It was because Deism had arisen through the application of Locke's philosophy to the subject-matter of religion that its position ceased to be tenable, so soon as that philosophy was found to issue in general scepticism. A little examination of the nature of Hume's criticism of religious belief will show how completely he cut away the foundations on which the Deists had built.

The Deists, as we have seen, had begun by defending the pre-eminence of Christianity on the ground that it and it alone corresponded with the true religion of nature; but, gradually becoming more conscious of their divergence from historic Christianity, they transformed themselves into the champions of natural, as opposed to revealed, religion. And natural religion meant for them that religion which any man at any time from the beginning of the world was capable of discovering for himself through the exercise of his own individual reason. The existence of a religion 'as old as the Creation' was their fundamental assumption. It was precisely this assumption which collapsed as soon as it was criticized in the light of Locke's own principles concerning the gradual acquisition of knowledge. Hume pointed out that the religion of primitive man, so far from consisting of a few pure, elevated, and incontrovertible truths, must have been a medley of crude beliefs and puerile superstitions. 'It seems certain that, according to the natural progress of human thought, the ignorant multitude must first entertain some grovelling and familiar notion of superior powers before they stretch their conception to that perfect being who bestowed order on the whole frame of nature' (*Works*, iv. 421).

Along these lines Hume developed his *Natural History of Religion* (1757). He exhibited the rude beginnings of religious belief in a barbarous type of polytheism, and sought to provide an explanation of the mode in which purely natural influences, as distinct from supernatural revelation, transformed this primitive faith into something less crude and less full of patent absurdities. Such explanations afford convenient cover for the insinuation that the final product possesses no real superiority over the rude beginnings, being equally human in origin, insecure in its foundations, and destitute of all reasonable proof.

Hume's irony serves as a very thin disguise for his real sentiments. The declaration of belief in the existence of God, with which he opens his dissertation, is couched in language that would be appropriate in any Deistic treatise; but its insincerity is obvious. With the manifest purpose of undermining the common belief in God, he attributes its prevalence to the operation of irrational causes. 'The doctrine of one supreme Deity, the author of nature, is very ancient, has spread itself over great and populous nations, and among them has been embraced by all ranks and conditions of men; but whoever thinks that it has owed its success to the prevalent force of those invincible reasons on which it is undoubtedly founded, would show himself little acquainted with the ignorance and stupidity of the people, and their prejudice in favour of their particular superstitions' (iv. 446). At the conclusion of the treatise, discarding even this slight veil of sarcasm, and declaring the whole question to be a riddle, an enigma, an inexplicable mystery, he advocates an escape from the contentions of discordant superstitions into the calm regions of philosophy. In this way Hume makes short work of the pure original religion by which the Deists set such store. Not only had he the best of the argument

on the whole was free from the personalities which disfigure so much of the contemporary literature. Tindal collected, arranged, and shaped with considerable skill the arguments on which the Deists relied, and presented their case in a compact intelligible form. His book marks the culmination of Deism, when the movement had reached the height of its development, and was not yet affected by the deterioration which soon afterwards set in. He did his work as well, perhaps, as it could be done. The inconsistencies, mistaken hypotheses, and historical impossibilities which find a place in his book belong to the system as such, and could not be removed without causing the collapse of the whole construction.

Tindal brought to its logical conclusion the process initiated by Toland and Collins. His professed purpose was the same as theirs had been—to lay down such plain and simple rules as should enable men of the meanest capacity to distinguish between religion and superstition. Like his predecessors, he repudiated mystery and mere deference to authority, and insisted on the duty of every man to fashion his own religious belief for himself. And, in order to show that it is actually possible for every man so to do, he maintained the thesis that the ultimate truth of religion is a common constituent in all creeds (apart from the influence of deterioration) and not the exclusive property of revelation. His argument may be very briefly summarized as follows:

The point of departure of Tindal's argument is found in a peculiar conception of the unchangeable nature of God, whence is drawn the inference that He will treat all men at all times alike in this important matter of supplying them with the same sufficient means of recognizing and discharging the duties required of them. Of course, a racial development of the faculty of conscience was an idea which was altogether beyond the reach of the 18th century Deist. It was therefore assumed that, from the first, man was in possession of a ready means of calculating the ultimate consequences of his actions and securing his future happiness. Only perversity could lead him astray, because God, 'that we may not fall to be as happy as possible for such creatures to be, has made our acting for our present, our only means of obtaining our future, happiness' (*Christianity as old, etc.*, p. 16). 'The reason of things or the relation they have to each other teaches us our duty in all cases whatever' (p. 19). Upon this primary revelation in and through the reason is constructed the edifice of natural religion. In making this point Tindal was able to avail himself of the opinions expressed by orthodox writers. Thus he quotes from Dr. Prideaux: 'Let what is written in all the books of the New Testament be tried by that which is the touchstone of all religions, I mean that religion of nature and reason which God has written in the hearts of every one of us from the first creation.' From such a statement it was not unfair to deduce the superiority of the truths of natural religion. Tindal, however, went beyond this and argued that any further revelation must of necessity be mere surplusage, adding nothing of importance to man's knowledge about either faith or morals. In his opinion, all laws, whether the laws of nations or of particular countries, are only the law of nature adapted and accommodated to circumstances: 'nor can religion, even in relation to the worship of God, as it is a reasonable service, be anything but what necessarily flows from the consideration of God and His creatures' (p. 63).

The religion of nature is represented as possessing a perfection so complete that revelation can add nothing to it, nor take anything from it. True religion, whether externally or internally revealed, must always be identically the same in its contents, and this identity will exhibit itself alike in doctrine and in precept. The ethical teaching of revelation cannot, in fact, be superior to that of nature, because no positive command can be considered obligatory unless the reason for it be perceived, in which case it is equally obligatory on the grounds of natural religion (cf. p. 70). Indeed, to suppose anything which is merely positive in the sense of being undemonstrable by reason to be a necessary ingredient of true religion, is inconsistent with the good of man and with the honour of God (p. 141).

The practical conclusion of the argument is presented in the following sentence: 'Nothing can be requisite to discover true Christianity and to preserve it in its native purity free from all superstition, but after a strict scrutiny to admit nothing to belong to it except what our reason tells us is worthy of having God for its author. And if it be evident that we can't discern whether any instituted religion contains everything worthy, and nothing unworthy, of a Divine original, except we can antecedently by our reason discern what is or is not worthy of having God for its author, it necessarily follows that natural and revealed religion can't differ, because what reason shows to be worthy of having God for its author must belong to natural

religion, and whatever reason tells us is unworthy of having God for its author can never belong to the true revealed religion' (p. 220). Into this single dilemma is compressed the quintessence of Deism.

At many points in the above argument it would have been possible to intervene, had it been in accordance with the design of this article to find particular answers to particular Deistic contentions. But no good purpose would be served by thus taking part in an obsolete controversy. It will, however, be useful now to point out some general weaknesses, which are not peculiar to Tindal, but are integral parts of the Deistic scheme of religious philosophy.

(a) In the first place, it will be noticed that every religious truth is measured against the standard of an imaginary Golden Age. Whatever truth Christianity possesses it retains from an original revelation to human reason, co-eval with the Creation. But in Deistic literature references of this kind to the beginning of the world must be interpreted in a conventional rather than in any literal sense. For, though the Deists professed to look to the far past, their eyes were, as a matter of fact, riveted on the present. It was the reason of their own day to which they appealed. Not until later was any attempt made to discover by historical methods of examination what the earlier intellectual and moral condition of the human race had actually been.

(b) Secondly, it is remarkable how, in estimating the value of the Christian religion, and distinguishing between its truths and its errors, the Deist maintains a consistent silence with regard to the Person of its Founder. He has practically nothing to say about the present operation of the influence of Christ in the world. And even stranger than his silence is his apparently complete unconsciousness that the omission of so fundamental a consideration might vitiate his results. So oblivious were the Deists, and many of their orthodox opponents likewise, of the mystical elements in Christianity, that the very conception of a personal union between the believer and Christ would have been forthwith dismissed as 'enthusiastic,' and to the reproach of enthusiasm the temper of the age was morbidly sensitive.

(c) Thirdly, a kind of supercilious superiority is assumed whenever the question of miracles arises. The Biblical records are not rejected on *a priori* grounds as in themselves impossible. Abstract metaphysical arguments have strangely little influence upon the course of the Deistic controversy. But, from the point of view of the Deist, miracles were beneath the notice of the man who claimed to be guided by his reason only. At best they might serve to arrest the attention of the vulgar herd. Religion being regarded as essentially the practice of duties, miracles were superfluous. For 'duties neither need, nor can receive, any stronger proof from miracles than what they have already from the evidence of right reason' (p. 374).

(d) Lastly, Tindal, like other Deists, exhibits an extraordinary incapacity to estimate fairly the strength of evil tendencies in human nature. It seemed to them as though all would be well if only some artificial obstacles in the way of moral progress could be removed. The adoption of the principle of Latitudinarianism—the universal recognition of sincerity as the one and only thing needful—would not only put an end to all persecution, but would set free an amount of moral energy sufficient to regenerate the world. In Tindal's own words, 'this principle, and this alone, would cause universal love and benevolence among the whole race of mankind; and, did it prevail, must soon produce a new and glorious face of things, or, in Scripture phrase, a new heaven and a new earth'

(p. 413). Verily, this was a flimsy optimism, out of all relation with the stern facts of the world's condition.

The time has now come to pass on to the consideration of the last stage of the controversy, when the pivot of the dispute had become the *question of prophecy and miracle*. It was the beginning of the end, and yet, when the current of controversy first turned into this channel, the public excitement rose to a higher pitch than it had hitherto reached. Nor is it difficult to discover the explanation of this immediate increase of interest. Up to this point the controversy, though not very profound, had yet concerned itself in some measure with the first principles of religious philosophy. In so doing it had moved in a region where the mind of the nation did not follow freely or with comfort. But now, in the place of these recondite and elusive questions concerning the adequacy or insufficiency of human reason, far plainer issues were raised that lay seemingly well within the compass of the ordinary understanding. Was the fulfilment of prophecy a fact or a delusion? Did the Resurrection of Christ really occur, or was it a fable easily explicable upon the supposition of enthusiasm or fraud on the part of the witnesses? Here were plain alternatives on which the book-writers and the pamphleteers could join issue. They hastened to avail themselves of the opportunity.

Notice has already been taken of the fact that Collins' book, *A Discourse of the Grounds and Reasons of the Christian Religion*, had contained criticism with regard to the commonly received views as to prophecy and miracle. Professing (though with doubtful sincerity) to write in the interests of Christianity, he sought to convict earlier apologists of a serious misrepresentation of the true relation between prophecy and fulfilment. The object of his attack was the detailed correspondence between the two; and he endeavoured to prove the impossibility of maintaining the old position, in the light of a sound historical criticism of the prophecies. Historically the predictions did not bear the meaning which the apologists required. If, then, the argument from correspondence were to be preserved, it could only be by giving to the prophecies in question a mystical and allegorical interpretation. Such, Collins argued, had in fact been the method of procedure adopted by the writers of the NT. In accordance with this general attitude towards the OT, he defined Christianity as a mystical Judaism. It was a plausible phrase, but not likely to commend Christianity to an age which regarded mysticism with a mixture of contempt and dislike.

This novel representation of the relation between Judaism and Christianity met with an unfavourable reception. For the most part it was vehemently repudiated by the defenders of orthodoxy. But, weak as Collins' arguments may have been, and easily riddled by the criticisms of better scholars than himself, it must be admitted that his attack on the traditional and mechanical conception of prophecy gave an impetus to a fruitful attempt at an investigation of the historical conditions out of which the writings of the OT took their rise. It was, in fact, an anticipation, however poorly equipped with linguistic and archaeological knowledge, of the Biblical criticism which has been rich in results during the last half century.

Naturally enough, the attempt to apply the allegorical method of interpretation was extended from prophecy to miracle. The best known name in connexion with this further development of the controversy is that of Woolston. It is strange that writings which should properly have been disregarded as the ravings of a disordered mind should have received the serious attention which was actually accorded them. If the author could be accounted responsible, then there would be no possible defence for the tone and manner of his *Discourses on the Miracles of our Saviour* (1727-29). He has recourse to suggestions and insinuations which are no less absurd than offensive to reverent ears. Every miracle, including that of the Resurrection, is explained away as the result of a mistake or conscious fraud. An utterly impossible attempt is made to prove by quotations from the early Christian Fathers that they were wholly regardless of positive historical facts, and found in the Gospels nothing but an emblematic representation of the mystical life of Christ in the souls of men. That Woolston was not wholly responsible for what he said, or for his manner of saying it, is the obvious excuse for the breaches of propriety of which he is guilty. In his own day, however, the excuse was not allowed. The law was set in motion against him, and he was sent to prison.

No particular theological merit belongs to the defences of the miraculous element in the Gospels which were called forth by the attacks of Woolston and others. Sherlock's *Trial of the Witnesses of the Resurrection of Jesus* (1729) is a characteristic specimen of the kind of answer which found favour at the time,

and was comfortably accepted as conclusive. An elaborate parody of legal forms is employed in order to give life to the argument. Unquestionably many good points are made, the value of the concurrent testimony of the Apostles is exhibited, and their unimpeachable character as witnesses vigorously upheld. But, while considerable technical skill is displayed, the vital warmth of a genuine spirituality has given place to a frigid cleverness.

At the stage now reached in our review of the history of Deism little vitality remained in the ideas which underlay the movement. A process of disintegration had set in. Deistic writers were no longer inspired by any genuine impetus of conviction, nor was the general public in a mood to give as much interested attention as heretofore. The controversy was perishing of inanition, and had almost collapsed through the operation of these internal causes. The end, however, was hastened by a damaging blow delivered from without by one who was equally out of sympathy with either side. Hume's philosophy, though it made little stir at the time, was in its effects fatal to the continuance of Deism. A movement which had been initiated under the influence of the ideas of Locke could not survive the transformation which Locke's philosophy underwent in the hands of Hume. This is a circumstance which gives confirmation to the view that the inner meaning of Deism is best understood in relation to the development of philosophical, rather than of religious, ideas. It was because Deism had arisen through the application of Locke's philosophy to the subject-matter of religion that its position ceased to be tenable, so soon as that philosophy was found to issue in general scepticism. A little examination of the nature of Hume's criticism of religious belief will show how completely he cut away the foundations on which the Deists had built.

The Deists, as we have seen, had begun by defending the pre-eminence of Christianity on the ground that it and it alone corresponded with the true religion of nature; but, gradually becoming more conscious of their divergence from historic Christianity, they transformed themselves into the champions of natural, as opposed to revealed, religion. And natural religion meant for them that religion which any man at any time from the beginning of the world was capable of discovering for himself through the exercise of his own individual reason. The existence of a religion 'as old as the Creation' was their fundamental assumption. It was precisely this assumption which collapsed as soon as it was criticized in the light of Locke's own principles concerning the gradual acquisition of knowledge. Hume pointed out that the religion of primitive man, so far from consisting of a few pure, elevated, and incontrovertible truths, must have been a medley of crude beliefs and puerile superstitions. 'It seems certain that, according to the natural progress of human thought, the ignorant multitude must first entertain some grovelling and familiar notion of superior powers before they stretch their conception to that perfect being who bestowed order on the whole frame of nature' (*Works*, iv. 421).

Along these lines Hume developed his *Natural History of Religion* (1757). He exhibited the rude beginnings of religious belief in a barbarous type of polytheism, and sought to provide an explanation of the mode in which purely natural influences, as distinct from supernatural revelation, transformed this primitive faith into something less crude and less full of patent absurdities. Such explanations afford convenient cover for the insinuation that the final product possesses no real superiority over the rude beginnings, being equally human in origin, insecure in its foundations, and destitute of all reasonable proof.

Hume's irony serves as a very thin disguise for his real sentiments. The declaration of belief in the existence of God, with which he opens his dissertation, is couched in language that would be appropriate in any Deistic treatise; but its insincerity is obvious. With the manifest purpose of undermining the common belief in God, he attributes its prevalence to the operation of irrational causes. 'The doctrine of one supreme Deity, the author of nature, is very ancient, has spread itself over great and populous nations, and among them has been embraced by all ranks and conditions of men; but whoever thinks that it has owed its success to the prevalent force of those invincible reasons on which it is undoubtedly founded, would show himself little acquainted with the ignorance and stupidity of the people, and their prejudice in favour of their particular superstitions' (iv. 446). At the conclusion of the treatise, discarding even this slight veil of sarcasm, and declaring the whole question to be a riddle, an enigma, an inexplicable mystery, he advocates an escape from the contentions of discordant superstitions into the calm regions of philosophy. In this way Hume makes short work of the pure original religion by which the Deists set such store. Not only had he the best of the argument

in contending for the probability of progress from crude to refined types of religion, but, in the face of the evidence which it was easy for him to produce with regard to the condition of religion in earlier times and among the uncivilized nations of the world, it was impossible for the fiction of a religion as old as the Creation to maintain itself.

In passing it should be noticed that the strength and the weakness of Hume's essay on 'Miracles' can be properly appreciated only when it is remembered that, throughout the Deistic controversy, miracle was treated as the chief evidence of the Divine authorship of a revelation. From this point of view, the more startling the event the greater will be the stupor which it produces, and the higher its value as a credential. Unconscious of the dangers to faith involved in their procedure, the apologists degraded miracle to the level of portent. It was a blunder of which Hume was quick to take advantage. If Deist and apologist alike were willing to treat miracle as a naked sign of arbitrary power, it was not for the common enemy of Deism and Christianity to set them right. He was only taking up the ordinary position of the time when he defined miracle as a violation of nature; and, when it is so regarded, with every adequate cause for its occurrence eliminated from consideration, it is undeniably plausible to contend that no amount of external evidence can outweigh the inherent improbability.

3. Writers with relations to Deism, but not properly Deists.—Some writers, commonly reckoned among the Deists, have been intentionally passed over in silence. It will be well, therefore, to add a few words of explanation why this course has been adopted. During the period under review, while the Deists were the most forward and active antagonists of orthodoxy, it was not unnatural that any writer who maintained unorthodox opinions should be reckoned as belonging to their camp. Yet obviously the classification is likely in some places to be inexact. It was so, for example, in the case of Lord Shaftesbury, the author of *Characteristics* (1711). It is no doubt true that there are certain points which he and the Deists have in common, but the superficial resemblances are more than counterbalanced by fundamental differences. He displays the same antipathy to priests, and employs the same kind of invective against the poisonous influence of superstition; but, while he thus directs his attack upon the same objective, the principles on which he bases his criticisms are very far from being those of the Deists. Their characteristic conception of a law of nature imposed upon His creatures by the Creator, and enforced by means of rewards and punishments, is absolutely alien from his system of thought. For him the ethical standard was determined by the dictates of an intuitive moral faculty, forming part of the essential endowment of human nature. Of this moral faculty the effectiveness would indeed be reinforced by theistic belief, but is not dependent on it, whereas in the Deistic system the sense of moral obligation is derived from the recognition by man of his relation to his Maker.

Since the existence of God was of comparatively little moment in Lord Shaftesbury's system, he cannot properly be styled a Deist; and in some ways he exhibited a positive antagonism to their mode of thought. For example, he raised a much needed protest against the undue prominence given to hedonistic considerations by both parties in the controversy. He found an appropriate object for his wit in exposing the shallowness of the conception by which ethics was degraded into an elaborate calculation of pains and pleasures. The pointed weapon of ridicule is effectively used in his hands. Unfortunately, in his references to religion his satire frequently degenerates into a sneer. The defenders of religion winced under his sarcasms, and retaliated by calling him a Deist. But there was little justification for the charge. The word 'Deism' would cease to have any definite connotation if it were made to cover systems so radically divergent as those of Shaftesbury and Tindal.

If there is little justification for ranking Shaftesbury among the Deists, there is even less for assigning a writer like Mandeville to their company. The Deist may not have been remarkable for any particular moral excellence, but at least he was eminently respectable. There is no reason to question the sincerity of his desire to further the cause of morality, and to lend his aid in raising a barrier against the encroaching tide of moral laxity. Such was not the purpose of Mandeville. He is cynical enough to set out on the title-page

of the *Fable of the Bees* (1714) the thesis that private vices are public benefits, and in his opening inquiry into the nature of moral virtue adopts the conclusion that it is the political offspring which Flattery has begot upon Pride. Intrinsically the book is as worthless as it is paradoxical, but it raised a laugh, and its sophistical arguments in favour of self-indulgence ensured its popularity in circles where every moral restraint was regarded with contemptuous indifference.

Leland, the contemporary historian and critic of Deism, devotes as much as a third of his work on the Deistical writers to a consideration of the works of Lord Bolingbroke. It is a clear indication of the high importance which was at the time attached to this attack on the claims of revelation. When Leland wrote, Bolingbroke's collected writings (with Life by D. Mallet), of which the one here most relevant is his *Letters on the Study and Use of History* (written in 1738), were newly published, having been issued posthumously in the year 1754. The effect of the book, however, was almost nil, and Dr. Johnson's sentence, in which he contemptuously described it as a blunderbuss which the author had not resolution enough to fire off in his lifetime, is a more accurate appraisal of it than Leland's elaborate criticism. The old sneers at priestcraft, the old arguments in favour of a purely rational religion, re-appear. But there was no new point to make; and Deism was too far gone in decay to be revived even by Lord Bolingbroke's name and his 'five pompous volumes.' In England, Deism was to all intents and purposes defunct, though about this time a kindred movement on the other side of the Channel was exhibiting fresh vitality under new forms.

4. The foreign movement.—Deism such as we have been describing was so native a product of English thought, with a form so markedly determined alike by the strength and the weakness of the English mind, that its transplantation to a foreign soil could not be accomplished without the most profound modification of its character. When the ideas to which the English Deists had first given expression were taken up by French exponents, new elements were introduced which gave to the resultant product a very different quality. Thus, what had been Deism in England became in France another movement, with a character and history of its own, which cannot properly be handled in this article. At the same time the history of Deism is not complete unless account be taken of the fact that it is the parent stock from which sprang the French movement of reaction against traditional belief.

It is significant that both Voltaire (†1778) and Rousseau were largely indebted to English sources for their inspiration. During the years which the former passed in England (1726–1729), he gathered impressions which he afterwards systematized and elaborated into a philosophy of religion. As a friend of Lord Bolingbroke he naturally came into close contact with men who, whether secretly or openly, sympathized with the Deists. The ideas which he derived from this intercourse were in keeping with the bent of his mind. Moreover, his peculiar abilities enabled him to give them a keener edge and a wider range than they had possessed in the hands of the English writers. In France the conceptions characteristic of Deism found a soil more favourable to their rapid development than England had ever afforded them. The logical French mind, impatient of compromise and qualification, insisted rigidly on the necessary consequences of abstract principles, where English conclusions had been influenced by numberless practical considerations. And, further, the con-

ditions of social, political, and ecclesiastical life in France were such as to accentuate the criticisms of those who were opposed in spirit to the prevailing order. Resentment against repression manifested itself in a sharper opposition to the unbending attitude of authority. In proportion as an external submission to rule was enforced, so was an internal passion for revolt stimulated, especially in the domain of religious thought. So marked was the opposition between the old and the new points of view, that Deism became almost at once identified with an anti-ecclesiastical movement. Instead of aiming at a transformation of the old theology into another pattern, as had been the object of the earlier English Deists, the French representatives of the movement advocated a general repudiation of theology and the substitution of an undogmatic religion in place of Roman Catholicism. To this end Voltaire applied the weapons of his caustic satire, and the Encyclopædists added the weight of their accumulated knowledge. Indeed, Diderot († 1784) and his school represent a further stage in the downward transition from Deism towards Materialism. With him even that residue of natural religion which Voltaire would have retained became a mere superfluity, resting on no secure foundation of reason, and therefore destined to disappear before the advance of intellectual enlightenment. See art. ENCYCLOPÆDISTS.

This tendency to a bare Materialism was to some extent checked by the influence of Rousseau († 1778), who was at once the product and the champion of a reaction against the stiffness and coldness of a cramped Rationalism. In the fact that he thus represented the protest of common sense against the bare negations of Materialism is to be found the explanation of his wide popularity. But the effect which he produced must not be overestimated. Whatever may have been the result of his political speculations in hastening the crisis of the Revolution, his influence upon religious thought was not more than evanescent. Though his genius galvanized for a time into fresh activity some of those ideas which had been the stock-in-trade of the Deistic writers, he could not restore to them the real vigour of life. Deism had had its day. The intellectual opposition to the supernatural element in Christianity was about to assume another form. A new criticism and a new apologetic were destined to arise, constructed upon lines determined by the new metaphysical theories of Kant.

5. Permanent results.—Controversies upon which the attention of thinking men has been focused can neither pass away without leaving some definite mark on subsequent theology, nor be appraised at their proper value unless the character and extent of their permanent results be taken into account. It will therefore be necessary to ask what lasting contribution was made by Deism to English theological thought. It is almost a matter of surprise to find on examination how comparatively scanty is the residuum which has stood the test of time. But something no doubt has survived. To some extent the Deists were successful in establishing their principle of the appeal to human reason, even while in their own application of it they showed little skill or power of discrimination. It is noteworthy that they called in, as arbiter of the dispute, the common sense of the ordinary man, and, as witness, the trained skill of the expert. Obviously, the critical questions which were raised could not be settled without thorough investigation by men who had devoted years of study to the data of these problems. A new class of Bible students arose who professed to approach their tasks with minds entirely unbiased by any dogmatic considerations. Whether

they were as free from prejudice as they themselves supposed, is open to question. At any rate the Deists gave an impulse to Biblical criticism, the benefit of which still makes itself felt. It has not been forgotten that the same methods of scientific inquiry must be applied to sacred as to profane history. What has now become a commonplace of theology was first insisted upon by the Deists. That they should have led the way in this direction is so much to their credit.

Again, the appeal to the common sense of those who make no claim to any professional knowledge of theology has remained markedly characteristic of English religion. The religious public, as it is called, is disinclined to divest itself of responsibility by seeking shelter behind the pronouncements of authority. Conscious of inability itself to undertake in detail the processes of criticism, it insists on seeing the results openly displayed. The debate between the champions of tradition and of innovation is not carried on behind closed doors, but in open court. The public desire to follow the argument and form for themselves an intelligent estimate of the issue. This feature also of our religious life is in great measure the outcome of the Deistic movement.

The Deistic controversy left no more important legacy behind it than the apologetic method of Bp. Butler († 1752). The *Analogy* (1736) may always be read with profit, but its true greatness cannot be rightly appreciated unless the argument be viewed in its proper setting as an answer to the Deistic attack on Christianity. What calls for remark is Butler's careful and guarded exposition of the principles of religious evidence in opposition to the exaggerated insistence by the Deists on certain aspects of the truth and their corresponding neglect of other equally important considerations. It is most interesting to observe how free he is from any undue bias against his opponents' point of view, how far he is ready to go with them, and how sincerely, unhesitatingly, and fearlessly he recognizes the validity of their appeal to reason, while brushing aside their pretentious claim to be the only 'Free-thinkers.' It is just because he is thus frank in his acknowledgment of the ultimate authority of human reason that he is able to insist with effect on the limitations imposed by ignorance, inseparable from our finite condition. He did an inestimable service to religion when he exposed with relentless logic the absurdity of the claim that all things in revelation should be made transparently intelligible to the human mind. It was another service of scarcely less value when he made men realize that revelation consisted *ex hypothesi* of a scheme composed of a large number of inter-related parts, not one of which can be legitimately criticized except in its full context. These were precisely the considerations which the Deists overlooked. If they have now become the truisms of theology, it is because Butler first expounded them as the necessary corrective to the crude speculations of Deism. See, farther, art. BUTLER.

An allied but distinguishable reaction against the temper of Deism reveals itself in the idealistic philosophy of Bp. Berkeley († 1753), who, like his contemporary Butler, was moved to indignation at the unintelligent superficiality of the prevalent unbelief. To him it appeared that the decay of faith was in the main due to the general acceptance of a faulty metaphysic, inherited from Locke. The Christian verities were rejected on the plea that they did not approve themselves to the philosophic intellect. But the philosophers were themselves responsible for creating unnecessary intellectual difficulties. It was they who had raised the dust, through which, as they complained, they could not see. Berkeley directed his

criticism against the half-developed Materialism which was the orthodox metaphysic of the day. His rejection of Locke's conception of the real existence of extended matter was accounted paradoxical, and on that account chiefly attracted attention both favourable and unfavourable. But it is sometimes forgotten that this Immaterialism of Berkeley was only part of his system. It was the foundation on which he built. It led on to his conception of the world as the perpetual manifestation of the spiritual presence of God. Thus he delivered a powerful protest against the view that the evidence for the existence of God can be disclosed only through a long and intricate process of inference. In opposition to the commonly accepted cold mechanical outlook on the universe, he preached the doctrine of a continuous communication between the Divine and the human spirit through the medium of sensible experience. To him the material world was the language of God addressed to the spiritual ear, and charged with an infinite significance for those who would address themselves to the task of its interpretation. It was too high a conception to commend itself to the temper of the 18th century. Nevertheless, the impulse towards a religious idealism which Berkeley initiated has not been altogether without effect. His teaching, which originated in opposition to Deism, has remained to this day part of our theological heritage. See, further, art. BERKELEY.

The religious protest against Deism which found expression in the writings of Butler and Berkeley was carried further by Law and Wesley, but with a characteristic difference. The two bishops had met the Deists on the field of intellectual reasoning. This was not the method which commended itself to the judgment of the mystic and of the revivalist. They appealed from the intellect to the verdict of the religious consciousness. Perhaps the statement should be made with some qualification with respect to Law, since in the treatise which he composed against Tindal his mysticism does not yet appear.

In the *Case of Reason* (1731), Law appealed without scruple to the logic of intellect; moreover, he possessed the power of marshalling his arguments with skill and clothing them in apt language. Before the inscrutable mystery of the Infinite he prostrated himself in silent submission, and with a feeling of profound reverence yielded a willing obedience to the message of revelation. It is strange to find Law at this time referring to miracles as the proof of revelation. A little later he discovered a method of statement more congenial to his natural temperament. In the place of controversial argument he substituted the positive affirmations of the mystic's experience. In opposition to Tindal he had taken a low view of the range of human reason, and this position he consistently maintained, but in the writings of the mystics he found it stated that man possessed a faculty of spiritual intuition incomparably more efficacious than reason in the attainment of Divine wisdom. In Christian mysticism, Law discovered a system which afforded satisfaction to his religious instincts; and he strove to influence others in the same direction, by means of writings which are a strange compound of deep spiritual insight and fanciful imaginations. But in the 18th cent. the message of the mystic was *vox clamantis in deserto*. The seed fell on barren ground, where it had no opportunity of germinating.

Law founded no school of English mysticism. Though there were many who, like himself, recoiled from the irreligiosity of Deism, there were few ready to follow whither he led the way. He was before his time, and has perhaps more disciples at the present day than he had in his own lifetime.

The same recoil from Deism, but under yet another aspect, is illustrated by the life and work of John Wesley († 1791). Profoundly influenced by Law's example and ethical teaching, he differed widely from him in temperament, and was alike ignorant and impatient of the mystical tendencies to which the older man resigned himself. Emphatically a man of action, he gave expression to the protest of the practical religious consciousness against the religious impotence of Rationalism. It mattered little whether the Rationalism was of

the type preached by Tillotson or of that preached by Tindal. In either case it had proved miserably ineffective in stemming the tide of infidelity and immorality. Wesley came forward at the precise moment when there was a wide-spread and despairing consciousness of the utter sterility of mere argument about religion. Boldly discarding the discredited appeal to the intellect, he addressed himself to the ineradicable religious instincts of mankind, their sense of sin, their longing for forgiveness, the hopeless unrest of the soul to which no vision of God has come. In pressing home his appeal he touched the hearts of multitudes by means of those very Christian doctrines which the Deists had found too irrational for acceptance, and had made the butt of their shallow satire. The fall of man, the fact and the malignant influence of original sin, the offer of redemption, the mystery of the Atonement—these were the topics handled by the preacher round whom the crowds gathered in their thousands. There could not have been a more complete repudiation of the whole temper of which Deism was the expression. The stale arguments were allowed to drop into oblivion. There was a return to older methods of less intellectual pretensions. The proof of religion was sought no longer in the appeal to natural reason, but in the letter of Scripture and in the experience of daily life.

Thus the rise of Wesleyanism coincided with the extinction of Deism. Not that Deism disappeared because the problems which it had raised had received final and conclusive answers. On the contrary, many of these problems involve mysteries which, it is probable, will always remain inscrutable to the finite mind. It is no discredit to the apologists of the 18th cent. that in such cases they had no solution to offer. They had done all that could be expected of them. They had shown the alternative creed of the Deist to be weighted with difficulties as great as those which he hoped to escape by his rejection of Christianity. They had pointed to a way of reconciliation between the rights of reason and the claims of faith. It was not until this work had been accomplished that the Evangelical Revival could exhibit the undiminished spiritual energy latent in authoritative and traditional religion. Then began another stage of religious history, a period even more distracted with controversy than that which we have been passing in review. But the struggle was over new issues. Deism was forgotten.

II. *PHILOSOPHICAL*.—1. View of God's relation to the material and the moral world.—The word 'Deism,' besides serving as the designation of an historical religious movement, has been commonly used to describe a particular view of God's nature and of the dependence of the world upon Him. Between the two uses of the word a connexion exists, of which some notice will presently be taken, but it would be a mistake to suppose that philosophic Deism was necessarily the accepted creed of the Deists of the 18th century. Indeed, some who bore the name would at the present day be called Theists. But the distinction now made between Deism and Theism did not then exist. The two expressions were used indiscriminately. It is only in later times, since the study of the philosophy of religion has been prosecuted with greater attention, that to the word 'Deism' has been attached a more defined and exact connotation. We proceed to ask, What is the meaning conveyed by the word in this later and more abstract sense?

The great question concerning the relation of God to the world has received a vast number of different answers. To classify into distinct groups the various solutions proposed is no easy matter. It is difficult to draw lines of division, when the

gradations are almost imperceptible, though at the two extremities members of the same series may stand in conspicuous opposition to one another. But, since some form of classification is necessary, it has been found convenient to separate views as to the being of God into two divisions, according as they approximate to Pantheism on the one hand or to Deism on the other. With the second only are we here concerned. Let it be borne in mind that our subject of study is not a definite school of thought sharply outlined and admitting historical treatment. It is rather a vague inclination or bent of mind, which in varying degrees is continuously present in human thought, and occasionally, coming prominently to the front, becomes the dominant factor in religious and philosophic systems.

Deism approaches the ultimate problem of the universe with a self-satisfied confidence painfully out of proportion to the difficulty of the task of finding a solution. With little sense of reverence for the mystery that lies behind all outward appearances, it accepts an answer suggested by anthropomorphic analogies, and framed in accordance with uncritical prepossessions. Common sense admits no obstinate questionings as to the independent existence of the external world, nor does it care to inquire too curiously what may be the real character of human freedom. It rests content with the common assumptions of daily life. The Deist, adopting these assumptions as his starting-point, finds comparatively little difficulty in constructing his theory of God and the world. He is ready to acknowledge a Creator. In order to account for the existence of the material world, it is necessary to assume the existence of a First Cause, at whose command creation took effect and the cosmos entered on its life. But the Deist's conception of creation is essentially restricted. The fabric of the universe is supposed to stand to God in the relation which the instrument bears to its maker. The heavens are the work of His hands, just as the watch is the work of the watchmaker. As the craftsman determines the characteristic properties of his machine, the correlation of its parts, their positions and their functions, so is God conceived to have dealt with the world. He brought it into being and ordained its laws. He imparted to it once for all the energy which serves as the driving power of the stupendous mechanism. The Deist recognizes in God the ultimate source of matter and motion, and, consistently with this conception, admits the possibility of occasional interferences on the part of the Deity. But, though the possibility of such interference is granted, the probability is called in question. It seems more in accordance with the principles of Deism that Nature should be left to work itself out in obedience to laws originally given. Any suggestion of a deviation from the established order is resented, as though to admit it were to be wanting in due respect for the inviolable majesty of God's unchangeableness and the original perfection of His work. A perfect machine, it is supposed, would not require from time to time to be adjusted by its maker; nor would the Unchangeable introduce any later corrections into a creation which from the first reflected His omniscience and omnipotence.

Similarly based on anthropomorphic analogies, and subject in consequence to similar defects, is the Deistic conception of the relation of God to the moral world. He is the supreme Governor, the author of moral as of physical law, but as remote in the one region as in the other from the particular cases exhibiting the working of His laws. He is thought of as filling the part of legislator and judge to the universe of moral beings; and these analogies, derived from the organization of

human society, are treated as though they were entirely adequate not only to illustrate, but even to explain, His supreme authority. The moral law is assumed to be sufficiently well known by all for the practical purposes of life. Pains and pleasures, present and future, are attached respectively to its infringement and its observance. Men are automatically punished and rewarded, in strict accordance with their deserts. In the moral as in the physical world there is neither need nor room for the special interposition of the supreme Governor.

Whatever shortcomings such a view of the nature of God may have,—and they are both obvious and important,—yet in some respects it tallies with the promptings of the religious instincts of men. It is opposed to Materialism, avoiding the desperate necessity of ascribing to matter an independent eternal existence of its own. Nor is God reduced, as in Pantheism, to a mere abstraction, an impersonal substratum of the universe. He is a real person, standing over against the world and man. Human personality also is preserved. Man retains his freedom, and justice is done to his responsibility. As he sows so shall he reap, according to laws that admit of no exception. Obviously in these ideas there is much that is true, and the truth is of that positive kind to which appeal must be made in practical exhortation and the enforcement of ethical teaching. But with the truth is mingled much error. The consequent weaknesses of Deism are both theoretical and practical.

2. Defects in conceptions of Creation and Finite Existence.—Deism labours under the disadvantage of being a dualistic explanation of the world. Not indeed that it is explicitly so. The charge would be repudiated. But the repudiation means no more than that the Deist is unconscious of the fact, having been content to leave unexamined many of the conceptions with which he deals. Notably is this the case with the idea of Creation. The God of the Deist is, in fact, a demiurge who has shaped into a cosmos a matter essentially alien from Himself. And, though the Deist replies that, according to his teaching, matter is not shaped by God but called into being by His creative word, the answer is unsatisfactory. For this creation of an alien matter out of nothing presents, on examination, insuperable difficulties. There is nothing to bridge the gap between the Creator and His creation. Nor is any attempt made to find in the nature of God any motive towards the act of creation. Recourse is had to the conception of an entirely arbitrary and inexplicable act of power.

Equally lacking in depth is the Deist's view of the problem of finite existence. From his standpoint the words 'in God we live, and move, and have our being' are destitute of any real significance. For to all intents and purposes he conceives of the world as existing independently of the Deity. The essential dualism of the conception is disguised, not removed, by laying stress on the origination of one form of existence from the other. Whatever may have been the relation of the two at the moment of creation, the finite, as it now is, possesses a substantial independence of the Infinite. The apparent simplicity of the view is gained by the abandonment of any attempt to reach the conception of an underlying unity.

A further weakness of Deism is disclosed as soon as the relation of the moral law to the will of God becomes the subject of discussion. For it is precisely here that those analogies with earthly rulers on which the Deist relies break down and fail the inquirer at the most critical point of his investigation. For, if the analogy of legislation be pressed, then it will appear as though the moral law were determined arbitrarily according to the Divine

will and pleasure. Its necessity or inevitableness seemingly disappears. On the other hand, if the judicial function of the Supreme Governor be put in the forefront, and the moral law be regarded as existing in the reason of things, and requiring only to be enforced by the Divine power, then it would seem as though the freedom of God's action were limited by a rule superior to Himself. From this dilemma the principles of Deism offer no way of escape. If the externality of God in relation to the world, physical or moral, be assumed, then in some way or other limitations and restrictions are placed upon the Divine nature. In the one case, God is left confronted by an independent material world; in the other case, by an independent law of right and wrong. And the very essence of Deism lies in its assumption of God's externality.

Theoretic unsoundness is attended with practical deficiencies. Deism has not been without injurious effect on those who have adopted it as their creed. If it be admitted that man's highest spiritual life is attained in proportion as he rises to communion with God, then it must be confessed that Deism can never carry the soul up into this region. The appearances of the world, however intricate in design and prodigal of beauty, convey to the heart no message significant of the indwelling presence of God. The most that the Deist may legitimately do is to follow back a many-linked chain of inference to a point in the far past when God, at the moment of creation, was in contact with His world. In a universe so conceived, man feels himself left to his own resources. A cold tribute of perfunctory worship is all that he is likely to offer to a God whose arm is never stretched out in answer to prayer, whose ear is never open to the supplication of the penitent. Man learns to think that his welfare depends entirely upon the accuracy of his knowledge of those general laws by which the course of the world is determined, and upon his skill in adapting himself to them. There is stimulated in him a spirit of self-sufficiency and self-assertion as towards God, and a certain hardness and lack of sympathy towards his fellow-men.

Deistic premisses do not positively exclude the possibility of revelation, but create a strong prejudice against it. For revelation is a species of miracle, and open to all the objections which, in the mind of the Deist, bear against the miraculous. It is an interference with the regular course of the world. In some forms of Deism the idea of a Divine interposition is accepted without hesitation or sense of incongruity. But further consideration is likely to suggest the thought that the need for interference with the world is due to some original weakness of construction; and the Deist, in his anxiety to uphold the credit of the First Cause, is led to deny first the need for, and then the fact of, revelation.

Deism is a curiously unstable system of belief. It could hardly be otherwise, considering that the premisses from which it sets out are wanting in consistency and in definiteness. Beginning by assuming the unqualified correctness of a few of the truths which appeal to the religious instinct, it reaches at length a position in flagrant contradiction to fundamental religious beliefs. The utility of prayer and the possibility of communication between God and man are ideas which have always found a home in the unsophisticated religious consciousness; yet these are the ideas which Deism finally discovers to be incompatible with its teaching about the Divine nature. And, when these ideas have been repudiated, there follows the gradual encroachment of an irreligious temper, and the elimination from life of the effective power of religion. Though nominally belief in God be retained, it becomes wholly in-

operative—the furniture of the mind rather than the inspiration of the heart.

3. Examples of Deistic systems.—Deism in the sense which we are now investigating we have defined to be a tendency of thought. It is a tendency which for the most part has been counteracted by stronger forces. But occasional examples in the history of religion and philosophy prove that it is capable of gaining the ascendancy. Apart from the influence of revelation, the drift of ethnic religions has been in the direction of Polytheism and Pantheism rather than towards the opposite extreme of Deism. For men are swayed more easily by their emotions than by their reason, and to the feelings the colder system of Deism is less attractive than these other forms of error. The most conspicuous example of a religion in which Deistic forms of thought are paramount is Confucianism, which exhibits a characteristic combination of qualities and defects. In particular, there is a decorous recognition of heaven as the source from which man derives his nature, although, for the attainment of virtue, little importance is attached to the communication between God and man. Its ideal includes the observance of an exacting moral code, but does not rise above this level. Sin as an offence against God, and virtue as trustful dependence on His help, are conceptions that find no place in a system which is almost pure Deism.

Stoicism is another, but less complete, illustration of the working of the same tendency. The insistence on the law of nature, and on the universal order extending through the world, is a thoroughly 'Deistic' idea. So also, in several respects, are the ethical notions of the Stoics, their emphasis on the power of the will, and their doctrine of man's self-sufficiency. These indeed are points on which they set precedents followed in later times. For the 18th cent. Deists, familiarized through a classical education with the writings of the ancient Stoics, drew much of their inspiration from this source. On the other hand, Stoicism contained ideas irreconcilable with pure Deism. Its Pantheism, though far from being consistently developed to its logical issues, is sufficient to differentiate it from any system in which God is assumed to be personally distinct from the world. In ethics, its rejection of all utilitarian considerations is opposed to the characteristic temper of Deism. Thus, though there is a genetic relationship between Stoicism and English Deism, the offspring differed in some essential features from the parent.

Its marked preference for the Deistic explanation of the universe accounts in large measure alike for the strength and the weakness of Muhammadanism. No one will deny that the effect of the teaching of Islām is to produce in its adherents a very real and deep reverence for God, the all-powerful Creator and Ruler of the world. At the same time the oppressive sense of a great and unbridged gulf between God and man checks and thwarts the natural action of man's religious instincts. Great as is the regularity with which the prescribed forms of devotion are observed, the worshipper adores an infinitely distant God. The specifically Christian conception of freedom of access to the Divine throne is conspicuously absent. When petitions for particular benefits are offered up, they are addressed (at any rate in many parts of the Muhammadan world) to inferior powers rather than to God. This degradation of prayer is remarkable evidence of the obstacle which Deism opposes to the exercise of man's highest spiritual function, communion with his Maker.

After all, the classical example of the Deistic tendency is to be found in the 18th cent. Deists; and herein lies the justification for attaching to the same word an historical and an abstract sense.

In the writings of Toland, Collins, Tindal, and other historical Deists is contained the exposition of precisely those ideas which combine to make up Deism in the abstract. Not, indeed, that in any single one of these writers is Deism logically rounded off and cleared from all inconsistencies. Men seldom press their principles to the uttermost; nor were the Deists, with their lack of philosophical acumen, likely to be exceptions to the rule. Side by side with arguments which in effect exclude God's direct action on the world, they placed statements of belief which the most exacting Theist would find irreproachable. Gradually the logic of events disclosed the true implications of their principles, with the result that Deism was either repudiated in favour of a return to historic Christianity, or exchanged for avowed infidelity. See, further, art. THEISM.

DELHI.—The name applied specially to the modern city of Shāhjahānābād on the right bank of the Jumnā (lat. 28° 38' 58" N.; long. 77° 16' 30" E.), and generally to a collection of ruined cities, covering an area of about 45 sq. miles, in the neighbourhood. Classifying these cities from N. to S., we have (1) Firozābād of Firoz Shāh Tughlaq (c. A.D. 1360), adjoining modern Delhi on the south; (2) Indrapat or Indraprastha, associated with the earliest legends of the Aryan occupation of the Jumnā valley, the foundation of which by Yudhisthira and his brothers, the five Pāṇḍavas, is recorded in the Mahābhārata; the site was reoccupied by Humāyūn and Sher Shāh (c. 1540); (3) Sirī, fortified by Alā-ud-din (c. 1300); (4) Jāhānpanāh, the space between old Delhi and Sirī, which was gradually occupied and ultimately connected with the cities N. and S. of it (c. 1330); (5) Old Delhi, or the Fort of Rāe Pithorā, the original Delhi of the Pathān invaders in the 12th century; (6) Tughlaqābād, built by Muhammad bin Tughlaq (c. 1320). Modern Delhi, or Shāhjahānābād, named after the Emperor Shāhjahān (1628-58), may be said to date from about 1650, the famous palace being first erected (1638-48), and forming the nucleus of the new city. The cities thus enumerated contain a vast variety of architectural remains, some of the greatest interest and beauty. Here it is possible to name only a few of those most closely connected with the religious beliefs of the successive occupants of this historic site.

In the first place, Delhi contains two of the famous inscribed pillars of the Emperor Aśoka (q.v.), erected about 250 B.C. The inscriptions contain the code of moral and religious precepts promulgated by this great ruler. These pillars, one of which stands on the historic ridge, the other in the ruined city of Firozābād, were removed to Delhi in A.D. 1356 by Firoz Shāh Tughlaq, the former from Meerut in the United Provinces,

the other from Toprā in the Umballā district of the Panjāb. The pillar on the ridge was much injured by an explosion early in the 18th cent.; that at Firozābād is in an excellent state of preservation, and is the most interesting of all the Aśoka pillars, inasmuch as it is the only one on which the invaluable Seventh Edict is inscribed. Another interesting Hindu relic is the iron pillar which stands near the Kutab Minār in Old Delhi. It was erected by a certain Rājā Chandra, and may be dated approximately A.D. 400. It is a marvellous example of the skill attained by the Hindu metallurgists of the time. Close by, the mosque of Qutb-ud-din was rebuilt out of the materials of one or more Jain temples. One cloister, with rows of finely carved pillars, remains in good preservation. The innermost court of this mosque, with its corridors and west end, was built in A.D. 1191, and the screen of arches, the glory of the building, was erected six years later. The splendid tower, the Qutb or Kutab Minār, named after its founder, was completed by Shams-ud-din Altamsh (1211-36), who also extended the great mosque. Much controversy has arisen regarding the purpose for which this tower was erected. Fergusson (p. 506) denies that it has any connexion with the great mosque at the south-east corner of which it stands. According to him, 'it was not designed as a place from which the muezzin should call the prayers, though its lower gallery may have been used for that purpose also, but as a tower of victory,—a Jaya Stambha, in fact,—an emblem of conquest, which the Hindus could only too easily understand and appreciate.' This view appears to be mistaken.

Cunningham (*Archæological Reports*, iv. p. ix) shows that it is distinctly called a *mazanah*, or muazzin's tower, by the Syrian geographer Abulfida (A.D. 1273-1345), and he cites several examples of early mosques which have but one minār each. The inscriptions also prove that this was the purpose of its erection.

The lovely Alāi Darwāza, or gate of Alā, was built by Alā-ud-din Khilji (1295-1315). Close by is the beautiful tomb of Shams-ud-din.

'Though small,' writes Fergusson, 'it is one of the richest examples of Hindu art applied to Mahomedan purposes that Old Delhi affords, and is extremely beautiful, though the builders still display a certain inaptness in fitting the details to their new purposes. . . . In addition to the beauty of its details, it is interesting as being the oldest tomb known to exist in India. He (Shams-ud-din) died A.D. 1230.'

Among the other interesting and beautiful mosques, of which Delhi possesses such a large number, the following may be mentioned: the Kālā or Kalān Masjid, built in Firozābād about A.D. 1380, is interesting as an example of the early so-called Pathān style. The façade of the mosque of Sher Shāh in the Purāna Qila is, says Fanshawe (p. 228), 'quite the most striking bit of coloured decoration at Delhi, and has been satisfactorily restored. . . . The interior is extremely fine, the pattern in the pendentives below the dome being very effective.' 'The Jāmī Masjid, or cathedral mosque of Shāhjahān, built in 1648-50, is,' says Fergusson (p. 600), 'not unlike, in plan, the Moti Masjid of Agra (q.v.), though built on a much larger scale, and adorned with two noble minarets, which are wanting in the Agra example; while, from the somewhat capricious admixture of red sandstone with white marble, it is far from possessing the same elegance and purity of effect. It is, however, one of the few mosques, either in India or elsewhere, that are designed to produce a pleasing effect externally.' This great mosque, built close to the palace, seems to have rendered it unnecessary to erect a private court chapel within its walls. When a Moti Masjid was added by Aurangzib, the building was small, and, though pretty, quite unworthy of the place, and illustrates the rapid decadence of Muhammadan ecclesiastical architecture after the time of Shāhjahān.

Delhi is equally rich in the number and variety of its sepulchres. Humāyūn, the second Mughal Emperor, lies in a stately tomb. 'In mere beauty,' says Fanshawe (p. 230), 'it cannot, of course, compare with the Taj at Agra, but there is an effect of strength about it which becomes the last resting-place of a Moghul warrior whose life was marked by many struggles and vicissitudes; and most people will probably prefer its greater simplicity to either the son's [Akbar's] tomb at Sikandra, near Agra, or the grandson's [Jahāngīr's] tomb at Shadara, near Lahore.' The *dargāh*, or shrine, of Shaikh Nizām-ud-dīn Auliya and the other Chishtī shrines at Ajmīr, the Kutab and Pakpattan, are the places most revered in all India by Muhammadans. His story is fully given by Fanshawe (p. 236), who believes that there is no ground for the popular legend which attributes the origin of Thuggee to him. He died at Delhi in A.D. 1324, and the buildings—the gate of which bears the date 1378—are mostly due to the Emperor Firoz Shāh Tughlaq. Round the resting-place of the saint are many beautiful and interesting monuments. That of Jahānārā Begam, the faithful daughter of the Emperor Shāhjahān, bears the touching epitaph: 'Let green grass only conceal my grave; grass is the best covering of the grave of the meek.' Close by is the tomb of the unfortunate Emperor Muhammad Shāh, who died in 1748, in whose time Delhi was captured and sacked by the ruthless Persian, Nādir Shāh. If not a triumph of design, its beautiful pierced marble screens are admirable. Near these are the earlier tombs of the poet Amīr Khusrū, who died in 1324, and of the historian Khondamīr—the latter not being now identifiable.

W. CROOKE.

DELIBERATION.—Deliberation is a complex mental state, preceding, and issuing in, choice or decision. It is a fundamental characteristic of personal consciousness, due to the fact that a mind furnished with experience is generally confronted with alternative possibilities. There is in the child a long and interesting genetic period before full-blown deliberation is born. This early dawning stage, before self-consciousness has arrived, and while the processes of decision are below the ideational level, has been called 'deliberative suggestion.' While life is still on the organic and impulsive level, co-ordinate sense-stimuli confront one another, and there is a corresponding conflict of motor-reactions.

Baldwin, in his *Mental Development* (p. 127), gives a good example of this primitive type of deliberation. A child of eight months, under his observation, formed the habit of scratching the face of its mother or nurse with its finger-nails, until, as a result, the close proximity of any face was a sufficient suggestion for it to give a violent scratch. To break the habit, the child's father slapped its fingers each time it scratched, and after a few experiences the habitual reaction was checked. When a face approached the child, it would grow solemn and quiet, and gaze at the face, hardly moving a muscle; then, after a trying period of balance, it would either suddenly scratch or turn away to something which its father provided as a counter-attraction.

Out of this organic and neural stage the higher, full-grown type of deliberation evolves. These instinctive and impulsive motor processes, with their corresponding emotional tones, are gradually registered in consciousness and furnish the basic memory-material for *real* deliberation. The alternatives now in conflict are more or less clearly envisaged, and in turn occupy the centre of the

mental stage, until one alternative dominates attention and is selected, though throughout life conscious deliberation is only rarely necessary. Organized, i.e. habitual, reactions determine a very large part of our choices, and, though we often delay action because of inhibitory tendencies, such delay is not necessarily deliberation. Much of our deliberation, again, does not rise to a clear cognition of alternative ends. Blurred images, fitful feelings, disconnected words, or a system of mental 'labels,' often stand for the act of deliberation, and we oscillate from one alternative to the other without a clear forecast of the grounds at issue, or the ends in view. Moreover, we are often relieved of the necessity to deliberate by the dynamic character of ideas. Many of the acts of a normal person are *ideo-motor*, that is to say, the idea itself is propulsive enough to sweep directly and unhindered into action. All ideas would thus produce action (1) if they were sufficiently propulsive, and (2) if they did not meet conflicting situations in the mind. It is this complex conflict of ideas, of reasons, of motives, of practical means, that forces deliberation upon us.

The inhibitory situation which blocks impulsive tendencies or *ideo-motor* action, and which involves indecision and deliberation, may be, and often is, the marginal, or fringe, consciousness that forms the background to the idea in full focus. We cannot tell why we do not act upon the idea which points us towards any end. We feel an indescribable restraint that checks our impulses and holds us from action. As W. James puts it:

'No matter how sharp the foreground-reasons may be, or how imminently close to bursting through the dam and carrying the motor consequences their own way, the background, however dimly felt, is always there; and its presence . . . serves as an effective check upon the irrevocable discharge' (*Princ. of Psychology*, II, 529).

The period of hesitation, balance, or deliberation may be indefinitely prolonged; but usually, by processes which are largely sub-conscious, the 'reasons' for one alternative over the other, or for one possibility over the others, come into clearer focus, stay fixed in attention, and plainly dominate; and the mind settles into a decision.

The moral significance of this inward balance, this weighing of alternatives, is obvious. All higher ethical behaviour has its rise here. The person who *deliberates* is no longer at the mercy of the solicitation of instinct, impulse, or a sudden thought; for all these motor tendencies are now forced to run the gauntlet of well-organized inhibitions. Each idea must dominate, if it is to dominate at all, by finding its place in the complex whole of a formed consciousness by adjusting itself to the ground-swell of a fashioned character.

A genuine moral decision, a self-determined action, is arrived at only when the permanent core of the self has found expression; and that is ordinarily reached through serious reflexion and exhausting inner struggle, which is *deliberation* in its deepest significance.

RUFUS M. JONES.

DELICT.—Considerable difficulty exists in regard to the definition of the term 'delict' in Roman law and in systems of modern law founded on the Roman. The difficulties are not so great, however, as those which attach to the definition of 'tort,' the term which, on the whole, corresponds to it in English law. English lawyers have failed to produce a perfectly satisfactory definition of the latter term, and it is probable that it really represents, as Markby (*Elements of Law*, p. 347) says, a false

classification. Usage, due to historical accident and variety of jurisdiction, has excluded from the English term cases which in principle fall under it. The definition of 'delict' in General Jurisprudence ought to give the essential principle underlying the technicalities of particular legal systems.

Moyle (*Justinian's Institutions*, lib. iv. pt. 1, note) says: 'A delict is usually defined as a violation of a *jus in rem* which generates an obligation remissible by the private individual who is wronged.' He finds fault with this definition, as admitting cases where the party injured is only entitled to recover damages. According to Moyle (*ib.*), true delicts possess three peculiarities: they give rise to independent obligations; they always involve *dolus* or *culpa*; and the remedies by which they are redressed are penal. Sohm (*Institutes*, Eng. tr., 1901, p. 432), on the other hand, includes such non-penal actions under actions arising from delicts.

The above definition seeks to distinguish 'delict,' as generating an obligation remissible by the private individual, from 'crime.' This is to adopt Austin's distinction between civil and criminal injuries; for he holds that the distinction consists in a mere difference of procedure, viz. whether the offence is pursued at the discretion of the injured party or at that of the State (*Lectures on Jurisprudence*⁸, p. 405). Blackstone (iv. 5), followed by Holland (*Elements of Jurisprudence*¹⁰, p. 320), regards the distinction as turning on whether the wrong is one against individuals as individuals, or affects the whole community as a community. Again, some have regarded the very circumstance whether mere redress is given for loss suffered, or whether, on the other hand, a penalty is inflicted for wrong done, as the distinguishing feature between civil and criminal injuries. If the latter line of distinction be adopted, what Moyle considers an essential of all delicts would become the distinguishing characteristic of crimes as contrasted with delicts.

In English law, wrongs to property to which no ethical censure attaches are included among 'torts.' Pollock (*Law of Torts*⁸, p. 18), in order to maintain intact the features of *dolus* ('wrongful intention') or *culpa* ('negligence'), and consequent penal culpability, as essential ingredients in those torts that are delicts, regards the torts from which these features are absent as obligations arising, not *ex delicto*, but *quasi ex delicto*. This leads to the distinction between delicts and quasi-delicts. By some there is said to be no distinction in principle, delicts being those wrongs which were made actionable by the old civil law of Rome, quasi-delicts those which were made actionable by the legislation of the prætor. If, however, we take the instances given in the *Institutes of Justinian*,—a judge who, corruptly or through ignorance of law, has made a suit his own, and an innkeeper who is responsible for the loss of property of his guests,—we see a distinction perfectly analogous to that between contracts and quasi-contracts. As in some cases the law establishes a tie or obligation between the parties, the same as would have existed had there been a contract between them, so, in other cases, it establishes an obligation similar to that which would have arisen, had a delict been committed. The point of difference between a contract and a quasi-contract is that one is formed voluntarily by the person bound, the other is formed involuntarily. In like manner, in the case of a delict, there is voluntary action—action from which it is possible to abstain; in the case of a quasi-delict, the obligation arises from an act or position in regard to which the person bound has had no option. The judge must decide the suit. The innkeeper is bound by the act of the thief. There may or may not be *dolus* or *culpa*. It is true that, in the case of the corruptly decided suit, a voli-

tional element is present. The involuntary element arises from the law which forces on the judge the position of having to decide the suit. Yet this very case shows that *dolus* or *culpa* may be present in quasi-delicts. If this is the true point of distinction between delict and quasi-delict, it justifies the profound comment of Austin (styled by Pollock [*op. cit.* p. 18] 'perverse and unintelligent criticism'), which implies that there is no essential distinction from the point of view of legal classification between quasi-contract and quasi-delict (Austin, *op. cit.* p. 914). The only possible distinction must be that stated by Austin: that, in the one, the obligation arises from services rendered; in the other, from wrong done or services omitted.

GEORGE J. STOKES.

DELOS.—See AMPHICTYONY.

DELPHI.—See AMPHICTYONY, ORACLES (Gr.).

DELUGE.—I. Meaning of the term.—The word 'Deluge' (Lat. *diluvium*, Fr. *déluge*, 'a great flood') has been very generally used to denote the Bible Flood (Heb. *וַיָּבֹא*) recorded in Gn 6-9¹⁷. It is commonly understood to imply that the Noachian Flood, as the narrative naturally suggests, covered the surface of the whole world, and that all men and all terrestrial animals perished, excepting those provisionally saved in the Ark (see esp. 6⁷⁻¹³ 7¹⁻²³ 9¹⁵).

II. Supposed confirmation of the Bible Deluge.—So considered, the Deluge formed, it was once believed, a very important epoch in the world's history.

1. Attention was called to the marked difference between the extinct species of animals which lived before the Deluge, and whose fossil remains are found in various geological strata, and those in existence at the present day; nor does it seem always to have been realized that this distinction is in itself an argument against the literal truth of the Bible narrative, according to which all species of animals should have survived, or God's purpose must have failed.

2. A more cogent proof of the general truth of the Bible story seemed to lie in the fact that Deluge stories, or stories in which a great Flood forms a more or less prominent part, are remarkably frequent in the folklore of the ancient literature of peoples scattered over the greater part of the world. It has been confidently argued that these all originated in the great universal Deluge, of which they were more or less obscure traditions handed down from their ancestors—Shem, Ham, and Japheth. Moreover, special stress was laid on the extraordinary accuracy with which the memory of certain details had in some cases been preserved (see below, IV. A. v.).

III. Reasons for not accepting a universal Deluge.—The belief in a universal Deluge has long been abandoned by well-informed writers.

1. It was found impossible thus to account satisfactorily for the various races of mankind and their distribution. Ethnological research suggested the existence of races altogether independent of the Bible system, who survived the Flood and were themselves descended from a pre-Adamite stock (see ANTEDILUVIANS).

2. But the most fatal objections are those that arise from a study of the natural sciences.

(a) Geology, as now understood, gives a very simple and credible account of the history of the world by natural agencies—shrinkage, gradual sinkings and upheavals, deposits by action of animalcules and otherwise, the action of heat, water, and ice, etc., in which a Deluge finds no place. It is, in fact, absolutely

impossible, unless we may postulate a period in which the surface of the earth was so even that all the water possible at any given time could have covered it as one vast ocean. But even if this ever were so, such a Deluge would find its analogue, not in the Bible Flood, but in the 'deep' (*tēhōm*) of Gn 1².

(b) The study of comparative Zoology has abundantly proved that there is no definitely marked division between extinct species of animals and those of the present day which could be accounted for by such a break in the history of the animal world. In fact, the extinct species, as, e.g., the trilobite, ammonite, and ichthyosaurus, had died out countless ages before man appeared on the earth, and by the operation of natural laws which still prevail.

(c) The same also is true of plant life and its history. And in this connexion it may be observed that the Bible story, in contradistinction to the Akkadian (see below, IV. A. vi. (m)), says nothing of the preservation of vegetation, the greater part of which must have perished had the Flood lasted a year.

3. To the unscientific mind, however, the most striking difficulties are those which arise from the obvious improbabilities, or rather impossibilities, of the story of Genesis itself.

Most of us have from childhood, through the influence of pictures and toy-arks, been accustomed to imagine Noah's Ark as a great vessel with a huge railed hold in the middle. But there is nothing in the Hebrew *תֵּבָה* or in the Bible narrative to suggest anything of the kind. The Ark was rather a huge box with a closed door and dark windows, which had to be opened for its inmates to look out. There were no sails or oars, no sailors to navigate this strange structure or tell Noah what he wished to know. The box, nevertheless, floated safely across what one would naturally have supposed a stormy sea (see Gn 7¹¹, and cf. Akkadian story [V. A. i.]), and that for presumably some hundreds of miles to the mountains of Armenia (Ararat). Large as this box was, it was infinitely too small to contain sevens of all clean animals, and pairs of unclean animals, *as we now know them*. But this is what the story requires, unless we are to suppose—a thing highly improbable in itself, and opposed to geological records—that there has been a very large evolution of species since that, geologically speaking, recent period. These animals, thus huddled up together, are tended and preserved for apparently a whole year with necessarily huge supplies of food of various kinds—animal and vegetable. In a word, four men and four women were able to do, under such conditions, without, it would seem, the slightest difficulty, what taxes the utmost skill and ingenuity of zoologists with such space and under such conditions as are possible in our Zoological Gardens. Imagine, for example, the hippopotamus or the seal a whole year without water, or the polar bear cooped up for a single year in the vitiated atmosphere of a 'room' in the Ark! But even these difficulties are hardly so bewildering to the imagination as those connected with collecting the animals and getting them into the Ark. If we attempt to realize the journeys necessary to the Tropics and the Arctic regions, to islands and continents, to marshes and mountains and seas, the difficulty of capturing all these animals alive, bringing them back and getting them into the Ark, we are forced to the conclusion that it was absolutely impossible, except by a series of miracles, of which the story in the Bible gives no hint. The whole is narrated in a simple childlike way by those who evidently did not see the difficulties, and obviously could not have seen them then as we see them now.

4. A further ground for not accepting as literally true the Bible Deluge story will be found by comparing it with parallel stories of similar origin which will presently be discussed. It will be sufficient to observe here that diverging accounts of any supposed event tend of themselves to cast suspicion on any one of them, unless that is obviously the source of the rest, which certainly cannot be proved of the Bible story.

5. To these difficulties may be added, in conclusion, the general difficulties in accepting as historically and literally true the early chapters of Genesis, of which the Deluge story forms a part. One who on scientific grounds rejects the literal truth of Gn 1, or on mythological grounds that of Gn 2. 3, would very naturally feel some hesitation in accepting the Deluge story, even if it presented no serious difficulties of its own.

IV. Explanations of Deluge stories discussed.—But, if such a Deluge as that described in the Bible is impossible, at least without a series of improbable miracles, how else explain the prevalence of that belief among so many and so far-separated peoples? An attempt to answer this question will form the chief subject of this article. It involves a complicated inquiry. The Deluge, or Flood, stories in question vary so greatly that a really adequate discussion would carry us beyond our necessary limits. The reader will grasp the full force of the

arguments given only if he studies for himself the stories as given by Andree and in other sources here referred to. The course now proposed is first to give the answers which have already been suggested, with such illustrations and comments as may help the student towards a satisfactory solution, and then to discuss separately some of the more important stories or groups of stories on mainly ethnological or geographical lines.

Speaking generally, then, the following five explanations have been given of the prevalence of Deluge, or Flood, stories among different races of mankind: that they are (A) traditions of the Bible Deluge; (B) traditions of independent, generally local, floods of greater or less extent; (C) pseudo-scientific explanations of natural phenomena or the like; (D) parts of cosmological systems; (E) Nature myths. In point of fact, comparatively few writers have adopted any one of these theories exclusively. Cheyne, for example, in his article 'Deluge,' in *EBR*⁹, made a marked distinction between a Deluge proper—a supposed submersion of the whole world—and partial floods, which may have given rise to Deluge stories. Certainly few, whatever general theory of Deluge stories they may hold, would fail to recognize that the Chinese story, at any rate, is based on the tradition of a local flood.

A. *The traditional origin of Deluge stories.*—Is the belief that the many and various Deluge stories of different parts of the world had their common origin in the Flood described in the Bible, borne out by the stories themselves *in detail* and by what we may reasonably infer as to their history?

i. Andree lays special stress on the fact that there are many parts of the world where no Deluge story has yet been discovered, such as Egypt and Japan. There are others, such as Africa, where they are very rare. It is therefore, so far as our present knowledge goes, an exaggeration to say, with some writers, that the tradition of a Deluge of some sort is practically universal, or even, as Lenormant maintained (*Orig.* i. 489), among all except black races. On the other hand, it must frankly be recognized that Flood stories are very numerous, and that they are found among nations scattered far and wide over the world.

ii. Exceptions must be made of a large number of stories which have evidently a local origin.

iii. Account must be taken of the influence of missionaries in unconsciously, or even consciously, changing and developing folklore, and of the difficulty which the savage mind has in distinguishing clearly between old and new, and its frequent tendency to paint the old in new colours. It was the avowed policy of many missionaries to make Bible stories more acceptable by combining them with ideas with which their converts were already familiar. Moreover, the missionary, through whom the Deluge stories were in many cases originally communicated, was a prejudiced witness. He had a very natural wish to find confirmation of an event which he believed to be undeniably true, and which it seemed impiety to deny. No wonder if, without the least wish to deceive, he encouraged his heathen convert to give him the kind of information he desired, and, in reporting it, unconsciously assimilated it still more to the familiar Bible story. Andree (p. 111) has given an interesting example of the way in which natives were sometimes asked leading questions.

iv. That many of the Deluge stories current among uncivilized tribes were actually coloured by Christian influence becomes evident on examination of the stories themselves. For it will be found that—

(a) Those Biblical details on which so much stress is sometimes laid are often attached to a

story entirely unlike the Bible Deluge narrative, both in character and in purpose.

Thus the sending out of the raven and the dove by the old man who had found refuge from the Deluge in a boat on one of the Rocky Mountains (Déné Indians) is altogether meaningless, and yet, according to Petitot, it is almost exactly similar to the Bible incident, except that a fir-branch is substituted for the there unknown olive-branch. A still more interesting variation is found in a story as told by the South-American Macusi tribe, in which a rat sent out to investigate matters came back with an ear of maize in its mouth. Here the Biblical motive is combined with the common feature among Indian Deluge stories of sending out animals to procure land (see below, IV. C. (a)).

(b) The Deluge stories which thus resemble the Bible narrative in some of its details often betray their Biblical colouring by mixing up other familiar Bible stories, such as the creation of woman and the Tower of Babel.

When we read in the story of the Macusi just referred to that, when the Good Spirit created the first man, the latter fell into a deep sleep, and on waking up found a woman standing by his side, we are not surprised to hear the incident of the rat and the ear of maize. In a story of the Papagos, in Arizona, it is the hero of the Deluge, Montezuma, who, disregarding the warning of the Great Spirit, builds a house that should reach to heaven, which is destroyed before its completion by lightning from heaven. In the story of the Washo, a Californian tribe, the slaves are compelled by their masters to build a temple as a place of refuge from any future Flood. When a great earthquake with a terrible rain of fire occurs, and the temple sinks up to its dome in the Tahoe Lake, the masters clamber in vain on to its top, from whence they are hurled by the angry god. Andree remarks here that the building of the temple is evidently a modern feature alien to the customs of the tribe, and certainly a domed temple is not a very ancient feature. That the purpose of the temple is not worship, but escape from the Flood, would seem to suggest an early adaptation of the Tower of Babel story. It would thus be a parallel to the story of the neighbouring Papagos, and to that of the Mandans (see IV. A. vi. (e)).

(c) Speaking generally, what have the appearance of traits due to Christian influence are found most frequently in those countries where Christian influence has been longest at work, especially on the American continent.

v. The argument from Biblical details in Flood stories is in any case hazardous, as it proves too much. We find details not given in the Bible narrative also repeating themselves in a most remarkable way in the legends of localities far removed from each other.

(1) The boat or raft of safety is frequently described as moored by a rope. A new element is sometimes introduced by some of the ropes not being long enough and the occupants of the boats being drowned (Finns [Lenormant, *Origines*, i. 455]). In one form of a legend of the Pelew Islanders, such was the fate even of the one surviving old woman, until the oldest of the gods in pity revived her. (2) Again, the Greek story of Deukalion and Pyrrha and the stones has an exact analogy in the story of the Maipuri, in which the coco-nuts thrown by the man over his head become men, those thrown by the woman, women. In the legend of other tribes on the Orinoco, as also of the Macusi, stones were thrown by the surviving man. In a Lithuanian story a rainbow was sent to the old couple to comfort them, and to advise them, if they would have offspring, to leap over 'the bones of the earth.' (3) The miraculous growth of the fish, a conspicuous feature of the Indian legend (see V. D. I.), has its counterpart in the cuttle-fish of the Thlinkits, which grew so large as to fill the whole house.

It is by no means easy to say how far features of this kind are actually borrowed from other stories, and how far they are the result of imagination and reason acting in similar fashion on different peoples. There is certainly no difficulty in supposing that the tying of the boat was introduced as the most natural thing for the survivors to do. On the other hand, the enigmatical phrase 'bones of the earth' combined with the consolation of the rainbow (Lithuanians), and a similar combination of the stones story with the rat and the maize-ear (Macusi, see above, IV. A. iv. (a)), suggest that both elements in either case were due originally to the influence of Christian teachers. We can readily understand how well-educated missionaries might, in drawing attention to the prevalence of Deluge stories, have instanced that of Deukalion, and how such a picturesque incident might have found its way into a popular folk-tale.

vi. The extraordinary variety in every detail in the different Deluge stories makes it improbable that all originated from one traditional story, as will best be realized by taking what might be regarded as the normal type and pointing out some of the variations which we find. Thus: (a) some god or gods, angry with the Antediluvians (b) usually on some specific ground, (c) determine to send a Deluge, but (d) give warning of it to some

one or more beings. (e) The latter, usually following Divine directions, construct some kind of boat or box, or adopt some other means of escape. (f) In this structure they preserve also the necessities of life, including domestic animals, more rarely pairs of animals generally. (g) Shortly after, (h) by rain or other means, (i) comes a Deluge. (j) When the Deluge subsides, (k) they land on some mountain or island, and (l) sometimes offer a sacrifice. (m) Future descendants of men (and sometimes of animals also) are reproduced, often in a miraculous way. (n) The survivors (or the chief of them) are translated to heaven.

This imaginary norm, from which, or from something like it, all the stories might naturally be supposed to have come, is obtained by putting together the features which are most frequently found. No story, in fact, gives them all. Even the Bible story has no translation of Noah (but see ANTEDILUVIANS). The Greek legends have no post-diluvian sacrifice, and the Indian story in its earliest forms gives no reason at all for the Deluge. But, apart from such omissions, we find variations, under each head, of almost every conceivable kind.

(a) The Deluge, though almost always the work of some god, is occasionally, among the North American Indians, ascribed to a malignant being, as the Black Serpent (Algonquins), an eagle (Pimas), or a raven (Hare Indians).

(b) (1) The Deluge is a punishment for sin, not only in the Bible, but among the Pelew and Fiji and Society Islanders, the Algonquins, and some others. (2) More frequently it results from the resentment of a god for some act of violence or personal injury, such as, rather frequently, the refusal of hospitality (Greek Denkalion story) or the slaying of a favourite. Thus, according to a Greek Flood story preserved by Nonnus, it was sent to put out a conflagration caused by Zeus for the murder of Dionysos by the Titans (Usener, p. 42). In a story of the Fiji Islanders it is the anger of the god for the slaughter of his favourite bird. The Dayaks of Borneo attribute a great Flood to the destruction and cooking of a boa constrictor. With the Hare Indians (N. America) it is the raven who brings about the Deluge to punish the Wise Man for having thrown him into the fire, though, curiously enough, the raven escapes with him on the raft. Even more original is the cause of the Deluge as reported from the Leeward Islands. A fisherman who had been fishing in sacred waters caught the hair of the sea-god as the latter was having a nap (Ellis, *Polynesian Researches*, ii. 58). (3) In the Transylvanian Gipsy story it is the punishment for the disobedience of a woman in eating a forbidden fish—a motive which may have originated from the Bible story of the Fall. In both these last stories the Deluge appears singularly unreasonable. In the latter the woman herself, who is alone responsible for the crime, is slain by the first flash of lightning; in the former, more unfairly still, the fisherman, his wife, and, according to some versions of the story, a few friends, are alone allowed to escape.

(c) The warning of the Deluge is generally made by revelation, sometimes directly (Genesis), sometimes by another god than the author of the Deluge (Akkadian), often through the medium of some animal, as the fish, which a later form of the story regards as an incarnation of Vishnu (Indian), by a wounded dog (Cherokees), or by llamas to a shepherd (Peru). The last two cases seem to have arisen out of the observed faculty that some domestic animals have of foretelling rain. The motive of the Indian story seems connected with an ancient mythological conception, which attached a peculiar sanctity to the fish. In a story of the

Pimas a warning is given three times in vain by an eagle (himself the cause of the Flood) to a prophet (Bancroft, *NR* iii. 78).

(d) Those who are permitted to escape vary very largely. Frequently it is one person only, as the old man in the Gipsy story referred to above, the god's son Szeuka (Pimas, see Bancroft, iii. 78), one woman (Borneo), or frequently a man and his wife (Darjiling, Himalayas), a brother and sister (Kolarians, East India), or two pairs (Andamanese). Less frequently a few friends or relatives are also saved, as in the Bible and in the Leeward Islands stories, where, however, accounts differ. Rarely we find a considerable number, including slaves (Akkadian). In a highly original story of Kabadi, in New Guinea, all the men escape by getting up into the peak of a mountain and waiting till the Deluge has subsided. In other stories they are all destroyed, and the Deluge is followed by a new creation (Kashmir). Especially was this the case where the purpose of the Deluge was the destruction of monsters (see ANTE-DILUVIANS). In some American Indian stories it is an animal only that survives, such as the coyote (Wappo, etc., California); in a legend of the neighbouring Papagos, it is the coyote and the demi-god Montezuma, while the Thlinkits make the raven and his mother the sole survivors.

(e) While by far the most usual means of escape is by one or more boats or rafts, there are a few legends outside the Bible story in which a larger or smaller box or ark serves the purpose, as with the Banar of Cambodia and in some forms of the Greek Deukalion legend. Possibly this is the origin of the so-called 'Big Canoe,' a sort of sacred tub, which forms the centre of extremely curious ceremonies among the N. American Mandans, which are certainly connected with some old Deluge story (see G. Catlin, *O-Kee-pa*, London, 1866). Very frequently the refugees escape to a mountain, either by means of a boat or directly, and some very curious and graphic accounts are given of the straits to which the survivors were reduced, as the water came higher and higher.

Thus in a legend of the Ojibwas, Manabozho, when the waters have reached the mountain peak, gets up into the topmost branch of a fir-tree, where the waters gradually rise to his mouth, in which position he has to wait five days before he discovers a means of safety. In another story the survivors escape from the mountain peak in a coco-nut shell thrown down casually by a god as he was feasting (Lithuanians); and in yet another it is by a canoe which the survivor makes out of a piece of the sky (Sac and Fox Indians). In not a few stories the survivors escape by simply climbing up into a fruit-tree (Karens in Burma, Tupi in Brazil, Acawaiois in British Guiana), or, more curiously still, by sheltering under a tree (Mundari of East India). In some Peruvian stories the mountain of refuge itself floats on the Deluge like a boat. Caves are, singularly enough, the place of refuge in a legend of the Mexican Oholula and of the Arawaks of British Guiana, and the hole of a monster land-crab serves the purpose in the story of the Uraus, a tribe of the Kolarian Indians. From a translation of a very remarkable bark pictograph of a tribe of the Algonquins, it would appear that the place of refuge was a turtle's back, which became identified with an island. But quaintest of all is the story of the Crees, in which the one surviving girl saves herself by catching hold of the foot of an eagle, which carries her to the top of a lofty mountain. In the Thlinkit story the raven and his mother escape in the skins of cranes; in that of the Papagos the coyote saves himself in a bamboo sealed with resin.

(f) Speaking generally, food for the future is provided in one of two ways, either by the survivors taking it with them, as in the Bible story, or by its being produced in some marvellous way afterwards. The preservation of animals, apart from their use for food and sacrifice, is very rare, not being found even in the Akkadian version, and is probably derived from the Bible story. Food is miraculously brought to the surviving brothers by two primeval parrots in a Peruvian story (cf. Elijah and the ravens); in another the survivors feed on fish, which they warm under their arm-pits (Tolowa in California).

(g) The Deluge in many stories comes without warning, as, it would appear, the necessary consequence of crime, e.g. the cooking of the fish and the serpent respectively in the Gipsy and Dayak stories already referred to. More frequently it is after a short interval of a day or so, not foretold beforehand. The 7th day of the Bible (Gn 74. 10), and probably of the Akkadian story also, has its parallel in a late version of the Indian story (see below, V. D. i. (3)).

(h) The physical causes to which the Deluge is assigned in different legends are numerous. Naturally enough it is generally rain, often with thunder and lightning. In a Sac and Fox Indian story the rain is said to have fallen in drops as large as a wigwam. Less frequently it is the incursion of a wave (Washo, California), or the pouring in of the water of the sea on to the land (Makah Indians of Cape Flattery). Sometimes it is the sudden melting of the winter snow, as when a mouse gnawed through the bag containing the heat and let it out (Chippewas). Sometimes the cause ascribed is very fantastic. A man accidentally lets fall and breaks the jar containing the water of the ocean which he had picked up out of curiosity (Haiti), and it is the same motive, with the same fatal consequences, that tempts the ape to remove the mat which covered the waters in a hollow tree through which they communicated with the ocean (Acawaiois).

(i) In a Finnish story the Deluge is of hot water. According to a legend of the Quiché Indians, a deluge of resin followed one of water, and in some cases fire may be said to take the place of water, the conflagration story being in many respects analogous to the more usual deluge of water (Yuracaris of Bolivia, Mundari of East India; cf. artt. AGES OF THE WORLD).

In extent the Deluge varies from an obviously local flood to a universal deluge. Very frequently everything is covered except a few lofty ranges such as the Rocky Mountains (Déné Indians). In one Australian legend the low island of refuge alone remained uncovered, when the lofty mountain on the mainland, on which the people had taken refuge, was submerged, this idea probably arising from a not uncommon notion that islands float.

(j) The duration of the Deluge is very seldom given, and, as the two Bible narratives differ both from one another and from the Akkadian (see below, V. A. i.), little importance need be attached to the fact that 40 days, in agreement with the Bible (J), is the duration of the Deluge according to some of the legends of the Polynesian Islands (see Max Müller in Preface to Gill's *Myths*). It is hardly likely that in all these centuries a single isolated detail should have been accurately preserved which had become obliterated in what were, *ex hypothesi*, comparatively early recollections of the fact.

(k) See under (e).

(l) This is an uncommon feature almost confined to the Semitic legends and some forms of the Deukalion story. In the most important Indian story the Deluge leads up to a very complicated and scarcely intelligible religious ceremony; but this belongs rather to the next head.

(m) The most striking example of this is the story of Deukalion and Pyrrha; but, as already pointed out (IV. A. v. (2)), it has its analogies and possibly its derivatives in a Lithuanian and in certain S. American Indian stories. A more remarkable proceeding is that of the surviving coyote, who, according to the Wappo Indians, planted feathers wherever the wigwams used to stand and they grew into men and women. A similar story is told by Bancroft (iii. 87) of some Californian tribes who relate that men were created

by the coyote and a feather which became an eagle. The Déné Indians sometimes asserted that the gods changed animals into men, but it is not explained where the animals came from. In a story of the Pimas Szeuka, the surviving son of a god, having slain the eagle which had caused the Deluge, restored to life those whom it had killed (Bancroft, iii. 78). The Indian post-diluvian rite was a complicated sacrificial ceremony by which Manu was apparently directed to produce both men and animals by an offering of clarified butter. But it is impossible here to distinguish primitive legend from later ritual and mystic accretions.

Where there is a single survivor, or only survivors of one sex, the re-peopling of the earth is frequently effected by union with some god or animal.

We have an example of the former in a story of the Pelew Islanders. In the story of the Crees the surviving maiden forms an alliance with the great eagle, through whom she has effected her escape. In a Peruvian story one of the surviving brothers seizes the parrot who has brought him food and she becomes his wife. In the Akkadian story the preservation of seed is almost a unique feature. The necessity of re-planting the earth, or at any rate of re-stocking it with cereals and vegetables, does not generally seem to have suggested itself.

(n) The apotheosis of the chief survivors is an important feature of the Babylonian story. There may possibly be a trace of it also in Gn 6⁹ (P; cf. Gn 6²⁴; see ANTEDILUVIANS).

If, then, the argument from the many existing Deluge stories were pressed, the most that it could with any reason be supposed to prove would be a purely colourless tradition of a Deluge or great Flood of some sort; but any such argument would have to be largely discounted, if not altogether neutralized, by facts to be considered under the next head.

B. Local inundations.—That this supposition will account for a very large number of Flood stories is obvious.

i. The Chinese Deluge story is merely an early tradition, though highly coloured, of such an inundation as has frequently taken place in the valley of the Hwang Ho (see V. E. ii., iii.).

ii. Such stories are especially frequent in volcanic districts subject to earthquakes and seismic waves, as in the Prince of Wales Peninsula (Bering Strait), Cape Flattery (Washington), or the Tahoe Lake in California. In a legend connected with the last-named place the inundation is expressly ascribed to a monster wave which burst over the land. In the story of Cape Flattery, the prairie which was flooded was certainly once submarine, and has an alluvial deposit of about a foot, as Swan argues, who gave the story in *Smithsonian Contributions to Knowledge*, vol. xvi. (quoted by Eells in *Amer. Antiquarian*, i. 70-72). In northern districts the Deluge is sometimes assigned to the melting of the snow (e.g. Chippewas), and very probably originated in a reminiscence of an exceptional inundation from such a cause. The same may be said of the Deluge stories of island peoples. The experience of high tides occasioned by storms would naturally make an impression upon the active imagination of a savage race, and occasion, or at any rate give a certain colour to, stories of this kind. Such tides are the common nightmare of a child living by the sea; and the normal savage is like a clever child only half awake. A more potent cause might be found in the submergence or appearance of islands through volcanic action.

iii. That so many Deluge stories obviously originated in purely local events makes it highly probable that this is the true explanation of many others, where the local cause has been obscured as a tradition, has then become a legend, and has finally passed into a myth, the tendency of the imagination being towards making the story more and more wonderful. Thus, what was originally

a local flood may become a universal Deluge, the surviving ancestors being a few single individuals out of the human race. What was quite natural is ascribed to the direct, and often quite miraculous, action of Divine Beings. How far any particular story can be thus explained must be considered on its own merits.

C. Explanations of natural phenomena.—How far did Deluge and Flood stories arise as a hypothetical explanation of observed facts or racial conditions?

(a) They often appear as a pseudo-scientific explanation of natural phenomena. The savage mind would naturally ask, How came the sea and land, mountains and valleys, and lakes and islands to be where they are and what they are? Whence differences of colour, language, and character? How came the fossils which are found upon the hills? To these questions they found an answer in the hypothesis of a great Deluge which left the fish turned into stone on the land (Eskimo [see Hall, *Life with the Esquimaux*, London, 1864, ii. 318], Leeward Islanders, Samoan Islanders); or formed a large lake (such as the Tahoe in California, or Dilolo Lake on the southern border of the Congo State); or caused men to seek refuge in distant lands, to divide and learn different languages (Twanas [Washington], Makah Indians of Cape Flattery, Thlinkits, Bella-Coolas); or left the red colouring on the Indians' skin (Crees). Sometimes the Deluge plays quite a subordinate part in a story which itself serves a different purpose.

A Deluge story of the Pelew Islanders is connected with a picturesque account of the origin of the red stripe on the head of the bird called the tarii (*Rallus pectoralis*). A Persian Deluge myth, among other motives, explains the saltiness of the sea. In an interesting myth connected with Mangaia (Cook Islands), the general purpose of which is to explain the origin of the coco-nut, the Flood is merely required to bring up the eel, out of whom the coco-nut grew, to the door of the maiden Ina's hut, whose plous duty it was to slay him. In fact, there is another version of the same myth in which there is no Flood at all (Gill, *Myths*, v. 77-81). Gill, who was for 22 years a missionary in the Hervey Group, had specially favourable opportunities of collecting stories influenced by Christian teaching, as he obtained them direct from Tereaval, the last priest of the god Tialo, who took the double form of a shark and an eel. Incidentally also the Flood story given above accounts for the passage by which the water drains into the sea. In another legend, told by Gill, the chief object of the Flood was to put out the furnace in which Miru, the hag of the nether world, had designed to cook Ngaru. The Flood puts out the furnace and permits Ngaru to effect his escape.

It is very probable that to the same intelligent curiosity we must refer those many stories which seem to lead up to the origin of land, or at least of islands.

There is an old Indian legend according to which Visnu in his avatarā as a boar brings up land from the bottom of the ocean (Muir, *Original Sanskrit Texts*, vol. 1.² [Lond. 1873], chs. I. and vii.). With this we may compare the legend, that Itangi pulled up the island of Mangaia out of the nether world. But there are several apparently analogous stories among the American Indians connected with a Deluge which occurs as an event, not as a primordial condition. In such stories some animal, a duck or beaver or fish, more often a musk-rat, dives down for earth and brings it up between its feet or in its mouth (Sac and Fox Indians, Chippewas, Ojibwas). Some have compared the curious sequel to the sending out of birds by Xisuthros in the later Babylonian story. But there the clay on the feet of the birds is a proof of the re-appearance of ground, on which, though still wet, the birds could walk, and it is a far less poetical variant of the dove and the olive branch. It is very unlikely that, as Andree thinks, the sending out of animals in the American Indian stories has any connexion with that Bible incident. More probably it is an ancient myth accounting for the origin of land among an originally seafaring people, which has become mixed up with later inundation traditions of a more local character.

(b) It seems probable that in some cases, among island and coast-land peoples, the Deluge story originated in the tradition of the early migration of the people. In such cases the ocean is itself the Deluge, and the island or coast-land the home to which they escaped. In some such way the Binna account for their settlement in the Malay Peninsula. How easily traditions of such a kind could

pass into myths may be seen in many of these Deluge stories, in which comparatively recent events have become interwoven with them.

Thus a Deluge myth of Western Australia is connected with a quarrel between 'black' and 'white' races, and can have originated or taken its present shape only after the first English settlements in the country. In a Deluge myth of the Papagos, the Great Spirit, unable otherwise to tame Montezuma's rebellious temper, sent an insect into the unknown land of the East to fetch the Spaniards, who destroyed Montezuma, and people no longer worshipped him as god. Here Montezuma, an Aztec ruler, who was actually killed by the Spaniards in 1520, has become the demi-god hero of an ancient Flood myth.

D. Deluge stories explained as part of a definite cosmological system.—This has been incidentally touched upon under the last head. Some of the Deluge myths might certainly be so explained, e.g. that of Viṣṇu in his *avatāra* as a boar bringing up land from the bottom of the ocean. But in such stories the ocean is not so much a Deluge as the primeval Deep (cf. *ḥamāh*, Gn 1²). As a rule, however, such conceptions are hardly of a kind to account for the general prevalence of Deluge stories. Moreover, the savage mind, at any rate, was essentially local and limited in its range, and comprised within its view very little beyond the horizon of its ordinary experience.

E. Deluge stories explained as Nature myths.—In this view some forms of the Deluge story, especially those of Palestine, Babylon, Greece, and India, are a mythical representation of some ordinary natural phenomenon of constant recurrence. Noah in his Ark is generally regarded by its exponents as a sun myth, but as regards the interpretation of the story there is a wide divergence of opinion.

1. Cheyne, for example (see art. 'Deluge,' in *EB* 9), following Schirren and Gerland, suggests that the Deluge has been transferred from the sky to the earth. So understood, the progress of Noah in the Ark, like that of Zeus in his chariot, is a mythical interpretation of the course of the sun. But this would imply an incredible twist of the primitive imagination.

2. Usener, on the other hand, who has written on the subject at very great length, makes the whole point of the myth lie in the landing of the Deluge hero, which represents the rising sun. He derives his argument partly from philology, but chiefly from comparative mythology. He explains Deukalion as 'the little Zeus'—a suitable name for the newborn sun, and he compares the many stories, such as those of Perseus and Oedipus, in which a child is thrown into the sea in a chest or otherwise, and whose landing gives rise to some cult, which he connects sometimes, rather curiously, with that of the sun. In fact, almost every legend which has for its theme any one traversing the sea in a marvellous manner, from Arion on his dolphin to the legend of Lucian's corpse, is made to serve his purpose. Usener finds developments of the same idea in fairy tales, Christian legends, and many myths and religious customs, coins, etc., representing the sun-god, be it Dionysus or Saturn, in a ship. Strangest of all are the illustrations drawn from the legend of St. Christopher bearing the Infant Christ, and even an ancient picture of Christ's baptism. He lays great stress on the fact that the season of Baptism was called *Epiphaneia*, an emblem of rising light, and even directs attention to the fact that the water is depicted as stormy, seeing in this the idea that the water was conceived as lifting up the Christ. Similarly the Deluge might be regarded as lifting up the sun-god in the Ark, preparatory to his landing, i.e. rising. Such arguments as these hardly need serious discussion.

F. General conclusion.—Speaking generally, the comparative study of Deluge legends tends to make it more and more evident that, while a very large proportion of them certainly arose originally out of local events, these have always been highly coloured, and not infrequently quite transformed, by the imagination, which among more uncivilized races saw all Nature teeming with conscious life in manifold forms. Either in conjunction with such traditions, or sometimes independently of them, Deluge stories arose out of an inquisitive creative imagination, which first sought to explain the natural wonders of the present by even greater wonders in the past, and by a process of repetition changed the guesses of an earlier into the traditions of a later age. Like all folklore, such stories have a living interest to the student of psychology, but are of far less importance in the comparative study

of religion. It should be added that, though the common derivation of Deluge stories from the Bible Deluge can no longer be maintained, the Bible story and those related to it have had in various ways a wide and important influence upon a large number of them.

V. Groups of Deluge stories.—A. SEMITIC.—The Semitic Deluge story is found in three forms: (i.) that of the Akkadian tablets, (ii.) the Bible Deluge, and (iii.) the story as narrated by later Babylonian historians, esp. Berossus. It is now generally recognized by scholars of different schools that (i.) represents the most ancient form of the story, of which (iii.) is merely a variant, while (ii.) is a very different version of the old story adapted to an altogether different conception. The grounds on which this opinion is based are: (1) the belief that, though the date of the inscription upon the Akkadian tablets is probably about 660 B.C., it is a copy of a poem dating from at least 2000 B.C., as is confirmed by the mutilated fragment of another Babylonian Deluge story, discovered by Scheil at Abū Habbah (Sippara), the colophon of which points to a date for the inscription of 2250–2150 B.C. (see Ball, p. 43); (2) that the tablets belonged, roughly speaking, to the country from which the Israelitish people migrated; (3) that the story itself, in both its Biblical and Akkadian forms, is connected more nearly with the same region of the world than with Palestine (note the mountains of Nizir [Akkadian], Ararat [Bible]); (4) that the Akkadian story is based on the religious ideas of that country and the worship of the ancient gods of Babylonia, while that of Genesis is conceived in the spirit of the high morality and monotheism of the Jews.

i. THE AKKADIAN DELUGE STORY.—The Akkadian Deluge story, discovered by George Smith in 1872 among some monuments in the British Museum, was inscribed on the eleventh of twelve tablets, each containing one canto of an ancient epic poem. Each tablet is connected with a sign of the zodiac, and, as the eleventh is that corresponding to Aquarius, the Deluge story is particularly suitable.

The epic relates the adventures of a certain Gilgames, who is frequently identified by scholars with the Nimrod of Genesis. In order to seek a remedy for sickness, he pays a visit to his ancestor Šitnapišti (Nuhnapishtim [Ball]) at the mouth of the river Euphrates, and Šitnapišti gives him an account of the Deluge and of his own translation, of which the following is an abstract:

The gods in Šurippak, even then an old city, determine to send a Deluge. Ea, the lord of wisdom, reveals their purpose to Šitnapišti, and bids him build a ship of certain dimensions, there bring the seed of life, and launch it. Šitnapišti carries out these instructions, building it 120 cubits (7) high, of six storeys, and divided into seven parts, pouring over it several measures of 'pitch' both inside and out, and providing it with oars. Having celebrated a great sacrificial feast with oxen and sheep, beer, wine, oil, and grapes, he brings into the Ark stores of gold and silver, beasts of the field, man-servants and maid-servants, and the sons of his people ('all the craftsmen' [Ball]). Having done so, Šitnapišti is bidden to enter and shut the door, and to await the Deluge that night. He appoints Buzur-sadi-rabi (Smith and Sayce ['Buzur bel,' Haupt and Ball]) his pilot, and waits in dread for the storm, which bursts forth next morning. The description of the storm and the consternation of the gods are thus graphically and forcibly described (87–111):

'When the first light of dawn appeared,
There arose from the fountain of heaven a black cloud;
Rimmon in the heart of it thunders, and
Nebo and Merodach march before;
The Throne-bearers march o'er mountain and plain.
The mighty Dibbarra (or Girra) wrenches away the helm;

Ninib goes on pouring out ruin.
The Anunnaki (earth-spirits) lifted torches;
With their sheen they lighten the world.
Rimmon's violence reacheth to heaven;
Whatever is bright he turneth to darkness.

One day the Southern blast . . .
Hard it blew, and . . .

Like a battle-charge upon mankind rush [the waters].
 One no longer sees another;
 No more are men discerned in (descried from) heaven.
 The gods were dismayed at the flood, and
 Sought refuge in ascending to highest heaven (*lit.* the heaven
 of Anu);
 The gods cowered like dogs; on the battlements [of heaven]
 they crouched.
 Ishtar screams like a woman in travail,
 The loud-voiced Lady of the gods exclaims:
 "Yon generation is turned again to clay!
 As I in the assembly of the gods foretold the evil.
 A tempest for the destruction of my people I foretold.
 But I will give birth to my people [again], though
 Like fry of fishes they fill the sea."
 The gods, because of the Anunnaki wept with her;
 The gods were downcast, they sate a-weeping;
 Closed were their lips' (Ball, p. 381).

For 6 days and nights the storm rages, and abates on the
 7th, when the waters begin to subside. Šitnapīšti weeps at the
 sight of the corpses; he opens the window, however, and dis-
 covers distant land. Thither the ship steers, and grounds
 on Mt. Nizir. Here, after another 7 days' interval, Šitnapīšti
 sends forth a dove, which finds no resting-place, and returns.
 He then sends forth a swallow, which finds no resting-place, and
 returns; then a raven, which, when it sees that the waters have
 subsided, returns not. He then sends forth the animals to the
 four winds of heaven, builds an altar, and offers sacrifices with
 libations of wine, at which the gods collect like flies (?), while
 the great goddess Ištar lights up the mighty bow (?).¹ The
 account goes on to describe how, when Bel sees the ship, he is
 filled with anger, and commands the gods that no one shall
 come forth alive. Ea expostulates with him for having caused
 a Deluge, and suggests in future other punishments, such as
 wild beasts, famine, or plague. He declares that he did not
 reveal the counsel of the gods, but only sent a dream to Atra-
 hasis. His pleas are so successful that Bel takes Šitnapīšti's
 hands, and blesses him *and his wife*, and bids them be as gods,
 and dwell at the mouth of the rivers.

Unfortunately, there are a large number of
lacunæ, and in many other passages the language
 is very obscure; but the above may be taken as
 fairly representing the general drift.

There can be little doubt that the text as we
 have it is composite (see Sayce, *Higher Crit. and*
Mon. ch. iii.). The Deluge is ascribed first to the
 gods of Šurippak collectively, then to the sun-god
 (Samaš), and, lastly, exclusively to Bel. The hero
 of the Deluge is twice called Atrahasis instead of
 Šitnapīšti. Moreover, a double version of Ea's
 warning speech is given, and, lastly, Bel's counsel
 to stop Šitnapīšti, etc., from leaving the ship is
 clearly out of place after the sacrifice just recorded.
 However precarious it may be, and indeed unneces-
 sary, to attempt an exact analysis of the whole, it
 is of some importance to realize that the Deluge
 story was a popular one, and even in Babylon was
 told in various ways. We have at least evidence
 of one story in which Šitnapīšti is presumably
 the hero, ending in the sacrificial thank-offering,
 and another in which, after a quarrel among the
 gods, the hero Atrahasis is translated. In addition
 to the Akkadian Epic here given, a few other frag-
 ments have been found containing more or less
 divergent versions of the same story. The most
 important of these—that discovered by Scheil, al-
 ready referred to—consists of 37 lines. It repre-
 sents some god as calling upon Rammān to bring a
 flood on the earth, and Ea as interposing to save
 Atrahasis (see Driver, *Genesis, in loco*; Ball, p. 43).

Before passing on to consider the Bible Deluge,
 we must call attention to a few points in the Ak-
 kadian story. (1) The recurrence of periods of
 seven days' duration. The preparations appear
 to have taken 7 days (cf. Gn 7⁴ [J]), the ship being
 completed on the 5th, and 2 days more being re-
 quired for the sacrifice and embarkation. The
 storm itself lasted 7 days, and there was another
 interval of 7 days, while the Deluge was abating,
 before sending out the birds, which were sent out
 consecutively, apparently on the 7th day, or, at
 any rate, at no great interval (cf. the story of
 Berossus, 'after some days').—(2) The dimensions

of the ship are uncertain. There are *lacunæ* in the
 inscription where the directions are first given, but,
 at any rate, the height and breadth are the same.
 In describing the actual building of the ship, the
 height (and, therefore, the breadth also) is 10 *sars*
 (120 cubits [Sayce, Hommel]), but the length is not
 given. It was, therefore, enormously larger than
 the Bible Ark—4 times the height and over twice
 the breadth (cf. Gn 6¹⁵ [P]).—(3) Those saved in the
 ship included Šitnapīšti, his wife and slaves (male
 and female), and the pilot and all his people; but
 the mention of other relatives is at least doubtful.
 —(4) Most important of all: Atrahasis and his wife
 (but no others) are translated.

ii. THE BIBLE DELUGE STORY.—1. *Analysis*.—
 The Bible Deluge story, like the Akkadian, is cer-
 tainly composite, parts belonging to the compara-
 tively late Priestly Code (P), and parts, speaking
 generally, to the ancient Jahvist source (J).

The parts usually assigned to J* are: 6⁵⁻⁸ 7¹⁻⁵ 7-10
 (in part [see below])¹² 16⁵ 17-4 22-23 82b-2a. 6-12 12b. 20-27.

The parts usually assigned to P are: 6⁹⁻²² 7⁶ 11.
 12-10a. 18-21. 24 81. 2a. 30-5. 13a. 14-19 91-17.

2. *The J Deluge story*.—(a) *Its date*.—Though
 the composition of J as a whole can hardly be
 earlier than the 9th cent. B.C., it seems probable
 that the Deluge story in its Hebrew form, though
 not necessarily reduced to writing, is far older. It
 preserves, at any rate, what appears to be a very
 ancient custom, not otherwise known, by which
 all clean animals were regarded as suitable for
 sacrifice (Gn 8²⁰), whereas, according to Dt 12¹⁵ 23
 15²², there is clearly a distinction intended between
 certain domestic animals that were sacrificed and
 wild game (*i.e.* clean animals) which it had been
 the custom to eat, but which could not be sacrificed
 —a distinction which is also implied in the story of
 the deception of Isaac (Gn 27 [JE]).

On the other hand, the Deluge was not a uni-
 versal tradition among the Israelites, or, at any rate,
 did not form part of a generally recognized his-
 torical system. The tradition concerning Lamech's
 sons (Gn 4¹⁹⁻²²) implies an unbroken history of civi-
 lization; and, if the writer of this last section was
 aware of the Flood tradition, he certainly did not
 regard it as a universal Deluge. Many critics,
 therefore, regard the Deluge story as a compara-
 tively late insertion into the original cycle of J
 traditions (see *Oxf. Hex.*, *in loco*).

(b) A relation of some kind between J and the
 Akkadian story is evident. The chief points of
 similarity are the Divine decision to bring about a
 Flood (Gn 6⁵⁻⁷) in consequence of man's sin (this
 is implied in Ea's expostulation with Bel in the
 Akkadian story); the warning by Divine agency
 that the Flood was coming (7⁴); the command to
 build an Ark, implied in 6⁸ 7^{1a}; the periods of 7
 days, though not so connectedly as in the Akkadian
 story (7⁴ 10 8¹⁰ 12); the sending out of birds at
 intervals; the sacrifice after the Deluge, and the
 delight shown in it by Jahweh (8²⁰ 21). On the
 other hand, it differs in the monotheistic character
 of the whole story, and the necessary omission of
 the petty quarrels of the gods; and in its infinitely
 higher religious and moral tone (the occasion of the
 Flood, Jahweh's wrath against man's sin, receives
 an emphasis which we do not find in the Akkadian
 story); the means of preservation, an ark or chest,
 instead of a ship; ‡ the Flood's duration of 40 days
 instead of 7; the birds sent out—raven, dove, dove,
 dove, instead of dove, swallow, raven; the incident
 of the olive branch (but cf. Berossus); and the
 omission of the apotheosis of Noah.

* For full analysis, see *Oxford Hex.*; Kautsch and Socin (quoted
 in Usener, pp. 17-22); Driver, *Genesis*, 1904.

† Some assign v. 17^a (afterwards corrected by redactor) to P.

‡ Ball argues from the dimensions that the Akkadian ship
 was really a chest; but it had oars and a steersman, and was
 launched and navigated.

¹ 'She lifted up the Great Gems' (Ball, p. 40, who explains:
 'The Babylonian myth evidently regards the rainbow as the
 great jewelled collar of Ishtar, held up arch-wise in heaven'
 [see also p. 201]).

(c) At this point two important questions arise. (1) Is the Bible story derived from the Akkadian, *as we find it in the tablets*? Probably not. That there were several versions of the story current in Babylon is clear from the evidence of two stories combined in the Akkadian tablets, and by the evidence of the other mutilated fragments, as well as by the account of Berossus, which differs in some important particulars. The olive branch in the dove's mouth is the kind of picturesque detail which looks very ancient, and may have been original, and is to some extent confirmed by Berossus (see below, V. A. iii. 1, b, c). It has been suggested that the sending out of birds may have originated in the well-attested ancient custom of letting birds loose to ascertain the direction of land; but, while this is not altogether improbable, it must be admitted that such a purpose is not very evident in the Akkadian story, and is quite inadmissible in that of the Bible. On the whole, it would appear that the Bible story is derived from one that did not differ essentially from the Akkadian as we know it.

(2) Is the story of J a deliberate paraphrase of whatever form it was derived from, or was it the result of a gradual process of development? The subject is hardly capable of positive proof, but the probability seems in favour of the latter alternative. (a) If the story was, as seems likely, derived from Babylonia at an early date (note its anthropomorphic conception of Jahweh, Gn 7¹⁸ 8²¹), it would, in all probability, have been handed on by oral tradition many centuries before it was written down, and, if so, would naturally have become gradually changed in the telling, as religious ideas developed from time to time. (b) We can thus best account for one of the most characteristic differences—the chest of the Bible left to drift by chance or at the Divine will, in the place of the purposely navigated boat of the Akkadian story. No doubt Lenormant was right in saying that the latter is a feature suitable to the story as told by a maritime people, such as the inhabitants of the Persian Gulf, whereas the Bible Ark points to a people wholly ignorant of navigation (*Orig.* i. 408, quoted by Andree, p. 8); but it seems unlikely that a writer in comparatively late times would have deliberately altered the ship into an ark, whereas such a change might naturally have come by degrees. Some writers have urged this difference as a proof of the priority of the Bible narrative; and even Cheyne, while very far from admitting such a view, suggested that possibly this particular feature may be more primitive—the conversion of the chest into a ship being due, if this be the case, to a rationalizing tendency (art. 'Deluge,' in *EBR*⁹). But such an argument cannot be considered as to any extent outweighing the strong grounds for the priority of the Akkadian story; and, after all, that the Bible Deluge should be in this, as it is in other respects, more marvellous than an early form of the story, is what we might naturally expect in a later stage of tradition.

(d) *Conclusion.*—We probably have in the J story a very early Israelitish tradition, either brought with the people from Babylonia at their first immigration, or obtained from that country through the frequent intercourse which we know to have existed from early times between the two peoples, but so modified as to have become, in the gradual course of transmission, a suitable vehicle for enforcing those great moral and religious truths which became the distinguishing features of the Israelites.

3. *The P version of the Deluge.*—(a) Compared with that of J, P has in addition the description and the dimensions of the Ark, the description of the Deluge as due to the breaking up of all the

fountains of the great deep, as well as the opening of the windows of heaven (7¹¹ 8²), the stranding of the Ark on Mt. Ararat (8⁴), and the rainbow (9¹³⁻¹⁶), together with statistical references to Noah's age, etc. P omits the sending out of animals and the post-diluvian sacrifice, substitutes one pair of all animals for 7 pairs of clean and one of unclean, makes the Deluge last 365 days instead of 61, and substitutes the elaborate covenant connected with the rainbow (9¹⁻¹⁷) and laws of blood for the simple promise of J based on the sacrifice (8²⁰⁻²²).

(b) The comparison with J and with the Akkadian Deluge raises a somewhat difficult question. Was P's story derived independently from Babylon during or shortly after the Exile, or was it, on the other hand, merely a revision of J's Deluge story; or, again, was it in some respects an independent version of the ancient story, belonging, like J's account, to ancient religious traditions?

Those who adopt either the first or third of these alternatives lay stress on the fact that so much of what is peculiar to P has its parallels in the Akkadian story, in which we find certain dimensions of the ship, its being tarred with pitch, the Deluge ascribed apparently to the sea as well as the rain-storm, and the rainbow (Sayce, Ball). But, on the other hand, it may be observed (a) that, as already pointed out, the actual dimensions of the Akkadian ship are enormously greater than those of P's ark, and, moreover, that the insertion of exact dimensions is exactly in accordance with the custom of P, as, e.g., in the dimensions of the Tabernacle and all its furniture; the resemblance, therefore, on this point, such as it is, may be merely accidental; (b) that the reference to the rainbow in the Akkadian story is at least doubtful, and is not admitted by several translators (e.g. Haupt); (c) that almost all the differences between the accounts of P and J may be explained by the general character of P; e.g., the picturesque story of the birds would have no interest for P, who omits all the most picturesque stories of Genesis. In any case, such an incident would be unsuitable in a Deluge which covered the highest mountains (7¹⁹) and lasted 365 days, though not in one of 61, in which the mountains were not necessarily covered at all. Again, the omission of the sacrifice of Noah accords with the omission of all the Patriarchal sacrifices—an omission which certainly suggests the inference either that P disbelieved in or held of no account sacrifices which preceded the law of Sinai. The omission of 7 pairs of every kind of clean animal is very possibly an example of the same spirit, as these animals were, according to J, intended for sacrifice (8²⁰). Lastly, the omission of such an anthropomorphism as 'Jahweh shut him in' in 7^{16b} is quite in character with P's usual practice. (d) As the present combined account of the Deluge is based on P's story, which appears to have been preserved almost intact, whereas some parts of J are obviously omitted (those, for instance, giving the warning of the Deluge and directions for building the Ark), it is quite possible that some general statement of the Ark's dimensions, a description of the pitch, rooms, etc., like the Akkadian story, and the incident of the rainbow, may originally have had a place in J's story. If this be so, P must have retained the latter, not because of its picturesque quality, but as the basis for a favourite theme, a Divine covenant (cf. 6¹⁸); on the other hand, the change of 61 to 365 days, the number of days in the solar year, though it does not agree with the three weeks of the Akkadian story, appears to be based upon some astronomical theory, and may be due to Babylonian influence of some kind. It may also be reasonably urged that the reference to 'the fountains of the great deep' really corresponds with P's ideas and nomenclature (cf. Gn 1²), and finds a

parallel in the post-exilic Is 24¹⁸. It is not likely, therefore, that it was originally derived from J.

It may, then, be considered not improbable that, in addition to J, P may have had access to some other version of the Akkadian story, but, if so, when and how it was derived is quite uncertain.

iii. THE DELUGE ACCORDING TO LATER BABYLONIAN ACCOUNTS.—1. *The story as given by Berossus.*—Berossus was a priest of Bel in Babylon about 300 B.C., who wrote a history of Babylonia (see art. BEROSSUS). He claims to have copied out MSS of several authors which had been carefully preserved in Babylon for 15 myriads of years. Unfortunately, only a few fragments of his work have been preserved, which were copied by later authors. His Deluge story is given or referred to in three sources.

(a) It was copied by Alexander Polyhistor (a Milesian writer of the 1st cent. B.C.), whose work is also lost. Thence it was copied by Eusebius in his *Chronicon*; and, though the original of the *Chronicon* is also lost, it still exists in an Armenian tr., and it was also reproduced, probably *verbatim*, by Syncellus in his *Chronographia*.

(b) A Latin translation, based partly on the Armenian version, with the various readings of the Greek text of Syncellus, is given in Migne, *Chron. Eus.* I. ch. iii. (see also Müller, *FHG* ii. 501). It runs as follows:

'After the death of Ardates, his son Xisuthros reigned 18 sars (18x3600 years). During his reign occurred a great flood, of which the following account has been given. Kronos appeared to him in a dream and revealed to him that on the 15th of the month Daisios men would be destroyed by a flood, and he therefore ordered him to bury all existing MSS, beginning, middle, and end, in the sun-city of Sippara, to build a boat, to embark with his relatives and friends, to load it with food and drink, to put therein animals, birds, and quadrupeds, and to make all ready for a journey. He then asked whither the boat should go, and was told, "To the gods to pray [i.e. having prayed] for good to mankind." He was not disobedient, but built a boat of 5 stadia long and 2 stadia broad, and carried out all that had been commanded him, and embarked with wife, children, and relatives. When the flood came, and very soon had begun to subside, he let go some of his birds; but, when they found neither food nor place to settle, they came back to the ship. Xisuthros, after some days, let the birds go away again, and they returned to the ship with mud upon their feet. When they were let go for the third time, they returned no more to the ship. Then Xisuthros perceived that the land had appeared, and he broke open some of the joints of the ship, and ascertained that the ship had grounded on a certain mountain. He stepped out with his wife and daughter and the pilot, kissed the ground, erected an altar, offered sacrifice to the gods, and vanished together with those who had come out of the ship.' The narrative goes on to relate how a voice from the sky informed the comrades of Xisuthros that he and those with him had gone, on account of his piety, to dwell with the gods, and bade them recover the MSS, and adds in conclusion: 'Of this ship that stranded in Armenia a part still remained in the Kordyaean mountains of Armenia, and some people scraped off the pitch from the ship and used it as amulets. They came to Babylon, dug up the MSS, and took them from Sippara; and they rebuilt Babylon, building many cities and re-founding temples.'

(c) This story appears to be an epitome of the Akkadian or one much like it:

(a) The name of Xisuthros (=Hasis-atra transposed from Atra-hasis) agrees with that of one of the versions of the Akkadian story. (b) The means of refuge, as in the Akkadian story, is a ship and not an ark. (c) As in the Akkadian, Xisuthros and others are immortalized. It differs, however, in (a) the prediction of the exact date of the Deluge, (b) the specific mention of relatives and friends as saved (a smaller number seems implied than in the Akkadian story), (c) the mud on the feet of the birds, (d) the stranding of the ship in Armenia, and (e) the apotheosis not only of Xisuthros and his wife, but also of his daughters and even of the pilot. Of these (c) and (d) are of special interest. The latter would seem to prove an ancient origin of the story, independent of the Akkadian story, as the name of the ship being the regular name of Armenia in Assyrian monuments. Of the former it may be said at least that the story of the clay on the feet of the birds looks like the earlier analogue of the olive branch.

It should be added that the points of contact with the Bible story are not sufficiently striking to make it likely that the later Babylonian traditions were influenced by it. On the whole, then, the story of Berossus tends to confirm the view of

some variety in the Babylonian traditions of the Deluge.

2. *The Deluge story of Abydenus.*—An epitomized version of the same account, derived originally either from Berossus or from the source from which he derived it, comes to us through Abydenus, a later Babylonian historian, whose work, like that of Berossus, has also been copied both in the *Chronicon* of Eusebius (I. vii., also in *Præp. Evang.* ix. 12, p. 414) and in the *Chronographia* of Syncellus (p. 70).

It differs, however, (a) in making a double interval of three days before and between the sending of the birds, and (b) in the birds being sent only twice. Migne's attempt to get out of the text of Syncellus a third sending is hardly successful. At best it would require that it took place after they had returned with the clay.

3. *Reference to Berossus's Deluge story in Josephus.*—Josephus's account of the Deluge (*Ant.* I. iii. 5, 6) differs slightly from that of the Bible. He mentions that Noah, when the Ark rested on the top of a certain mountain of Armenia, opened it and saw a small piece of land. The dove was sent out 7 days after the raven, and only once returned, covered with mud and bringing an olive-branch. After waiting 7 days more, he sent forth the living creatures. These differences may be partly due to carelessness and to narration from memory, but the reference to the clay, at any rate, is taken from the account of Berossus, which he had seen, and probably other accounts also, for he goes on to say: 'All writers of barbarian histories make mention of this Flood and this Ark, among whom is Berossus the Chaldean,' and he quotes from him the statement about the remains of the ship on the Kordyaean mountains, and the use made of the pitch, in the same words as those used by Eusebius and Syncellus, who themselves refer to Polyhistor as their authority. This proves beyond a doubt that Polyhistor's story was derived from Berossus. Josephus's statement about the universality of the Deluge story may be taken as showing at least that the Deluge story was a common theme among ancient historians.

iv. ORIGIN OF THE SEMITIC DELUGE STORY.—(a) There is nothing to suggest in this case that it formed part of a consistent mythological system. (b) Being concerned with rain and water, the subject was clearly suitable for treatment in the Akkadian Epic in connexion with the rainy month; nor need we suppose it, therefore, connected with any special astronomical theories. (c) Its more or less mythological form, in which gods and goddesses play their part, finds its analogies in many Deluge and other stories throughout the world, in which natural events form the basis of, or become mixed up with, mythological details (see above, IV. C. (b)). (d) The frequency of Deluge stories arising out of natural inundations gives a *prima facie* probability that such an event was the origin of the tradition in this instance. (e) In both the Bible story and the Akkadian the Deluge is ascribed to natural causes: (1) an excessive rainfall; (2) somewhat more indefinitely, the rising of the sea. The first is obvious in both accounts. The second is definitely stated in P in the words 'all the fountains of the great deep were broken up' (Gn 7¹¹). The deep being regarded as being under the earth, such language would very naturally suggest an earthquake breaking up the ground and letting the deep burst forth. It seems implied also in the Akkadian story, which, if it does not, as some scholars maintain, expressly speak of the earth trembling, and the floods breaking out below the earth, at least describes such a terrific storm and tempest and invasion of waters as to imply a cyclonic wave rather than a mere overflowing of rivers. (f) The traditional resting-places of the ark, Ararat=Armenia (Bible

and Berossus), and Nizir = Rowandiz in the North-East of Babylonia (Akkadian), point to a definite region of the world. (g) Süß has pointed out with great force that the necessary conditions are fulfilled by supposing that the shores of the Persian Gulf were struck by an enormous volcanic wave, accompanied by a tremendous cyclone. The very great distance which such waves travel, and the fearful destruction of life and property which is often involved, have frequently been pointed out.

Thus the wave associated with the Backergunge cyclone in the delta of the Ganges reached a height of 45 ft. and destroyed more than 100,000 persons (*EB*⁹ xvi. 155). A wave caused by the eruption of Krakatoa (20th-23th Aug. 1883) reached 50 ft. (cf. the 15 cubits of P. Gn 7²⁰) and destroyed more than 86,000 lives. One wave reached as far as Cape Horn, 7818 geographical miles distant (*EB*⁹ xxviii. 639).

It can hardly be deemed improbable that a phenomenon of such a kind occurred on the coast of the Persian Gulf, then probably lying much further north than now, and that but few survivors escaped in boats to the more hilly regions, with what effects they could secure. We have, in an event like this, all that is needed for the growth of such stories as are preserved in the Akkadian Epic and the Bible Deluge.

It need hardly be added that the religious value of the Bible story does not lie in its improbabilities, which sometimes amount, as has been shown, to absurdities, but rather in the religious and moral lessons, of which the ancient tradition was made the vehicle, viz. that Jahweh hated and would punish sin, but would save those who were faithful and obedient, while the further thought is suggested in P, at least, that His mercy is a more abiding motive than His wrath.

B. THE GREEK DELUGE STORIES.—i. *Story of Deukalion and Pyrrha.*—This is by far the most important of the Greek Deluge, or Flood, stories. (a) Its most typical form is that given by Apollodorus (140 B.C.) in his *Bibliotheca*, I. vii. 2:

When Zeus determined to destroy the men of the age of copper, Deukalion, at the suggestion of Prometheus his father, constructed a chest (ἀρνυκτα), into which, having placed therein the necessities of life, he entered with his wife Pyrrha. Zeus sent a great rain, which flooded most parts of Greece, and destroyed all except those who escaped to the neighbouring hill-tops. The pair, after drifting in the chest for 9 days and nights, reached Parnassus, and, the Flood having somewhat abated, disembarked, whereupon Deukalion sacrificed to Zeus his protector. The latter sent Hermes to ask what he wished. He replied 'Children.' At the direction of Zeus they threw stones over their heads, and those which Deukalion threw became men, and those which Pyrrha threw, women. Then follows a derivation of the word *laos* ('people') from *laas* or *laē* ('stone').

(b) This story evidently originated in a confusion of a myth with what may have been an ancient tradition. If Pandora, as Apollodorus had just asserted, was the first woman, and Prometheus first made men of earth and water, how could Deukalion be, as Apollodorus likewise states, king of Phthia, and who were the men who were nearly all destroyed? How, again, is the survival of any consistent with the story of the stones?

(c) (1) There seems to be an allusion to the story of the stones in Hesiod ('*Hōiai*, fr. 141, ed. Rzsch; see Usener, p. 32). (2) The earliest complete reference, however, to Deukalion's Flood is in Pindar, *Ol.* ix. 64-67, where he mentions how Pyrrha and Deukalion descended from Parnassus and founded of stones a race like themselves, and how the mighty waters which had overflowed the earth had been suddenly stopped by Zeus. Pindar evidently refers to it as a well-known story; otherwise, much of what he says would have been quite unintelligible to his readers. (3) The best-known form of the story, however, is that given by Ovid, *Met.* i. 155-415, the most curious feature of which is the fact that no mention is made of Deukalion and Pyrrha having been warned of the Deluge and commanded to build a ship. They appeared on the heights of Parnassus, where they had landed, and

invoked the gods of the mountain and Themis. Zeus, seeing this, and satisfied that they were good and pious people, stopped the Deluge. A full description is given of their trouble, and the story about 'the bones of the great mother' is given in detail. It should be noticed that here the means of refuge is a ship, not, as with Apollodorus, a chest. There are also several other more or less different versions of the Deukalion story. (4) According to Nonnus (see Usener, p. 38), a conflagration sent by Zeus (in anger at the Titans for murdering Dionysus Zagreus) was put out by a Deluge. This is very abruptly connected with the story of Deukalion and Pyrrha, who suddenly appear floating about in a chest (ἀρνυκτα); but we are not told how or where they got in, or where they landed. The Deluge ends by Poseidon splitting the rock with his trident, and making an escape for the water through the Vale of Tempe, thus connecting the Deluge with the north of Thessaly, whereas the older legends connect it with Photis in the south-east. (5) According to Hellanikos, Mt. Othrys was the place of landing. Aristotle, curiously enough, maintained that the waters of the Deluge flowed into Achelous. Others, such as Thrasybulus and Akestodorus, maintained that Deukalion and Pyrrha founded the sanctuary of Zeus at Dodona, and dwelt in the territory of the Molossi. Possibly here we have a local Flood tradition combined with the better known traditional story. Very late legends connect the landing of Deukalion with Mt. Athos, and even with Aetna.

ii. *Other Deluge stories current in Greece.*—1. According to a legend connected with Megaris, Megaros, its founder, was rescued from the Deluge, being guided in swimming through the water by the cry of cranes; hence was derived the name of Gerania.

2. The Oxygian Flood story, found only in quite late writers, such as Julius Africanus, is confined to Boeotia and Attica. Oxygos, its hero, was described as king, sometimes of Athens and sometimes of Thebes.

3. Dardanus was said to have escaped in a Flood from Samothrace or Arcadia (Dionysius of Halicarnassus), in a boat of skins made by himself (Lykophron), or with his sons, and to have founded the kingdom of Ida. This story was often brought into connexion with that of Deukalion.

4. An altogether different Flood story is referred to by Istros (see Usener, p. 46), who connects a great flood with the severing of Asia and Europe by the Hellespont.

iii. *Origin of the Greek stories.*—Speaking generally, the Greek Deluge stories form good illustrations of what appear to be the common causes of such legends (see above, IV. C). Several of them grew up as explanations of the founding of a city or temple, ascribed to a waif miraculously guided across the waters, and to this extent Usener is probably right in finding analogies to the Deukalion myth in such stories as those of Persens and Oedipus. Other Greek Deluge stories are connected with special geographical features, such as the opening of the Vale of Tempe. All are local in character, and that one of them, from its antiquity and picturesqueness, should have found a permanent place, though often mixed with others, in Greek mythology is natural enough. And there is no reason why it too may not have originated from a local inundation, the story receiving such accretions of the picturesque and marvellous as are common in similar cases.

The occurrence of the chest instead of a boat is interesting in view of the same variation in the Semitic story, and might suggest the possibility that the Greek legend, as we find it in Apollodorus, was influenced in some indirect way by the Bible narrative. But there is a great difference between a chest,

holding only a couple of persons and such food as they required for 9 days, and the monster Bible 'Ark' with all its arrangements and contents. Moreover, the chest was not an uncommon feature in the wait stories of Greek legend.

iv. *The mixed Deluge story of the pseudo-Lucian.*—We have a real mixture of the Greek and Semitic Deluge stories in the story given in the *de Dea Syria* (Lucian, ed. Jacobitz, Leipzig, 1881, iii. 344 f.). This version was connected with a hole in the ground over which the temple was built and into which the Deluge was said to have subsided.

According to this account, Deukalion, and his wife and children, were saved in a great chest (ἀράνη). As he entered it, there came all kinds of animals, wild and tame, cows, horses, serpents, lions, etc., in pairs. He received them all, and there was great friendship between them, and they all sailed in one chest as long as the water prevailed. When the water had disappeared through the hole, Deukalion built an altar and the temple over it.

Usener certainly goes too far in saying that this is the Babylonian Deluge story with only the name Deukalion inserted from Greek legend. It contains several features from both, and, except that to Deukalion it gives a second name *Ἐκδοῖα* (which, according to Buttman, is a corruption of *Σισυῖα*, and is intended for Sisuthros, the Noah of Berossus), it bears a far closer resemblance to the Biblical than to the other forms of the Babylonian Deluge legend. *E.g.*, wild animals are preserved as well as tame; in pairs; only Deukalion and his family escape; in a chest, not a boat (the last perhaps from the Greek story). That traditions of the Deluge ultimately derived from the Bible should have been current in Syria is likely enough, and there seems also evidence, in another tradition that the people was founded by Semiramis, of early intercourse with Babylon.

C. *PERSIAN DELUGE STORIES.*—i. A curious legend is contained in two fragments of the Yima songs preserved in *Vendidad* (*SBE* iv. 10 f.). It is given in full by Usener, pp. 208–212, from the critical tr. of Geldner.¹

A council was held by the gods, in which Ahura Mazda decreed that a terribly severe winter would be followed by a great Deluge from the melting of the snow. Yima was directed to build an enormous fort foursquare, and to stock it with men and animals of all kinds. Yima carried out these instructions, but it is not actually said that the Deluge came.

Usener regards the whole story as an ideal picture of the future, the eternal city where men are to live in harmony and righteousness a life free from moral and physical evil, when the world is destroyed by the Deluge; but the passages which seem most ideal are among the prose portions, which Geldner regards as later insertions. It seems more probable that we have here also an example of the tendency to idealize what was originally a natural event.

ii. A second story is found in *Bundahišn*, vii. (tr. by E. W. West in *SBE* v. 25–28). Tištar, in the three forms of a man, a horse, and a bull, sends successive Deluges each of ten days' duration, and destroys all the noxious creatures on the earth. This is part of what is clearly an astrological myth describing the contest between good and evil, and accounting for lightning and thunder, the salt sea, and the origin of lakes and seas.

D. *INDIAN DELUGE STORIES.*—i. *The Fish Legend.*—(1) The oldest form of this typical Deluge story of India is preserved in the *Satapatha Brāhmaṇa*, i. 8. 1 (*SBE* xii. 216, tr. by J. Eggeling; for other translations see A. Weber, *Ind. Streif.*, 1868, i. 9, *Ind. Stud.*, 1868, i. 161; Max Müller, *Hist. Skr. Lit.*, 1859, p. 425; J. Muir, *Orig. Skr. Texts*, i.² [1873] 181 ff.):

In the morning, Manu, when water was brought to him for washing, found a fish in his hands. The fish foretold the coming Deluge, and promised to save him if he would preserve it, first in a jar, then in a pit, and when it had outgrown this, would take it to the sea. Manu was to build a ship, and enter it, and look out for his preserver. Manu did

as directed, and finally took the fish, which had then grown to an enormous size, to the sea. Then Manu entered the ship, and the Deluge came, which destroyed all living creatures. Meanwhile the fish approached Manu, who fastened the ship to its horn, and was so conveyed up to [or 'over'] the Northern Mountains. Manu was directed to tie the ship to a tree, and gradually to descend as the waters abate.

The rest of the story is concerned with a complicated and very unintelligible rite with clarified butter, by which a woman was first produced, and, by her means, offspring of men and cattle.

According to Weber, the final redaction of the *Satapatha* is only a little before the Christian era; but, as Eggeling shows, it is a compilation of earlier treatises, and this particular story gives the impression, in its main features, of being ancient.

One special interest in the story lies in its curious points of resemblance and contrast to other Deluge stories. The warning of the Deluge by an animal, the fastening of the ship by a rope, the post-diluvian sacrifice, and the miraculous reproduction of men, have all their analogies; but they are not found, as here, in combination, and the towing of the ship by a fish is quite unique. The probability is, therefore, that this legend is of native growth.

Weber and, to a less extent, Muir see in the story a tradition of an original immigration of the race from across the Himalayas. They base their opinion on a rendering of the words given above in italics, 'over the Northern Mountains.' Eggeling, however, renders 'up to,' and some writers suppose the story to have originated in an exceptional overflowing of the Ganges. The question is primarily one of textual criticism, the choice lying between the reading *abhi-dudrāva* (Eggeling) and *ati-dudrāva* (Weber, etc.). The chief argument against an originally mythical origin of the story is that here also the tendency is to become more and more mythical, and if we reverse this tendency we can easily explain the story as having grown out of a natural inundation.

(2) A second version of the Indian story is that given in the *Mahābhārata* (quoted from tr. by H. Jacobi in Usener, p. 29; see also Muir, *op. cit.* i.² 196 ff.). The story has here assumed a more elaborate and marvellous form.

Manu is a prince among monks, renowned for his asceticism. 'Standing on one leg with his arms raised on high, and with head bent down and never blinking an eye, he practised terrible austerities,' etc. The fish appeared to him as he was practising austerities by the shore. Of such virtue were they that the fish became many miles long, and yet Manu could carry it quite easily. The storm is very graphically described. In the end the fish reveals himself as Brahmā, and appoints Manu as creator of all things.

In this version there appears to be a confusion, not uncommon in similar myths, in the character of Manu as himself a descendant of former ancestors, and as the founder and creator of men and all things. In the older form of the story he is the first man, and never more than a man.

(3) A third version is found in the *Bhāgavata Purāṇa*, viii. 24. 7 ff. (for Eng. tr. see Hardwick, *Christ and other Masters*, new ed., Lond. 1863, vol. i. pt. ii. ch. iii. pp. 312–315; Muir, *op. cit.* i.² 208 ff.). According to Cheyne, this book cannot be earlier than the 12th cent. A.D. The story itself is mainly a development of that of the *Satapatha Brāhmaṇa*, with a mixture of the mythical and quasi-philosophical elements characteristic of the *Purāṇas*.

The Deluge took place during a sleep of Brahmā, when the strong demon Hayagrīva stole the Vedas. Hari took the form of a minute fish, and so finally revealed himself to Satyavrata, a devout king who lived only on water. The gradual growth of the fish is like that in the earlier legends, except that he outdid them by becoming, in his final form, a million of leagues long. The ark in this case was miraculously brought to Satyavrata, who, accompanied by the chiefs of the Brahmans, spent his time therein in singing hymns of praise and receiving Divine revelations. Finally, Hari slew Hayagrīva and recovered the Vedas. Satyavrata, instructed in all Divine and human knowledge, was appointed the 7th Manu. But, after all, the

¹ For a divergent interpretation of this Iranian material, see art. BLZST, ABOVE OF THE (Persian).

appearance of the horned fish was *māya*, or delusion, and 'he who shall devoutly hear this important allegorical narrative will be delivered from the bondage of sin.'

It is interesting to note that this version has several points of contact with the Bible story. (1) The Deluge is caused by rain as well as by the sea. (2) Seven days' warning is given of the Deluge. (3) It is sent because of the depravity of man. (4) Animals are preserved in the ark, (5) and these in pairs. Of these (3) is inconsistent with the beginning of the story, and is evidently an interpolation. The most probable explanation of them all is that they were due to Christian influence. Their appearance only in the latest version of the myth makes it impossible to use them as arguments to prove that the story itself is derived from the Bible story, or originated in the event which that story describes.

ii. *The Boar Legend*.—Another Deluge myth is given in Muir, *op. cit.* i.² 50f. It is one of the creation stories of the *Viṣṇu Purāṇa*.

It tells how the Divine Brahṃā, awaking from his night slumber, and perceiving that the earth lay within the waters of the universal ocean, assumed the form of a boar, plunged into the ocean, and raised up the earth and placed it on the surface.

This is a creation myth, and has a curious analogy with some of the American Indian stories (see IV. C (a)).

E. CHINESE FLOOD STORY.—Accounts of this are found in the *Shu King* (especially ii. 4. 1; cf. also pref. 5, ii. 1. 17, 2. 1, 14, iii. 1. 1, v. 27. 8), the *Shih King* (iv. 3. 4. 1), and the writings of Meng-tsze (iii. 1. 4. 7, 2. 9. 3f.).

i. According to the *Canon of Yāo* (*Shu King*, i. 3. 11, tr. Legge, *SBE* iii. 34f.),

'the T' said, "Ho! (President of) the Four Mountains, destructive in their overflow are the waters of the inundation. In their vast extent they embrace the hills and overtop the great heights, threatening the heavens with their floods, so that the lower people groan and murmur! Is there a capable man to whom I can assign the correction (of this calamity)?" Khwān was appointed, and laboured unsuccessfully for nine years. The T' afterwards resigned his throne to Yü, who had coped successfully with the inundation.

ii. The *Shu King* (ii. 4. 1) gives the account of Yü's work as follows (in Legge's translation):

'The inundating waters seemed to assail the heavens, and in their vast extent embraced the mountains and overtopped the hills, so that people were bewildered and overwhelmed. I [Yü] mounted my four conveyances [carts, boats, sledges, and spiked shoes] and all along the hills hewed down the woods, at the same time, along with Yi, showing the multitudes how to get flesh to eat. I opened passages for the streams throughout the nine provinces, and conducted them to the sea. I deepened the channels and canals, and conducted them to the streams, at the same time, along with Oh, sowing grain, and showing the multitude how to procure the food of toil in addition to flesh meat. I urged them further to exchange what they had for what they had not, and to dispose of their accumulated stores. In this way all the people got grain to eat, and all the States began to come under good rule.'

Elsewhere in the *Shu King*, Yü is repeatedly described as having determined the relations of land and water, and the *Shih King* declares that, 'when the waters of the Flood had become widespread, Yü caused the various regions of the earth world to appear: the great outlying realms received their limitations.'

According to these accounts, all these works were accomplished during a single journey. In fact, the accounts probably describe work gradually carried out through many ages, though possibly commenced by Yü. They were evidently intended to avert a constantly repeated and wide-spread disaster.

iii. *Origin of the story*.—Legge believed that the occasion of Yü's special work was an actual inundation of an alarming kind of the Hwang-Ho ('the sorrow of China'), which he puts in the 24th cent. B.C., whereas he ascribes this treatise to the 12th.

According to Meng-tsze (b. 372 B.C.), however, the tasks of Yü were carried out under far more difficult conditions.

'In the time of Yāo, when the earth was not yet in ordered state, the masses of water flowed unchecked and flooded the earth. Flora was excessively luxuriant, and birds and other living creatures went about in enormous quantities. Grain could not grow. Animals pressed hard on man. . . . Yāo alone concerned himself about this. He appointed Shün, who developed an ordering activity and gave Yi control of fire. Yi caused devastating conflagrations on the mountains and in the marshes, so that the animals fled and sought shelter. Yü divided the nine rivers. . . . Then it became possible for the folk of the Middle Kingdom to support themselves' (iii. 1. 4. 7). At this same period, moreover, serpents and dragons infested these deluging waters; but Yü, while appointing the rivers their courses, banished these monsters, the animals that had oppressed man vanished, and the plains of China became habitable for the human race (iii. 2. 9. 3f.).

It is by no means impossible that, as Legge held, these accounts all had their rise in a tradition of an extraordinary inundation by the Hwang-Ho; and in this connexion it is worthy of note that the great flood of 1851-53 is said to have cost some millions of lives, while it took 15 years to repair the damage and to confine the river within embankments. At the same time, it should not be forgotten that Grill, in his 'Zur chinesischen Flutsage' (*Festgruss an Roth*, Stuttgart, 1893, pp. 9-14), maintains that the story is based on a cosmogonic myth, devoid of connexion, even in its basal ideas, with the Bible account, and associated in form with experience of the frequent inundations of the Hwang-Ho; and, like von Gutschmid (*ZDMG* xxxiv. 192f.), he holds that Yü, to whom he denies any actual existence in history, was essentially a sort of demiurge, who helped to establish civilization on earth. It is open to question, therefore, at least on the basis of Meng-tsze's statements, whether this whole story is not to be regarded as a cosmogonic rather than as a Deluge story.

F. FOLKLORE DELUGE STORIES.—Under this general heading are included the numerous stories of peoples, mostly in a savage or semi-savage state, not included under previous headings. It is not necessary for the present purpose to make any general classification of them on either geographical or ethnological lines. It will be sufficient to point out a few facts bearing on the subject of this article.

i. One of the essential characters of these stories arises out of the fact that they are folklore. In the Deluge stories of Babylon, Greece, and India we have well-defined legends capable of being traced out more or less distinctly in their developments and ramifications. Though a few of the stories now under consideration have come to us in a written form more or less ancient, they are not literature in the same sense, but only stereotyped folk-tales. By far the greater number of these stories, however, are still, or were till recent years, in a fluid and formative condition. The imagination which has produced them is, or was till recently, still at work, and has been continually modifying them. It has already been noticed how both historical events and fancy-striking anecdotes, such as Bible stories, have in many cases become mixed with the early tale, nor is it possible to separate them with scientific accuracy. Not infrequently what is essentially the same story is differently told on different occasions, or at any rate is differently reported (Leeward Islands; see IV. A. vi. (d)).

ii. There are many difficulties in the way of getting trustworthy evidence. As already pointed out, the missionaries, by whom most of these stories have been reported, were frequently prejudiced witnesses (see IV. A. iii.), and, moreover, the stories in several cases were collected some time after the conversion of the people with whom they originated. These missionaries had to depend on their own memory or that of their converts, and it was only in quite exceptional cases that the

opportunity afforded to Gill was offered (see above, IV. C. (a)), of reporting from the evidence of one whose knowledge of heathen lore was both fresh and complete.

iii. Another striking fact is the irregularity in the distribution of these stories. For example, there are very few independent Deluge stories reported from Africa, a considerable number from the islands of the Pacific, and an extraordinarily large number from the continent of America. This is accounted for negatively by Andree on the ground that Deluge stories do not readily arise where, as in Africa, the inundation of the great rivers is an annual occurrence, which does not therefore impress the imagination. It may be noticed in this connexion that one of the most important exceptions is connected with a special local feature—the formation of the Dilolo Lake on the southern border of the Congo State (see Andree, p. 49). Again, the Deluge legend of the Masai in Uganda, to which attention has been lately called by Merker (see *Guardian*, 1906, p. 945), is so obviously parallel with the Bible Deluge that it cannot be regarded as independent. We find here the Ark, pairs of animals, birds sent out (a pigeon and a vulture [cf. the crow of the Lummi Indians and the humming-bird of a Mexican story]), and four (!) rainbows.

iv. It would appear that there must be some positive reason for the frequency of Deluge stories among the American Indians. George Catlin, in his *O-See-pa* (p. 2), stated that among 120 tribes there was not one which did not relate some distinct or vague tradition of a Flood, and, in fact, a very considerable number of these stories have been preserved. It certainly must be admitted that the idea of a Deluge impressed itself very readily on the Indian tribes, but how far this was due to their past experience as an island people, and how far to the psychological character of the race, is a question for the ethnologist or anthropologist rather than the student of comparative religion. This much at least can be said, that there is some reason for believing that several of these stories are of comparatively ancient origin.

(1) In the first place, there is abundant evidence to show that Deluge stories were current in Central and Southern America at the time of the Spanish occupation. (2) The common elements in the stories of neighbouring and related tribes in some cases point to an ancient tradition in which a characteristic feature has become rooted in the imagination. (a) Several of the tribes about Peru, though their Deluge stories differ widely in other respects, have the common feature of a floating mountain—a combination, it would seem, of the ark and the mountain of refuge. (b) In more than one Mexican legend men were turned by the Deluge into fish. (c) We have noticed that several tribes about the Orinoco and its neighbourhood have the common features of stones (or coco-nuts) thrown to produce men (see IV. A. v. (2)). (d) Of still greater interest is the curious feature already mentioned (IV. C. (a)) that land was produced after the Deluge, not by the water subsiding, but out of scattered grains of sand or earth springing up and growing like seeds. Thus in the story of the Ojibwas, after the loon has dived several times in vain, it is the musk-rat restored to life by the surviving Manabozho (who was standing up to his neck in water on the summit of a high tree) that dives and brings up the grains of sand between its toes. These Manabozho throws into the waters, and they grow into islands, which unite into mainland. In a story of the Sac and Fox Indians, another branch of the Algonquins, the survivor, seeing

that the Deluge would soon overwhelm the mountain on which he had sought refuge, built a canoe out of a piece of the blue sky. After sailing about some days, he sent out one of the largest fishes, which returned with its monster mouth full of earth, out of which he formed the dry land. In the story of the Chippewas (Montagnais), a related group, it is the northern diver that eventually returns to the canoe with clay on his webbed feet, after the beaver, otter, and musk-rat have failed. This the old man breathed upon, and it became a great island. (e) We find, again, in certain groups of tribes that a particular animal plays a prominent part, as the coyote among the Californians (Wappos, Papagos, etc.), the raven among those on the north-west seaboard of N. America (Thlinkits and Bella Coolas).

v. This prominence of animals is a very characteristic feature of the American Indian stories, and is by some believed to be connected ultimately with totem-worship, whereas in the stories of some other groups, such as those of the South Sea Islanders, a greater prominence is given relatively to what we should call the wonders or powers of Nature. Thus, according to Bancroft (iii. 87), the Californians describe themselves as having originated from the coyote.

Among the Algonquin tribes the black serpent is the enemy of man and of created beings, and sends the Deluge. Manabozho, in more than one story of this group, takes refuge on the turtle's back. In the stories of the Ojibwas his helper is usually the diver or the musk-rat. With the Hare Indians it is the raven who causes the Deluge in vengeance for being thrown into the fire; and it is the white owl who betrays the wise man by letting out the cattle which the raven had imprisoned. With the Cherokees it is a dog which foretells the Deluge; with the Peruvians the llamas reveal it to a shepherd. The Crees have it that an eagle rescued the one surviving maiden, and became by her the father of the new race. In a very original story of the Pimas (California), the god's son Szeuka, being angry with the eagle for having caused the Deluge, climbs up to its eyrie, slays it, and restores to life those whom it had killed (Bancroft, iii. 78).

vi. The general inference from a study of these folklore Deluge stories is that we have not to deal with mythological or cosmological systems, in which a Deluge occupied a part, but rather that these stories were the result of experience, tradition, imagination, and natural curiosity, acting sometimes separately, but more often in combination in different ways and different degrees.

LITERATURE.—The best general book, esp. for Deluge folklore, is R. Andree, *Die Flutsagen*, Brunswick, 1891, which contains a large and interesting collection of Deluge stories. Among the most important books referred to by Andree are H. H. Bancroft, *Native Races of the Pacific States*, 5 vols., London, 1875-76; A. Humboldt, *Sièges des Cordillères et monuments des peuples indigènes*, Paris, 1868; W. Ellis, *Polynesian Researches*, 2 vols., London, 1829; W. W. Gill, *Myths and Songs from the S. Pacific*, London, 1876; E. Süss, *Das Antlitz der Erde*, 8 vols., Leipzig, 1883-85; F. Lenormant, *Les Origines de l'histoire d'après la Bible*, Paris, 1880. For a careful tabulation of Deluge stories, see M. Winternitz, 'Die Flutsagen des Altertums und der Naturvölker,' in *Mitteil. der anthrop. Gesellsch. in Wien*, xxxi. [1901] 305-333. Translations and comments upon the Akkadian Deluge story are given in *KIB* vi. 299 ff.; P. Haupt, *Der keilschriftliche Sintflutbericht*, Leipzig, 1881; A. H. Sayce, *Higher Criticism and the Monuments*, London 1894, ch. iii.; C. J. Ball, *Light from the East*, London, 1897, pp. 34-43. The most important Indian, Chinese, and Persian Deluge legends are given in *SBE*, ed. by Max Müller (see also references in this article). For Greek Deluge stories, apart from theories about them, the best work is H. Usener, *Die Sintflut-sagen*, Bonn, 1899.

F. H. WOODS.

DELUSION.—Delusion in the popular sense simply means a mistaken belief. In the technical sense, however, it means a wrong belief which is maintained because of a defect in thinking. And that is the meaning which the word should always have; for there is manifestly an important difference, for example, between a mistaken opinion which may be held because of wrong information supplied or facts withheld, and one which is maintained owing to an error in reasoning. A delusion is a belief falsely believed—that is, believed be-

cause of a faulty mind. To stretch the point, an opinion, even if it is a good opinion, is delusional if it is not supported by facts. And that brings us to a distinction which is of some value—that there are beliefs which are demonstrably untrue and which are delusions; and there are beliefs which we cannot prove to be untrue, which may even be correct, yet are arrived at by a delusional process.

The delusional state of mind—the kind of thinking which is prone to delusion—very often results from some disease, of greater or less degree, acquired in adolescent or adult life, which warps the judgment by tampering with the brain's mechanism, upon which correct thinking depends. In the development of a mind to the level of a mature judgment, an enormous mass of experience contributes, and a very great part of our thinking rests upon obvious opinions which we never take the trouble to test. It is part of the misfortune of a delusional mind that it may begin to question such standard opinions—opinions which ought to be regarded as axioms, and upon which the whole fabric of our thought is based. For example, a man may have a doubt (and it has occurred, and much writing has been wasted in the exposition of it) as to whether two and two really do make four. Scepticism of this sort, when it goes far, is an exhausting mental process, and the mind that indulges in it is apt to suffer further trouble. It is a form of illness which may be called a wasting disease of the mind, as if a man were to consume his own skeleton and have neither backbone nor leg by which to stand erect. On the other hand, a great deal of delusion can be traced to a vice at the opposite extreme—a kind of mental indolence. A large number of people who have wits enough to think if they had energy to use them, believe things which they have no right to believe, and entertain opinions which do not harmonize with those which they have earned a right to entertain. In these cases, again, there is what we may call a sore spot in the mind—a place where friction occurs when the rational process is checked by superstition. It is always a source of mental weakness in a thoughtful man to reserve certain subjects and to neglect or refuse to discuss them. That, however, is not to say that there is no place in good thinking for reverence, or that a good mind will not continue in mystery. On the contrary, the essence of delusion is the being too certain, too quick to seize and hold a definite opinion. This is illustrated by a very constant quality of delusion—that it refuses to be guided by facts or modified by argument. There are some people whose minds are very hard to move; once they have formed an opinion—and such people form opinions about many things—they will not give up or even be shaken in their belief; and the reason is that it is one of their mental characteristics, due in part to brain conditions, to find changes irksome. We must also observe that there are certain beliefs which are essentially pleasure-giving; it is tempting to hold an opinion which seems fitting and good, and it is easy to retain, as convictions, some comfortable beliefs which have never been subjected to criticism; perhaps the majority of the delusions commonly entertained concern things which people like to believe and refuse to disturb, not on grounds of reason, but on grounds of feeling.

In insane delusions—by which we mean delusions which occur in insanity, and which are due to actual brain disease—the quality of unreasonableness is very marked. If an insane person insists that he is made of glass, he will not be disillusioned by a demonstration of the fragile nature of glass and of his own resistance to fracture; he will only retort

that the kind of glass of which he is made is, not the ordinary breaking kind; hence the common practice with such people on the part of those who have the care of them. And it is the best method for all delusional people, whether sane or insane; there is no use trying to argue with them; therefore change the subject, encourage reasonableness in general, and trust that in time, after a development of other parts of the mind, the 'patient' on coming back to the vexed question again will see it in a new light.

It need hardly be said that the subjects concerning which people are prone to express delusions are often mystifying even to the most expert thinker—electrical phenomena, facts connected with mesmerism or hypnotism, insanity, occult religious facts, and all sorts of novelties and new inventions.

From what has been said concerning the nature of delusion, it becomes clear that the subject is an important one, both in a theory of mind and in practical affairs; and it is instructive to try to determine the extent and the province of delusion in normal thought. To do so exhaustively is impossible; but it is easy to cite a few examples which will suggest, to any one who cares to pursue the subject, a great many more. There is, for instance, a very large group of what we may call natural illusions, which are inevitably and inextricably woven into the fabric of experience, and which, assumed as true, become delusions. In the strict sense, an illusion (*q.v.*) differs from a delusion in that it is an error in *sense-perception* rather than an error in thinking. And it is permissible to hold that delusion includes illusion; that all illusions, when accepted as true, are delusions, though only a few delusions are illusions. By natural illusion, then, is meant all that margin of error—and it is a large one—by which the senses, in their natural and normal activities, convey wrong information to the brain. For it is strictly true that things are not what they seem. It is usual, in this connexion, to enlarge upon visual errors, partly because these are obvious and admit of being proved. It is certain that the picture which the brain receives from the eyes does not correspond to the object looked at. Some of the delusions thereby suggested have been corrected. Every educated man, for example, refuses to accept the testimony of his eyes that the world is flat. Yet a great mass of visual error goes uncorrected; men and women take the picture suggested by the eyes to be true; and, as the error and its acceptance are natural and all but universal, the delusion passes muster in common thought. But, to appreciate the amount of error thus imported, we must not forget that all the other senses are similarly faulty. It is certain, and again capable of scientific proof, that errors of hearing are considerable. Not only do ears differ widely in individuals in their acuteness, but it is certain that no one hears correctly, that the sound-image accepted by the brain never corresponds to the 'pattern' of the sound-waves in the atmosphere. Yet the great majority of people hear enough for practical purposes with approximately the same error in the hearing of it, and, by tacit consent, the error is not regarded. A great fallacy similarly besets the sense of touch and the muscular sense, which gives us information concerning resistances—the hardness and density, weight and strength of things. And, if this is true of senses which supply to the mind data which can be to a large extent scientifically tested, it may be assumed to be equally true of the senses of taste and smell. We may even conjecture that, subtle and complex as these senses are, they are also occasionally illusional.

Before leaving this aspect of delusion, it is well

to advert to hallucination (*q.v.*). A hallucination, like an illusion, is a wrong sense-perception, but differs from it in that there is no outward object for the hallucination. A hallucination is a perception—most commonly of the eye or ear—which is purely and wholly subjective. If the mind accepts this fiction of the senses, there is obviously delusion. Hallucinations do not bulk largely in normal thinking; but they are frequent and important in mental disease.

In conclusion, we may refer briefly to common forms of delusion more in the sphere of thought. Perhaps the best example of all but universal delusion is the common belief in an absolutely free will. It would be entirely out of place here to regard the subject philosophically. Suffice it to say that it is obvious that sometimes one's will is not wholly free in the ordinary sense. Yet people invariably think and speak as if choices were always of their own making. This delusion is clearly necessary and salutary; without it both thinking and doing would come to a standstill. Another delusion, equally inevitable and necessary, is one which besets every thinking man, that is, that he believes he possesses a thinking organ which works correctly. Give two men exactly the same data and let them think out a conclusion: each believes, is bound to believe, that he is thinking correctly; yet in many cases the conclusions will differ; so there must be error somewhere. Finally, we may cite the very prevalent delusion that any thought can reach a final conclusion. Nearly every one feels, and a great many people believe, that a subject can be finished, that thought can reach and hold all there is to be known about it, and usually a statement of the conclusion is forthcoming. And, while it is obvious that no subject can be exhausted and no statement final, this delusion is also inevitable. These examples will suffice to illustrate the subject, and it only remains to add that a wise mind will take note of the inevitable margin of error in its own operations and perhaps discount it, yet not be daunted by it.

GEORGE R. WILSON.

DEMOCRACY.—See GOVERNMENT.

DEMOCRITUS.—A Greek philosopher (c. 460–c. 356 B.C.) whose importance lies in his being the pioneer of Materialism and the mechanical explanation of the universe.

1. Life and writings.—The birthplace of Democritus was Abdera in Thrace, a flourishing colony founded by the Ionian city of Teos. He must have been a fellow-citizen, and, if the received dates are approximately correct, a younger contemporary, of Protagoras. The accounts of his life which have come down to us are open to suspicion on various grounds. They dwell on his insatiable scientific curiosity, which impelled him to spend years in foreign travel. He is said to have visited Egypt in order to learn geometry from the priests, and to have held personal intercourse with Magi and Chaldeans in Persia and Babylonia. What amount of truth there is in these tales it is hard to say. Like Pythagoras, Democritus became to later ages a legendary figure, whose real attainments in mathematics, physics, and astronomy appeared less remarkable than his supposed skill in alchemy and magic. The list of his writings that survives shows him to have been a prolific author. The grammarian

Thrasyllos, in the time of Tiberius, arranged the collection in tetralogies, or sets of four—the same arrangement which he had adopted for the *Dialogues* of Plato. The lucidity and simplicity of Democritus' style are praised in antiquity by competent critics like Timon, Cicero, and Dionysius of Halicarnassus. He wrote in the Ionic dialect, hitherto almost exclusively employed by prose writers, although in his own lifetime it was being gradually superseded by Attic. The subjects treated were, to judge by their titles, chiefly Mathematics, Physics, Astronomy, Anthropology, and Ethics. We have fragments definitely stated to come from the *Κατὰν* and the *Κρατυτήρια*, both dealing with the method of science, and from the *περὶ Εὐθυμίας*, an ethical treatise.

To his mathematical achievements there is unimpeachable testimony. Three of the thirteen tetralogies consisted of treatises on Geometry and kindred subjects, including Optics and Astronomy. From the title of one of them, 'On irrational straight lines and solids' (*περὶ ἀλόγων γραμμῶν καὶ στερεῶν*), it may be inferred that Democritus preceded Euclid in the investigation of irrationals—a problem which, as we know from Plato's *Theætetus*, was occupying the foremost geometers in the 4th cent. B.C. Similarly, Archimedes in his *περὶ τῶν μηχανικῶν θεωρημάτων πρὸς Ἐρατοσθένην ἐφόδος* (lately discovered at Constantinople, and published by Heiberg in 1907) assigns to Democritus no small part of the credit for two important theorems, namely, that the cone is one-third part of the cylinder, and the pyramid one-third part of the prism, having the same base and equal height. Democritus made the discoveries by means of mechanical methods; Archimedes afterwards supplied a rigorous geometrical proof. The investigation by means of mechanics involved a partial anticipation of the infinitesimal calculus (see Heath's *The Thirteen Books of Euclid's Elements*, Cambridge, 1908, iii. 366–368, 4, ii. 40).

It is not, however, from the meagre fragments remaining that we derive our best information as to the doctrines Democritus taught, but rather from the criticism of opponents, especially Aristotle and Theophrastus, who gave to his works the attention they deserved. Aristotle in his scientific treatises is evidently much indebted to Democritus, and, though he often dissents from his conclusions, invariably speaks of him with respect and admiration. Plato, it is true, never mentions him by name, yet from various passages in the *Dialogues* it is obvious that not only was he acquainted with the system of the Atomists, but even regarded Democritus as the type and representative of all those tendencies which he himself most actively combated.

2. Leucippus.—Democritus can hardly claim to have originated the system which he taught. There seems no valid ground for doubting the statement that Leucippus preceded him in laying the foundations of Atomism, which they both afterwards developed in common.

The metaphysical basis of Leucippus' doctrine, as stated by Aristotle, presumed the Eleatic paradox that reality or real being is One, not Many, immutable and eternal, not transient and diverse: whence the Eleatics deduced that our world of manifold and fleeting appearances is not that which truly exists. As all the earlier Greeks, from Thales downwards, in their search for a primary substance were unconsciously endeavouring to frame a conception of matter, the permanent substratum of the outer world, the Eleatic paradox is only another way of stating that matter alone is, where by 'matter' is meant the Full, not the Empty, or, in modern parlance, that which has mass. Empty space, then, if it is not matter, is

non-existent; the world is a continuous indivisible *plenum*. Leucippus, if he is to be credited with originating the Atomistic doctrine, altered this conception by opposing extension to mass as the fundamental postulate. The extended as full and the extended as empty, the *plenum* and the *vacuum*, or matter occupying space and space unoccupied by matter, were in his view equally real. The Eleatics were right in asserting the one, but wrong in denying the other. By introducing real space and the geometrical forms of bodies as spatially determined, Leucippus destroyed the Eleatic One and reverted to pluralism. But he had still to meet the subtle arguments from infinite divisibility, by which Zeno of Elea had disproved the possibility of motion and of multiplicity. Since these arguments could not be refuted, nothing remained but to postulate indivisibles (*ἄτομοι, ἄτομα*) as the ultimate constituents of corporeal reality—things in space (*Ar. Phys.* i. 3. 187a, 1-3). The sum of existence, then, includes empty space as well as the atoms or indivisible particles of matter in space. Both matter and space are eternal, infinite, and homogeneous throughout. The only differences which single atoms present are differences of shape, from which must follow differences of magnitude. But fresh differences are introduced when single atoms come to be grouped and arranged in what we call individual things. There then arise differences of order and position of the atoms in space; for, to use a familiar illustration, A differs from N in shape; AN is not the same as NA, the order is different; nor is H the same as H, the position is different. Aristotle (*Metaph.* i. 4. 985b, 13 ff.) in giving this account admits that he is substituting, for the precise Ionic terms *ῥυσμός* (fashion), *διαθεγή* (inter-contact), *τροπή* (turning), his own equivalents *σχήμα* (figure, shape), *τάξις* (arrangement, order), *θέσις* (position). It will be obvious, upon reflexion, that these three kinds of difference are merely spatial relations posited and presupposed by the very conception of space as extended in three dimensions.

Here seems the proper place to deal with a controversial question of great difficulty: of the three differences between atoms (shape, order, position), only one (shape) relates to single atoms. That size must go with shape as a property of the single atom seems certain: e.g. atoms of fire are described as the smallest as well as the most mobile. But no good authority attributes to Leucippus or Democritus any utterance implying that weight was a fundamental property of the atom, although Epicurus, when he revised the original doctrine of the Atomists, expressly derived weight as well as magnitude from shape, and, as is well known, deduced from their weight the tendency of free atoms to fall. Later authorities not unnaturally confused the Atomic doctrine of Leucippus and the revised version of Epicurus. But the opinion has now gained ground that Leucippus and Democritus put forward no positive views as to weight being a fundamental property of a free or isolated atom, or as to the direction and force of the motion originally inherent in a free atom.

3. Developments of Atomism.—(a) *Relativity of sensible qualities*.—We have given in outline the theory which Democritus adopted and developed. When compared with the rival systems of Empedocles and Anaxagoras, it is seen to be decidedly superior in simplicity and logical coherence. These other systems also resolve the universe into matter in motion; but, in the resolution proposed by the Atomists, qualitative changes in things result from quantitative changes in their constituent elements, and all proceeds uniformly by a law of

natural necessity. Each of these two position calls for further elucidation. The conception of a permanent substratum, or primary matter, to the early Greek thinkers, involved two attributes. It was, they thought, at once indestructible and immutable; in other words, the sum of matter in the universe remains quantitatively and qualitatively constant amid all the change and variety of Nature. How this result was secured by the Eleatics has already been shown. Empedocles and Anaxagoras took another way, maintaining a plurality of elements qualitatively constant. The four elements of Empedocles—earth, water, air, fire—and the infinity of seeds assumed by Anaxagoras are alike in this, that they possess as fundamental and inalienable the qualities perceptible to sense. But these attempts to shape the conception of matter were attended by insuperable difficulties, so long as the sensible qualities of derivative bodies were ascribed to the original elements (whether four or an infinite number) out of which these bodies were compounded. In fact, on the theory of Anaxagoras, the distinction between original and derivative forms of matter vanishes, for there must be as many primary substances as there are varieties of sensible qualities.

This difficulty the Atomists solved by distinguishing the fundamental properties of matter as such from all other sensible qualities. In principle the distinction is the same as that made by Locke between primary and secondary qualities. The changing qualities of sensible things, such as colour, flavour, odour, temperature, cease then to be attributes of matter as such; and Democritus expressed this by saying: 'By custom there is bitter and sweet, hot and cold, and colour; in reality nothing but atoms and void' (*Sext. adv. Math.* vii. 135; Diels, 55 B, 9 [i.² 388]). It would, however, be misleading to characterize these secondary qualities as subjective: they lose nothing of objective validity because the mode in which they produce their effects has become explicable. To take the first pair of qualities in the citation from Democritus—sweet and bitter. It is an acknowledged fact that wine, which normally tastes sweet, is bitter to the jaundiced patient, and we may infer from Plato's *Theætetus* that Protagoras had called attention to this and similar facts. Now the Atomistic doctrine declares wine, like all other sensible bodies, to be merely a complex of atoms of such and such a shape, size, and position, and containing such and such a proportion of *vacuum*. As such, each body produces a certain effect upon all other similar bodies, including the human organs of taste. That effect, again, must partly depend upon the constitution of those organs, and on their permanent or temporary, common or individual, qualities. But, whereas Protagoras emphasized the divergence of the effects under different conditions, and left out of sight its possible causes, the Atomistic theory took account of both. It allowed a relative value to the divergent perceptions, while at the same time it maintained the objective validity of that which produced them—in other words, the structure of perceptible material bodies and the essential properties of the matter out of which they were constituted. Viewed in this light, an enigmatical utterance attributed to Democritus by the Epicurean Colotes becomes perfectly intelligible. If Democritus said that an object does not possess one kind of quality more than another (*τῶν πραγμάτων ἕκαστον εἶπὼν οὐ μᾶλλον τοῖον ἢ τοῖον εἶναι*—*Plut. adv. Col.* 4, p. 1108 F; Diels, 55 B, 156 [i.² 413]), we may be sure that he was speaking of the secondary qualities, and not of the properties of matter as such. The atoms have no secondary qualities. Thus colours, flavours, odours, tem-

perature, have no objective existence *per se*; they, at all events when perceived, are relative to the percipient. To one who held this view the task of science was immensely enlarged, at the same time that it became more definite. The problem was to advance from the known to the unknown, to determine precisely how the motion of atoms in the void produced the totality of changes, and the variety of changing qualities perceived by sense. No wonder that, unaided by the apparatus of modern science, the explorer from time to time regretted the futility of results attained, and confessed with a sigh:

'Truth lies in the deep' (Diog. Laert. ix. 72. 6; Diels, 55 B, 117 [i.² 407]). 'We perceive, in fact, nothing certain, but such things only as change with the state of our body, and of that which enters it, and which resists it' (Sext. *adv. Math.* vii. 136; Diels, 55 B, 9 [i.² 383]).

No less important is the part played in the system by the conception of causation. A fragment of Leucippus lays down the axiom that 'nothing comes by accident, but everything from a cause and under stress of necessity' (Aet. i. 25. 4; Diels, 54 B, 2 [i.² 350]). In such unequivocal terms did he state the universal law of causation, and to this principle his successor consistently adhered. For all that happens in Nature a sufficient explanation was furnished by kinematics and mechanics; there was then no need of any supplementary hypothesis, whether of design on the one hand or of arbitrary spontaneity on the other. It was enough to assume motion as an inherent attribute of matter—an ultimate fact for which no derivation was required. The motions of the atoms were as eternal as the atoms themselves, and were necessary; that is, in the unending series of movements each followed upon and was determined by definite antecedents. Granted that atoms moving in space come into collision, the whole history of the universe becomes an application of mechanical laws. Colliding atoms suffer pressure and impact, unite in groups, and break away from such unions; and thus arises all change, the succession of all events: the birth and destruction alike of particular things and of the infinite worlds are but moments in this succession.

(b) *Cosmogony*.—The direct outcome of Atomic motion must be the production of our world and of all the individual things in it, for these are given in experience. As to the process by which this goal is reached, our information is sadly defective. Of one thing we are certain—that Leucippus and Democritus had no recourse to external forces, such as the attraction and repulsion which Empedocles personified as Love and Strife, or the *voûs* of Anaxagoras. A late epitomator writes of Leucippus:

'The worlds arise when many atoms are collected together into the mighty void from the surrounding space and rush together. They come into collision, and those which are of similar shape and like form become entangled, and from their entanglement the heavenly bodies arise' (Hippol. *Ref.* i. 12; Diels, 54 A, 10 [i.² 345]). Another account gives fuller details: 'Many atoms of manifold shapes cut off from the infinite are borne into a vast void, and these collections set up a single vortex movement, i.e., they are whirled in all directions, so that . . . the like atoms come together. And, as they become too numerous to revolve with equal velocity, those which are lightest, so to speak, sifted out, and fly off towards the outer void; and the rest remain together, and, becoming entangled, join their orbits with one another, and form in the first place a spherical mass. This becomes a sort of shell, including in itself atoms of all kinds; and, as these through repulsion from the centre are made to revolve, the enclosing shell becomes thinner and thinner, the adjacent atoms being attracted as soon as the vortex overtakes them. In this way the earth was formed as the portions brought to the centre coalesced. And, again, even the outer shell grows larger by the influx of atoms from outside, and incorporates with itself whatever it touches. And of this some portions are locked together and form a mass which was at first damp and miry, then dried as it revolved with the universal vortex, and afterwards took fire and formed the substance of the stars' (Diog. Laert. ix. 32; Diels, 54 A, 1 [i.² 343]).

In this effort of the scientific imagination several

points deserve notice. The doctrine of innumerable worlds or cosmical systems becomes clearer when we consider that matter and space are supposed to be infinite, and any place where atoms meet may become the kernel or nucleus of a world, provided that a vortex motion is thus set up, and in consequence a sufficient aggregation of matter crystallizes, so to speak, around a centre. As, moreover, the atoms are infinitely various in shape, the worlds formed from them will display the greatest diversity; though it may also happen that some of them are absolutely alike. Again, the principle of 'like to like,' common to most of the Greek physicists, receives some sort of explanation from the assumption of a vortex. As, on the beach, pebbles of like size and shape are collected by the tide, as the winnowing-fan sifts and separates grain (Sext. *adv. Math.* vii. 117; Diels, 55 B, 164 [i.² 415]), so the cosmical vortex plays the same mechanical part in bringing together homogeneous particles, that is, atoms approximately alike in size and shape. Thus Democritus is able to bring his notion of our world into tolerable harmony with popular opinion. It floats in the void, surrounded by its revolving shell of tightly compressed atoms—the vault of heaven; the space between this outer envelope at the circumference and the solid earth at the centre is filled with air in which the stars move. The earth presents a flat surface above and below, round horizontally like a quoit or tambourine, and so broad as to support itself on the air.

We may note the influence of Anaximander, with whom probably originated the old Ionian theory of infinite worlds, and of Anaxagoras (*q.v.*), who postulated a rotatory movement to effect separation of unlike and aggregation of like. Democritus can hardly be credited with original contributions to astronomy; but he welcomed the novel doctrines of Anaxagoras which had so startled his contemporaries. He held the sun to be a red-hot mass, but regarded it and also the moon as originally the nucleus of a separate system, which had been entangled in the vortex-motion of our world and subsequently ignited. The oceans were formed when, under the influence of wind and solar heat, the smaller particles were forced out of the earth, and ran together as water into the hollows. In relative size the central earth exceeds the sun, moon, and stars; yet the latter must have been accorded considerable dimensions if Democritus accepted the Anaxagorean assumption of plains, mountains, and ravines upon the moon's face (Aet. ii. 25. 9; Diels, 55 A, 90 [i.² 367]).

This cosmology is vitiated through and through by the undue importance it gives to our planet. The geocentric hypothesis still retained its sway over the philosopher, who tells us:

'There are infinite worlds, differing in size; and in some of them there is no sun and moon, in others the sun and moon are larger than in our world, or there are several suns and moons. The worlds are unequally distributed in space; here there are more, there fewer; some are waxing, some are in their prime, some waning; coming into being in one part of the universe, ceasing in another part. The cause of their perishing is collision with one another. And there are some worlds destitute of moisture and of living creatures. In our world the earth was born before the stars; the moon is nearest to the earth, the sun comes next, fixed stars are furthest off. The planets themselves are at unequal distances from us. A world is in its prime so long as it is able to absorb fresh matter from without' (Hippol. *Ref.* i. 13; Diels, 55 A, 40 [i.² 360]).

In the words of an enthusiastic admirer (Gomperz, *Griechische Denker*, i.³ 295), we seem to be listening to a modern astronomer who has seen the moons of Jupiter, has recognized the lack of moisture on the moon, and has even caught a glimpse of nebulae.

(c) *Psychology*.—All particular things, and amongst them the four so-called elements—earth, water, air, fire—are aggregates or atom-complexes;

and their character is determined by the shape, order, and position of their component atoms. Atmospheric air plays its part, but the most important is fire, because the most mobile, being composed of atoms exceedingly fine, smooth, and round. Fire-atoms are the moving principle of organic bodies, the soul being a sort of fire or heat, while mental activity is identical with the motion of these fiery particles. Upon this foundation is constructed a materialistic psychology, which in turn determines the epistemology and ethics of Democritus. Such a doctrine invites comparison with the speculations of Heraclitus and Anaxagoras, the former of whom regarded soul as an exhalation fed by vapours from the warm blood. The *νοῦς* of Anaxagoras, whether by this he meant simply intelligence, or some sort of mind-stuff, was supposed to be diffused throughout the universe; and similarly the theory of Democritus tends to destroy any fixed line of demarcation between organic and inorganic in Nature. For, according to him, fiery soul-atoms are taken in from outside. Owing to their great mobility, they are constantly liable to escape from the animate body, and this tendency is counteracted by the process of respiration, which checks the escape of imprisoned soul-atoms by a current of air, and continually renews them. In sleep or in a swoon there is less resistance: more of the fiery atoms escape, and mental activity is proportionately diminished; while death itself is the result of their entire dispersion in the surrounding air. Since all qualitative change in things is reduced to, and explained by, quantitative changes of atoms and atomic motions, no exception can be made in dealing with psychical activities and the phenomena of mental life. Sensation, thought, and all other functions of the soul are in reality movements of the soul-atoms, produced in accordance with the mechanical laws of pressure and impact. This principle is rigorously carried out, and its consistent application is a characteristic feature of Atomistic psychology. It is most obvious in the theory of sensation, which Democritus in part inherited from Empedocles. Contact between object perceived and percipient is the indispensable condition of all perception, so that all the various senses are in the last resort modes of one—viz. touch (*Ar. de Sensu*, iv. 442a, 29).

When, as in the case of sight, hearing, and smell, the perceptible object is at a distance, Democritus, like Empedocles, supposed that particles of external things found their way into the pores of the sensory organs. It is true that, according to Empedocles, the pores or passages through which the particles travelled were never absolutely empty, for, on his view, the universe was a *plenum*; whereas Democritus supposed the particles thrown off to move, like all atoms, through empty space; but this hardly affects the general likeness between the two theories. The introduction of atoms in certain ways, through the organs, to the soul answers to the introduction of effluxes (*ἀπορροαί*) through the pores, which Empedocles maintained. The atom-complexes thus given off resemble the external objects themselves. Democritus called them *δελεα*—an Ionic term for which Aristotle substituted *εἰδωλα*. What we perceive, then, is in a manner in the soul; but the soul itself must consist of matter capable of being affected mechanically by it, that is, capable of the impact, reaction, movement, *ἀλλοίωσις*, which is the essence of perception.

The sensory organs thus become passages for instreaming atoms. Take vision. The eye is a moist porous organ—seeing results when the image of an object is mirrored in the pupil. So much we are told on excellent authority; but how

it comes about that the pupil receives, or, if it is a mirror, reflects, this image, is a point on which neither the criticisms of Aristotle and Theophrastus nor the later accounts of Aetius and Alexander Aphrodisiensis throw much light. In fact, it remains doubtful whether the efficient cause is the emanation from the visible object or the air which has received a certain impression, comparable to that of a seal upon wax, from this emanation. The suggestion that in seeing nearer objects the former, in seeing distant objects the latter, is the proximate agent, although ingenious, lacks all authority. Colour, the proper object of vision, as explained above, is not a primary quality of bodies, but is relative to the percipient. The visible thing is composed of colourless atoms of given shape arranged in a certain order and position, and, when it is said to have colour in virtue of its atomic structure and the movements of its atoms, this really means that it is capable of exciting a particular effect in the sensory organ—the eye. Democritus assumed four primary colours—white, black, red, and green (*χλωρόν*)—and derived all other shades of colour from the mixture of the primary four in definite proportions. From this it follows that the numerous bodies which cannot be classed as having one or other of the primary colours must be of a composite nature; they must, that is, include in their composition other than merely homogeneous atoms. Thus, referring white to smooth and red to round atoms, he must have assumed, in the structure of gold and bronze, the presence both of smooth and of round atoms, since he declared the colour of these metals to be a mixture of white and red. This theory of colour seems to have been carefully elaborated, to judge by the summary and criticisms of Theophrastus (*de Sensu*, 49 ff.). The crudeness of his assumptions is obvious: whiteness is supposed to be due to smooth, blackness to rough atoms, redness is caused by heat, and the atoms of fire are supposed to be spherical.

In the treatment of hearing and its correlative object, sound, of which speech or vocal sound is the leading type, Democritus agreed in the main with his contemporaries. As emanations (*δελεα*) from visible bodies are the stimulus of vision, so the sounds (*φωναί*) which stimulate the organ of hearing are particles or atom-complexes thrown off by the sonant body, and conveyed by the medium of the air to the ear, and through it to the soul. The stream of atoms given off by a sonant body sets the atoms of the air in motion, and, joining itself with these according to similarity of shapes and sizes, makes its way into the body. The orifice of the ear is the chief, but not the sole, entrance for such a current. In making the current affect not the ear alone, but other organs of the body, Democritus showed decided originality. He may have meant no more than that the whole body is sympathetic to the operation of hearing. Probably the purity of sounds was made to depend on the similarity, the pitch and volume on the magnitude, of their constituent atoms. The process by which the sound-atoms themselves and the air broken up by them are, as it were, sorted so that similar shapes and sizes come together must be understood as purely mechanical.

If a theory of emanations from bodies at a distance be employed to explain seeing and hearing, no difficulty will be encountered in applying it to the sense of smelling. The rapid diffusion of perfume is a familiar fact, and it is easily inferred that a finer matter is given off by odorous bodies in the form of an attenuated stream of atoms, which reaches the nostrils. Theophrastus complains of the omission to connect a distinctive quality of the various odours with the atomic

configuration of their particles; but Democritus probably regarded this connexion as easily deducible from the similar connexion between atomic configuration and distinctive quality in the kindred region of tastes, with which he dealt very fully. Thus, he referred an acid taste to atomic shapes which are angular, winding, small, and thin; the sweet to shapes which are spherical and not too small; the astringent to shapes large and with many angles. The bitter is composed of shapes, small, smooth, and spherical, with hooks attached to the spherical surface; the saline of large shapes, in many cases not spherical, but in some cases also not scalene, and therefore without many flexures; the pungent is small, spherical, and angular, but not scalene.

With this the theory of sensation is complete. All senses have been resolved into modes of touch, which must, therefore, have been for Democritus the primary sense, as it was for Aristotle. But of touch itself as a physiological function he could give no detailed investigation. Pressure, impact, and motion—purely physical conceptions—are employed by the Atomists without misgiving, as if they had not realized the true nature of the physiological process. The relations between realities of every kind were reducible to the purely mechanical form. The interaction involved in sense-perception could not differ from the action of any atomic bodies whatsoever upon one another, for this contact is the necessary and universal condition, and contact between *percipiens* and *percipiendum* only a special case. Sensation itself is the movement set up when spherical soul-atoms have thus been brought into contact with the atoms of an external object, or the atom-complexes (*δέκελα*) emanating from them. On this theory, then, sensory facts have nothing to distinguish them from the larger total of physical facts; nor can there be a fundamental difference between sensation and intellect. Aristotle expressly testifies that Democritus made no such distinction (*ταὺτὸ λέγει ψυχὴν καὶ νοῦν* [*de Anima*, i. 2. 404a, 28, 31; cf. 405a, 9]). There is no evidence that he put to himself Aristotle's question, What is the faculty by which the data of sense are combined and distinguished, by which we are conscious of our mental acts, by which we imagine and remember? All our information is that, while the soul-atoms were divided or distributed over the entire body, he located certain mental functions in certain parts of the frame; e.g. the separate sensations in the sensory organs, and, further, according to some doubtful authorities, intelligence in the brain, anger in the heart, appetite in the liver. Such statements are not in themselves incredible, on the assumption that, in different parts of the body, soul-atoms of distinctive size and mobility are apt to be associated and massed together; but the partial anticipation of Plato's tripartite division of soul is open to suspicion, and on such points Aetius and pseudo-Hippocratean writers of the 2nd cent. are not to be trusted.

What, then, is thought, and how does thinking come about? It must be analogous to sensation in so far as it is a movement of soul-atoms stimulated by an external cause; the latter is not far to seek, when we reflect on the familiar fact of the similarity between a sensation and the corresponding idea. Emanations from external objects (*εἰδῶλα ἐξωθεν προσιόντα*) must then be postulated for the latter as for the former. The same causes acting upon soul-atoms in the same mechanical fashion accounted for dreams, visions, and hallucinations. So far from rejecting these mental processes as illusory, Democritus seems to have based upon them some sort of divination or mantic. The emanations which excite these abnormal processes must be

supposed to be of a finer texture than those of ordinary sensation or thought.

(d) *Epistemology*.—What, then, is the relation between sensation and thought—in other words, what contributions does Democritus make to the theory of knowledge? The *locus classicus* is a passage preserved by Sextus (*adv. Math.* vii. 138; Diels, 55 B, 11 [i.² 389]). It was taken from a work entitled 'The Canon,' which presumably discussed the process of inference from the known to the unknown, and laid down rules for induction. The passage runs as follows:

'There are two forms of knowledge, the genuine and the obscure. To the obscure belong all these: sight, hearing, taste, smell, touch; the other form, genuine knowledge, is altogether distinct from this. . . . 'In what follows,' says Sextus, 'Democritus ranks the genuine form above the obscure, and adds [to follow the restoration of the text by Diels]: "When the object becomes too minute for the obscure form of knowledge to see, or hear, or taste, or smell, or touch it, when greater precision is required, then the genuine knowledge comes into play, as the possessor of a more precise organ of discrimination."'

This means that thought can reach that which is inaccessible to sense. The Atomic theory, as it shaped itself in the mind of the philosopher, is a proof, for neither the atom nor space is sensibly perceived. Moreover, the geometrical forms and the whole of geometrical science, to which Democritus gave as loyal a support as Plato himself, being inseparable from space, have the same rational origin. It is true that he made no fruitful application of geometry to physical research, but the same may be said of the Pythagoreans, of Plato, and of all who preceded Galileo. Further, it is easy to see why the Atomists preferred thought to sense, though both have essentially the same object—corporeal things and material processes, atoms and atomic movements. Thought was to them mental intuition, an affection which registers, so to speak, more delicate movements due to complexes of minuter atoms. The senses do not extend far enough; the mental vision descends the atom, but the bodily eye cannot. The senses, being unaffected by the finer atomic movements, desert us at the point where the minutest bodies and the most delicate processes require investigation.

(e) *Ethics and religion*.—The scanty fragments which have come down to us under the name of Democritus include a mass of moral reflexions. Much of it is undoubtedly spurious, and the task of sifting the grain from the chaff has not yet been accomplished with success. Though little of scientific value has been preserved, the outlines of a definite view of life stand out clearly. In form these utterances bear the stamp of the scattered moral reflexions attributed to Heraclitus and the Pythagoreans, the single exception known to us being the treatise *περὶ Εὐθυμίας*, which made some advance to a definition of the ethical end. The treatise apparently opened with a description of the miserable condition of the majority of mankind, distracted by inordinate desire and superstitious terror, vainly striving for a multitude of objects without finding in any of them permanent satisfaction. As the goal of moral endeavour, Democritus proposed what he himself called tranquillity or cheerfulness (*εὐθυμία*) and well-being (*εὐεστία*). Such composure or peace of mind he compared to an unruffled calm at sea (*γαλήνη*). Other terms for this ethical end occur in the fragments, such as *ἀθαμβία*, *ἀταραξία*, *ἀδανασία*, *ἀρμονία*, *ἐνυμμετρία*; but it is not certain whether they were ever used by Democritus himself. His main tenet, repeatedly enforced in a variety of ways, is that true happiness, this inestimable tranquillity, does not depend on anything external, on wealth or goods of the body, but on uprightness and intelligence. Moderation and contentment, purity of deed and thought, are its distinctive marks; education is the best means to it.

The question arises whether this ethical teaching (of which, after all, we know so little) is intimately connected with the physical doctrines of the Atomists, so as to form part of one system. On this opinions are divided. Some deny all connexion, and are inclined to regard Democritus, not as the systematizer, but as the eager inquirer, who disperses his energy over a multitude of subjects, and lays the foundation of separate unrelated sciences. Again, it has been suggested that the contemplation of an infinite universe impressed Democritus with a just sense of the pettiness of man and the futility of the ends which ordinary men pursue. But this conjecture is just as improbable as the popular conception of him as the 'laughing philosopher,' provoked to merriment by the incongruity of all around him. Others, taking the distinction between genuine and obscure knowledge as their text, draw a parallel between the preference of thought over sensation, and the similar preference of tranquillity over violent and exciting pleasure. As sensations are atomic movements, so also are feelings, whether pleasurable or painful, and desires. Aristippus had called pleasure a smooth, and pain a rough or violent motion. To Democritus the distinction is not so much qualitative as quantitative; it is in minute and delicate movements of the finest matter, which are imperceptible to sense, that thought and the joys of thought consist.

The views of Democritus about religion are very imperfectly known. A fortunate accident has preserved in the pages of Sextus Empiricus (*adv. Math.* ix. 19; Diels, 55 B, 166 [i.² 415]) his curious belief in superhuman beings, and from other sources he is known to have maintained the possibility of divination from dreams and from the inspection of the liver and other organs of the sacrificial victim. There is nothing in these beliefs which is not in harmony with the principles of atomistic physics, although development in this direction is at first sight somewhat startling. To take divination by victims first. According to Cicero (*de Divin.* i. 57 [131]), the changes to be foretold by an inspection of the entrails were such as affected public health or the prospect of the harvest. The limitation to such cases proves that the symptoms examined and reported upon were such as were due, in the belief of Democritus, to natural causes. Dreams, whether of the ordinary or of the prophetic kind, were, on the atomistic hypothesis, due to images or εἰδωλα presented in sleep. Emanations from all possible objects flit about continually; amongst them there may be some which reflect the mental condition or even the opinions and designs of other men. Information then obtained in dreams of this sort is a matter of inference, just as when in waking hours the condition and intentions of others are inferred from their looks. The data, however, are less trustworthy, and hence the interpretation of dreams is often erroneous. Emanations, it will be seen, can thus be satisfactorily employed to explain what is unusual and abnormal.

As to the popular theology, it could not be accepted by any of the early Greek thinkers, least of all by Democritus. The interference of Homer's deities in the course of natural events was utterly at variance with speculations which, if they agreed in nothing else, all tended to establish the reign of law and the inevitable sequence of phenomena. If nothing exists but atoms moving in void, if every event is inexorably determined by natural necessity, Divine agency and design in Nature are alike excluded. Democritus was true to this principle, and incurred the censure of Aristotle because he refused to see in the beauty and order of the universe, and more especially in the adaptation of means to ends in the structure of animals and plants, any evidence of design. It remains, however, for the philosopher to explain how the belief in gods arose. Democritus in part ascribed it to man's terror at the awe-inspiring phenomena of Nature—thunder and lightning, eclipses of the sun and moon, comets, earthquakes, and the like. In the popular belief the gods were certainly regarded as the causes of natural phenomena, and, so far, as personifying natural forces. But this was not all; in part the faith of the multitude rested on actual evidence of sense, observations which there was no

reason to doubt, even if they had been misunderstood. To meet this case, Democritus introduced as a *vera causa* beings differently constituted and in some respects superior to man. He may have been prompted by the common Greek notion of dæmons (δαίμονες), found, e.g., in Hesiod, as something intermediate between men and gods; or it might even be said that he degraded the gods to the rank of dæmons. He assumed, at all events, that there are in the surrounding atmosphere beings who are similar to man in form, but surpass him in size, strength, and longevity. Streams of atoms would emanate from them as from all other external objects, and, coming in contact with the sensory organs, might render these beings visible and audible to men. The popular belief in their divinity and immortality was a gratuitous assumption; in truth, they are not indestructible, but merely slower to perish than man. Of these beings and their images there were two species—one kindly and beneficent, the other destructive and harmful. Hence Democritus is said to have prayed that he might meet with such images as were kindly and beneficent.

The atomistic doctrine which, as mentioned above, supposed an entire dispersion of soul-atoms to take place at death, left no ground for inferring the survival of individual existence. The instinctive fear of death is once or twice referred to in the fragments, and generally as something unreasonable. With the interest of a modern man of science, Democritus appears to have investigated cases of resuscitation of persons apparently dead, and to have decided that, however violent the injury received, life during the swoon or trance cannot have been altogether extinct (Procl. in *Remp.* ii. 113, 6 [Kroll]; Diels, 55 B, 1 [i.² 384]). We have no evidence that he or any of his school were active in denouncing and opposing superstition. One of his works bears the title Περὶ τῶν ἐν Ἀΐδου, but the sole reference extant to belief in a future life is the passing allusion:

'Some men do not understand that a mortal nature is subject to dissolution, and, being conscious of the evil in life, painfully spend all their days in troubles and fears, inventing lies about the time after death.'

4. Historical importance.—The doctrine here presented in outline was never popular in antiquity, or rather it may be said to have fallen into disrepute. This was due in part to the fact that Democritus avoided dialectical discussions, so dear to the Greeks from the time of the Sophists. Yet Aristotle, his keenest critic, praised him for his empirical method of research, and agreed that it was better to deal with things in the concrete (φυσικῶς ζητεῖν) than to reason from vague abstract premisses to conclusions which did not exactly fit the facts of the case (λογικῶς ζητεῖν). The great prominence given after the time of Socrates to ethics and the practical side of life was another reason why Atomism failed to attract public attention. Few names of adherents have come down to us, hardly enough to be called a school. Epicurus (*q.v.*) absorbed in his own system what he thought fit, leaving one fundamental doctrine—that of natural necessity—to his rivals, the Stoics. Here the genuine doctrine of Democritus vanishes, or re-appears only in those criticisms of Aristotle's which, as Lasswitz has shown, formed, to some of the keener intellects among the schoolmen, a rallying-point from which to question or even ultimately to undermine the authority of the Stagirite. The loss of Democritus' writings was, in Bacon's opinion, the greatest which antiquity had sustained; and, after Galileo's experiments had opened a new era in physical research, this appreciation of empirical methods was triumphantly vindicated.

The chief service which Democritus rendered to

philosophy lay in the rigid consistency with which he worked out his crude Materialism. His merits in this respect are best seen by comparison with the Ionian hylozoists who preceded, and the Stoic pantheists who followed, him. So long as material reality is endowed with sentience or reason, the problem of Materialism is not adequately conceived, nor are its difficulties properly faced. The Atomists saw clearly what they had to do, namely, to show how out of matter, which is neither sentient nor intelligent, but merely obeys mechanical laws, it is possible to derive organic bodies which both feel and think. The difficulty of the task was not removed by this clear conception of its nature. There is a gap in the deduction, which no ingenuity can bridge over. The formation of an image on the pupil and the visual sensation contemporaneous with it remain wholly distinct: the physics of Democritus may explain the first, but not the second. Ever so correct a theory of the mechanism of local movements in the animal still leaves the phenomena of purpose and volition as mysterious as ever, as Aristotle pointed out. The resolution of secondary qualities, as they are called—colour, sound, temperature, odour, etc.—into effects of atomic movements on the percipient was a great step in advance; but Democritus did not realize all its consequences. Modern psychology has shown that the same analysis can be applied to primary

qualities, and the seeming solid bodies of the Atomists' external world replaced by groups of tactile sensations; while, further, it asserts that these states of consciousness are our primary data of immediate reality. Thus Materialism, if worked out consistently, is apt to lead out of itself to Phenomenalism or Subjective Idealism, or in some other direction.

DEMONS AND SPIRITS (Introductory; African and Oceanian).—Although a rough distinction may be drawn between demons and spirits by considering the former as malevolent and the latter as benevolent, actual study of the subject soon shows that there is, to the primitive mind, no clear line of demarcation between the two allied classes. Their modes of operation are identical, and the same being may often be either beneficent or maleficent, as circumstances may dictate, though some are normally kindly disposed towards man, while others are almost or quite invariably hostile to him. The very terms 'spirit' and 'demon' are colourless. The former word signifies simply 'breathing,' 'breath' (see artt. BREATH, SPIRIT), while the latter (*δαίμων*) originally denoted either 'apportioner' or, less probably, 'apportionment,' 'destiny,' being connected with Gr. *δαίωαι*, 'divide,' 'apportion,' and Eng. *time* (Boisacq, *Dict. étymol. de la langue grecque*, Heidelberg, 1907 ff., p. 162; cf. also ARYAN RELIGION, vol. ii. p. 54*). The term 'demon' has, moreover, suffered a complete transformation of meaning in *malam partem*, for originally, as will be clear from the 'Greek' section of this art., it had a good connotation, which was changed into an evil one when Christianity condemned the deities and spirits of paganism (see, further, 'Christian' section below)—a change quite analogous to that by which the Avesta *daēva*, 'demon,' is the precise etymological equivalent of the Skr. *deva*, 'god.'

Again, both demons and spirits—to retain for the nonce their somewhat artificial contrast—must be carefully distinguished from souls or ghosts (cf. artt.

SOUL, ANCESTOR-WORSHIP, and the 'Egyptian' section below). This comes out very clearly among the Melanesians,¹ with whom

'it is most important to distinguish between spirits who are beings of an order higher than mankind, and the disembodied spirits of men, which have become in the vulgar sense of the word ghosts. . . . They [the Melanesians] themselves make a clear distinction between the existing, conscious, powerful, disembodied spirits of the dead, and other spiritual beings that have never been men at all' (Codrington, *Melanesians*, Oxford, 1891, p. 120 f.).

The *vui*, or spirit, thus contrasted with the *tindalo*, or ghost, was defined as follows to Codrington by a native of the Banks Islands:

'It lives, thinks, has more intelligence than a man; knows things which are secret without seeing; is supernaturally powerful with *mana*; has no form to be seen; has no soul, because itself is like a soul';

and in Omba, Lepers Island, the definition of *vui* is as follows:

'Spirits are immortal; have bodies, but invisible; are like men, but do not eat and drink, and can be seen only by the dead' (Codrington, 123, 170).

That, despite this assignment of a purely spiritual nature to the *vui*, they should often be regarded practically as in human form, and even as sometimes dimly visible (*ib.* 151 f.), is by no means surprising when we remember that it is well-nigh impossible for man at any stage of civilization to escape entirely from anthropomorphism (*q.v.*).

This distinction between spirits and ghosts is, however, much easier to make in theory than in practice, and Taylor's words regarding the New Zealanders (*Te Ika a Maui*, London, 1870, p. 108)

¹ A very similar distinction may be found in Greek between *ψαῖ*, *δαίμονες*, and *πνεύμα*, the two latter classes corresponding respectively to the Melanesian *vui* and *tindalo* (cf. Usener, *Götternamen*, Bonn, 1896, p. 248 f.).

—'Maori gods are so mixed up with the spirits of ancestors, whose worship entered largely into their religion, that it is difficult to distinguish one from the other'—may be applied to more than one people (cf. also, for Africa, Schneider, *Relig. der afrikan. Naturvölker*, Münster, 1891, p. 113).

But, if demons and spirits must be distinguished from ghosts or souls, an equally clear line must be drawn between them and gods—although it is true that confusion of demons and spirits with gods is frequent, exactly as demons and spirits are often confounded with souls or ghosts. There is, nevertheless, this difference between the two kinds of confusion, that, whereas demons and spirits are, strictly speaking, distinct from souls and ghosts in that the *vui* 'were never men, and have not the bodily nature of a man' (Codrington, 124), the difference between demons and spirits as contrasted with gods appears to be one of degree rather than of kind, so that demons and spirits may be, and very often are, elevated to the rank of gods. On this point Jevons writes as follows (*Introd. to the Hist. of Religion*³, London, 1904, pp. 173, 175):

'For the savage, supernatural beings are divided into three classes—the gods of his own tribe, those of other tribes, and spirits which, unlike the first two classes, have never obtained a definite circle of worshippers to offer sacrifice to them and in return receive protection from them. This last class, never having been taken into alliance by any clan, have never been elevated into gods. . . . On the one hand, the community originally drew its god from the ranks of the innumerable spiritual beings by which primitive man was surrounded; and, on the other hand, the outlying, unattached spirits, who were not at first taken into alliance, and so raised to the status of gods, may ultimately be domesticated, so to speak, and made regular members of a pantheon.'

The relations of demons and spirits to that phase of primitive religion properly known as Animism (*q.v.*) are peculiarly close, so that Tylor (*i.*³ 426) declares:

'It is habitually found that the theory of Animism divides into two great dogmas, forming parts of one consistent doctrine; first, concerning souls of individual creatures, capable of continued existence after the death or destruction of the body; second, concerning other spirits, upward to the rank of powerful deities.'

Whether, however, Animism actually furnishes, as was once fondly supposed, a complete explanation of the origin of religion, or whether it was even the earliest form of religion, seems open to grave doubts (cf. the views of various scholars recorded by Schmidt, 'L'Origine de l'idée de Dieu,' in *Anthropos*, iii. [1908]); and the theory is scarcely supported in Melanesia, where so accurate an observer as Codrington can say (p. 123):

'There does not appear to be anywhere in Melanesia a belief in a spirit which animates any natural object, a tree, waterfall, storm, or rock, so as to be to it what the soul is believed to be to the body of a man. Europeans, it is true, speak of the spirits of the sea or of the storm or of the forest; but the native idea which they represent is that ghosts haunt the sea and the forest, having power to raise storms and to strike a traveller with disease, or that supernatural beings, never men, do the same.'

It must also be borne in mind that, while spirits are very frequently believed to inhabit trees, rivers, rocks, and the like, there are many spirits to which no such specific habitat is assigned. In other cases the abode, even in a tree, river, or rock, may be but temporary—a phenomenon which is especially characteristic of dream-demons, disease-demons, and the like.

There is, furthermore, a close connexion of demons and spirits with the great type of religion known as Fetishism (*q.v.*), which may roughly be defined, with Tylor (*ii.* 144), as 'the doctrine of spirits embodied in, or attached to, or conveying influence through, certain material objects,' the fetish itself being a material, or even animal (cock, serpent, bear, etc.), or natural (river, tree, etc.), object in which a spirit is believed to take up its abode, either temporarily or permanently. To quote Tylor (*ii.* 145) again:

'To class an object as a fetish, demands explicit statement that a spirit is considered as embodied in it or acting through it or communicating by it, or at least that the people it belongs to do habitually think this of such objects; or it must be shown that the object is treated as having personal consciousness and power, is talked with, worshipped, prayed to, sacrificed to, petted or ill-treated with reference to its past or future behaviour to its votaries.' Cf., however, the well-founded objection of Jevons, pp. 166–169, to the scientific use of the word 'fetish' at all, since it 'may mean one thing to one person and another to another, because it has no generally accepted scientific definition.'

Nevertheless, however vague the term 'fetish' may be, it is at least clear that the idea of spirit-habitation which it conveys is closely connected, in its development, with the forms of religion associated with amulets (see CHARMS AND AMULETS, vol. iii. p. 398^a) and idols (see IMAGES AND IDOLS).

Generally speaking, a spirit is regarded, unless properly propitiated, as malevolent and maleficent more often than as benevolent and beneficent; in other words, to revert to the common, though lax, phraseology, demons are more numerous than spirits. At first sight this state of belief is analogous to that which gives more prominence to malignant than to benignant deities, because the benevolent gods are already good and need no propitiation, while every effort must be made to appease and to propitiate the malevolent ones. Such, however, does not seem to be the real psychology in the case of demons and spirits. The true ground for the predominance in number and in importance of malevolent over benevolent spirits appears to be well outlined by Jevons (p. 177), who finds the explanation in the fact, already noted, that the spirit is unattached to any clan or community, whereas a god is connected with one or another clan. The spirit is, therefore, much in the position of an unattached ghost; and, as to the primitive mind, with its intense concept of kinship—whether real or artificial—all that is not akin is hostile, a spirit thus unattached, and consequently unakin, would naturally tend to be regarded as hostile and malevolent. It must be remembered, too, that the qualities ascribed to the spirits reflect in great measure the qualities of their worshippers (cf. Schneider, 106); for instance, the Kioko of Portuguese West Africa hold that each spirit has his own district, which he jealously guards, being deeply angered by the intrusion of any neighbouring spirit (*ib.* 150). Spirits also possess other traits still more human, so that, among the African Bambara, the spirits 'have sex, males and females are found among them, they have children, and some, if not all, even believe them to be clothed' (Henry, in *Anthropos*, iii. 702); while in Loango we find a specific 'mother of spirits' named Bunsî, who has peopled the whole land with spirits, who in their turn have begotten others (Schneider, 132 f.); and the Australian Urabunna and Warramunga believe that the black-snake totem ancestor begot spirit children who now live in water-holes and in gum-trees along the bank of the creek (Spencer-Gillen³, p. 162, cf. also p. 301).

It is comparatively seldom that the primitive mind makes a clear discrimination between good and evil spirits so far as to distinguish them by special epithets, as do the Africans of Benguela (Schneider, 135); and the very fact that the names applied by the Malays of Passumah Lebar to good spirits (*dewa*) and to evil spirits (*jinn*) are of Skr. and Arab. origin respectively (Waitz-Gerland, *Anthropol. der Naturvölker*, Leipzig, 1860–72, v. i. 166) betrays the late date of this nomenclature (cf. also Tylor, *ii.* 319).

In the regions under consideration, belief in demons and spirits is especially characteristic of Africa (as is shown at once by the fact that 'fetishism' is *par excellence* the type of African

religion¹), where it maintains itself side by side with ghost-worship. In Oceania, on the other hand, the two types of religion are mutually exclusive. In Polynesia, Australia, and Micronesia, spirits are practically unworshipped as compared with ghosts, while in the Ellice Islands and the Union Group (Tokelau) the reverse is the case (Waitz-Gerland, v. ii. 139-142, 194-199); and in Melanesia

'religion divides the people into two groups; one, where, with an accompanying belief in spirits, never men, worship is directed to the ghosts of the dead, as in the Solomon Islands; the other, where both ghosts and spirits have an important place, but the spirits have more worship than the ghosts, as is the case in the New Hebrides and in the Banks Islands' (Codrington, 123).

Naturally, the same effect may be ascribed by primitive man to different causes. Thus, among the Orang Kubu of Sumatra and the Mintira of the Malay Peninsula, disease is caused by spirits (Waitz-Gerland, v. i. 181; *Journ. Ind. Archipel.* i. 307), whereas in Africa generally and in Melanesia (Schneider, 116, 125, 152; Codrington, 194) disease is more commonly due to malignant ghosts—although here, too, the vague distinction between ghosts and spirits, already noted, often renders uncertain any precise determination of the cause of disease (cf. Tylor, ii. 125 ff., where further examples will be found; and see art. DISEASE AND MEDICINE). The same statement holds true of possession (or obsession) by spirits and ghosts. Sometimes, as normally in Melanesia, it is the shades of the departed, rather than the *vui*, that cause the phenomena comprised under the category of possession (Codrington, 218-220); while, along the shores of Blanche Bay, New Britain, all this is caused by the *inal*, a being which is evidently a spirit, not a ghost (Meier, 'Der Glaube an den *inal* und den *tutana vurakit*,' in *Anthropos*, v. [1910] 95 ff.; see, further, both for ghost- and for spirit-possession, Tylor, i. 98, ii. 123 ff.); and in the vast domain of magic (*q.v.*) it will be found that both ghosts and spirits are among the powers controlled by magicians.

As regards the places of abode of demons and spirits, the words of Brun (in *Anthropos*, ii. [1907] 728) with reference to the African Malinke, a Mandingo stock, may serve as applicable to almost any people among whom this type of religion prevails:

'Dans la pensée des Malinkés, notre planète est peuplée d'une multitude d'esprits. Les uns résident dans des lieux déterminés, fleuves, rivières, montagnes, blocs de rochers; d'autres dans certains arbres. Le grand vent et le tonnerre sont produits par les esprits. Dans presque tous les villages, il y a un grand arbre dans lequel réside l'esprit protecteur du village.' Among the Polynesians, in like manner, Ellis (*Polyn. Researches*, London, 1832, I. 327-330) records deities (who may, however, originally have been ghosts) of the sea, air, valleys, mountains, precipices, and ravines.

It is, indeed, this very type of Nature-spirit which has in great part given rise to the theory of Animism (cf. Tylor, ii. 205 ff., and, for Polynesia especially, Waitz-Gerland, vi. 295-298). To give a complete list of such spirits would be to catalogue almost every object both in inanimate and in animate Nature—a task that would be not merely enormous, but, for the present purpose, useless, since the underlying principles are everywhere the same, and the varying details do not materially affect the cardinal doctrine involved. It will be quite sufficient, therefore, to note a few of the more prominent classes of Nature-spirits in Africa and Oceania by way of examples of the whole type.

(a) *Animals*.—Along the Slave Coast, Danhgbi, the python spirit, receives divine homage, as do crocodiles and, in Togo, leopards (the latter may, however, be the abodes of ghosts rather than of

spirits; see ANIMALS, vol. i. pp. 509 f., 520 f.), and among the Mandingo reverence is paid to serpents as divine (cf. *ib.* vol. i. p. 525 f., and art. SERPENT-WORSHIP). Yet here, too, as just noted, the difficulty of accurate distinction between spirits and ghosts confronts us, and the animal is more usually the home of the latter than of the former (cf. Tylor, ii. 7 f., 229, 378 f.; see also above, vol. i. p. 493 f.); and we must also remember that animals are often held to be god-homes, and that there are still other factors which go to make up the complex system of animal-worship (see artt. ANIMALS, TOTEMISM).

(b) *Water-spirits*.—Attention has been called in art. BRIDGE to the wide-spread belief in deities and spirits believed to be resident in rivers, and the same thing is, of course, true of larger bodies of water, such as lakes, as in the Banks Islands (Codrington, 186). To this category belongs the African Fugamu, at once the deity of the Rembo Ngoyai (a tributary of the Ogove) and the teacher of the smith's art, while dreaded demons dwell in the falls of the Congo, and the Kafirs fear the water-demons Ikanti and Uhili (Schneider, 131, 133, 137, 151 f.; Kidd, *Essential Kafir*, London, 1904, p. 10, inclines to regard the Kafir demons as ghosts rather than as spirits); thus, as Tylor sums up the matter for Africa (ii. 211; cf. also i. 108-110, ii. 209 ff.),

'In the East, among the Wanika, every spring has its spirit, to which oblations are made; in the West, in the Akra district, lakes, ponds, and rivers received worship as local deities. In the South, among the Kafirs, streams are venerated as personal beings, or the abodes of personal deities, as when a man crossing a river will ask leave of its spirit, or having crossed will throw in a stone; or when the dwellers by a stream will sacrifice a beast to it in time of drought, or, warned by illness in the tribe that their river is angry, will cast into it a few handfuls of millet or the entrails of a slaughtered ox.'

(c) *Forests and trees*.—Forests and trees likewise are the abodes of spirits. The New Britain belief in the *inal*, which, in the form of an owl, has its usual home in a tree, has already been noted, and a similar belief prevails in Melanesia (Codrington, 186 f.). For a like reason the Wanika reverence the coco-nut palm (Schneider, 159), while the Bambara also are among the many African peoples that believe trees to be tenanted by spirits (Henry, in *Anthropos*, iii. 703; for further examples, where ghosts, totems, etc., are also factors, see Jevons, ch. xvi.; Tylor, i. 475, ii. 215 ff.; and art. TREES).

(d) *Mountains*.—The African Malinke believe that the mountain at Kita is the home of malevolent spirits (Brun, *loc. cit.*), and throughout Oceania there was an abundance of mountain- and rock-spirits, some of which must, however, be reckoned as ghosts (see Waitz-Gerland, vi. 295-297, where may be found a general survey of Nature-spirits in the Pacific islands). The extent to which mountain-spirits may be specialized is well illustrated in the list of the dread deities of the volcano Kilauea, in Hawaii, thus recorded by Ellis (iv. 248 f.):

Kamoho-arili ('king Moho, or 'king vapour'), Ta-poha-i-tahiora ('explosion in the place of life'), Te-au-a-te-po ('rain of night'), Tane-hetiri ('husband of thunder'), Te-o-ahi-tama-taua ('fire-thrusting child of war')—all these being brothers; Makore-wawahi-waa ('fiery-eyed canoe-breaker'), Hiata-wawahi-lani ('thunder-rending cloud-holder'), Hiata-noho-lani ('heaven-dwelling cloud-holder'), Hiata-taarava-mata ('quick-glancing-eyed cloud-holder'), Hiata-hoi-te-pori-a-Pele ('cloud-holder embracing [or, kissing] the bosom of Pele'), Hiata-ta-bu-enaena ('red-hot mountain-holding [or lifting] clouds'), Hiata-tarelia ('wreath-encircled cloud-holder'), and Hiata-opio ('young cloud-holder')—all these being sisters of the great goddess Pele.

Prominent among the distinctly good spirits are those whose special function it is to act as guardians. From this class we must, of course, exclude the 'separable soul,' such as the *okra*, or *kra*, of the Tshi and the *luwo* of the Ewe, which is a second soul, created together with the individual whom it is to guard throughout his life (see art. SOUL); and we must also once more essay the far

¹ It must, however, be noted that Nassau regards all the spirits worshipped in W. Africa as originally ghosts ('Spiritual Beings in West Africa,' in *Journ. Amer. Geograph. Soc.* xxxiii. [1901] 389-400, xxxv. [1903] 115-123).

less easy task of distinguishing guardian spirits from guardian ghosts. To the latter class seem to belong such supernatural guardians as the Zulu *ama-tongo*, the Bantu *mizimi* and *ombwiri* (Schneider, 139 ff., 152; Hartland, art. BANTU, vol. ii. p. 360*), and the Tahitian *oramatua* (Waitz-Gerland, vi. 316); yet there are also cases where the guardian is believed to be a spirit in the strict sense of the term. Such appears to be the case in the Gold and Slave Coasts (Jevons, 165 f.; see also his whole ch. xiv.), and in Samoa and other Polynesian islands the guardian spirit was expressly declared to be a god (*aitu*), not a ghost (*varua*; see the examples collected by Waitz-Gerland, vi. 317 ff.). For further details, see artt. TOTEMISM, TUTELARY GODS.

Another important class of spirits is formed by those of prophecy, their functions being to a large extent shared, as is perfectly obvious, by ghosts. As examples of this kind of beings we may refer to a spirit dwelling in an enormous stone near Kita (Brun, *loc. cit.*), the Matabele Makalaka (Schneider, 144), and the *inal* of Blanche Bay (Meier, in *Anthropos*, v. 96 f.; cf. also Tylor, ii. 131 ff.). These spirits may simply be consulted, as at Kita, or they may enter into an individual, producing a state of ecstasy, as at Blanche Bay (see artt. ORACLE, POSSESSION). Again, it is to the agency of spirits that primitive man attributes a large proportion of his dreams (Tylor, ii. 189-191, 411; see also art. DREAMS), especially those of an erotic or nightmare character, while ordinary dreams of persons, animals, and things would normally be ascribed rather to the action of souls, whether of the living or of the dead. That demons and spirits are important factors in causing disease has already been noted (above, p. 567^a).

The presence of demons and spirits is normally revealed solely by intangible manifestations which the primitive mode of thought can explain only through the agency of such supernatural beings, as in the case of disease, dreams, many natural phenomena, and the like; but a demon or spirit is also often regarded as sufficiently tangible to leave footprints in ashes or similar substances strewn where it may be thought likely that he will come; and animals are frequently believed to be able to perceive spirits which the duller vision of men cannot discern (Tylor, ii. 196-198). Beneficent spirits, when present, are, of course, gladly entertained, and are even constrained to remain; but there is, naturally enough, a determined effort to get rid of maleficent demons. All these operations of invitation or of expulsion are part of magic (*q.v.*), and come to the front especially in case of disease (see art. DISEASE AND MEDICINE), or, from the more ethical and ritual side, in the ceremonies associated, for example, with the scapegoat in ethnic religions (see AZAZEL and SCAPE ANIMALS).

There is one class of beings that may perhaps be regarded as on the border-line between spirits and ghosts, though inclining rather to the latter category. One or two peoples preserve a tradition that they have conquered their present territory by invasion and subjugation of a former tribe of entirely different nature, and are convinced that this vanquished tribe still survives in spirit form. It is generally held that we have here one of the sources of the folk-belief in fairies, brownies, kobolds, dwarfs, giants, and the like (cf. Tylor, i. 385 ff.; *CF*, pp. 21 f., 429). To this class belong the Maori *patu-paerehe*, who lived chiefly on the tops of lofty hills, while the *taniwha* had their homes in river-holes or under cliffs, etc., where they caused such calamities as land-slips and the like (Tylor, pp. 153-157). Similar beings, explicitly called *vui*, or spirits, are believed to dwell in the New Hebrides and Banks Islands, where 'they have been seen

of late in human form, smaller than the native people, darker, and with long straight hair' (Codrington, 152 f.).

The cult rendered to demons and spirits may be discussed very briefly, for it differs in no matter of principle from that of the gods themselves. As Jevons (p. 175 f.) says,

'The method by which the negro of Western Africa obtains a *suhman* [a tutelary deity of an individual] is an exact copy of the legitimate ritual by which a family obtains a family god. . . . All over the world these private cults are modelled on, derived from, and later than, the established worship of the gods of the community. The difference between the private cult of one of these outlying, unattached spirits and the public worship of the community's gods does not lie in the external acts and rites, for these are the same in both cases, or as nearly the same as the imitator can make them. . . . The difference lies first in the division which this species of private enterprise implies and encourages between the interests of the individual and of the community, at a time when identity of interest is essential to the existence of society, and when the unstable equilibrium of the small community requires the devotion of every member to prevent it from falling.' (For a detailed study of the spirit-cult of a specific African tribe, see Henry, 'Le Culte des esprits chez les Bambara,' in *Anthropos*, iii. 702-717.)

LITERATURE.—There seems to be no special treatise on this subject, so that the material must be gleaned from the writings of missionaries and travellers in Africa and Oceania (in the older works much care is needful in distinguishing, where such distinction is possible, between spirits and ghosts or gods), from works on the regions under consideration (such as those of Waitz-Gerland and Schneider, quoted in the art.), and from general studies on Comparative Religion. Particular interest still attaches to the chapters (xi.-xvii.) on 'Animism' in Tylor, although the animistic theory is subjected to sharp criticism by many scholars of eminence.

LOUIS H. GRAY.

DEMONS AND SPIRITS (Assyr.-Bab.).—

Among the ancient Assyrians and Babylonians, as among the modern Arabs of Mesopotamia, superstition was rife, and a firm belief in all kinds of demons and *jinn* was current in every class of society. The Semitic element, when it entered Babylon, took over from the Sumerians much of their folk-lore, and it is for this reason that so many of the Assyr. words for ghouls, hobgoblins, and vampires bear their Sumerian origin patently; and out of this amalgamation sprang the elaborately developed system of magic in vogue during the later Assyr. and Bab. empires. This art provides the magician with all possible means for combating hostile devils and spirits.

The unseen enemies of mankind fall naturally into three classes. The simplest form—that of the disembodied spirit or ghost—is probably universal. The second—always supernatural—differs from gods by reason of its low order, and, as Robertson Smith says of the *jinn*,¹ is mentioned by the name of its class and not by a personal name, save in such cases as Namtar and the like, who are properly gods. Lastly, there is the half-human, half-supernatural creature, born of human and ghostly parentage—some awful monstrosity sprung from a *succuba* or *incubus*. These, too, are known by a class-name and have no individual title, whereas the higher order of this element in religion, the demi-god, is always a personality.

1. Ghosts.—We may examine, then, first in order the disembodied spirit, the ghost of a man or woman, which for some reason or other returns to this world. The Assyr. word in use is *edimnu*.² This *edimnu* was supposed to come back to earth for many reasons; it became hungry and restless, if its descendants ceased to pay it due rites or offer sacrifices on which it might feed; or it obtained no resting-place in the world of shades underground, if its earthly body remained unburied. The Assyr. ideas of Sheol were probably much the same as those of the ancient Hebrews. When a man died, his body was duly buried in the earth, and the spirit then inhabited the under world, 'the House of Darkness, the seat of the

¹ *Rel. of Sem.*, 2, 1894, p. 126.

² See Hunger, *Becherwahrungung bei den Babyloniern*, Leipzig, 1903.

god Irkalla . . . the house from which none who enter come forth again.¹ Here its food was dust and mud, doubtless eked out by the libations and offerings which percolated through the earth from the mourners' sacrifices. The blood of animals slaughtered at the grave-side trickled through to reach the hungry spirit in the under world, and hence the belief in such sacrifices. But, if the attentions of descendants towards an ancestor should cease on earth, and the spirit thus was deprived of its food, it was then driven by stress of hunger to come back to earth to demand its due. How it succeeded in breaking loose from that bourn whence no traveller returns is difficult to understand, unless we suppose that there was a dual conception of ideas arising from a confusion between the grave as the actual habitation of the dead man, and Sheol as the place of shades; probably the primitive beliefs of savages in regard to ghosts were never very definite in details, and ideas of such incorporate and invisible beings must necessarily have been indeterminate. For example, Ishtar, when she descends to the under world, threatens to break down the door of Hades:

'I will smite the door, I will shatter the bolt,
I will smite the threshold and tear down the doors,
I will raise up the dead, that they may devour the living,
And the dead shall outnumber those that live.'²

Yet in another Assyr. tablet the return of spirits from the grave is thus described:

'The gods which seize (upon man) have come forth from the grave,
The evil vapours have come forth from the grave,
To demand the payment of rites and the pouring of libations
They have come forth from the grave.'³

The word 'vapours' or 'winds' here requires some explanation. The reference is probably to the transparency of the spirits: when the spirit of Ea-bani is raised from Hades at the instance of his friend, the Bab. hero Gilgamesh, his shade rises 'like the wind' through an opening in the earth made by the god Nergal.⁴

Similarly, another incantation, although it confuses ghosts with demons, refers to the return of hostile spirits:

'The evil spirit, the evil demon, the evil ghost, the evil devil, from the earth have come forth; from the pure abode unto the earth they have come forth; in heaven they are unknown, on earth they are not understood.'⁵

In the instance of the *utukku*-wraith of Ea-bani being raised, like Samuel at En-dor, the text continues with a speech of the ghost, describing the under world to Gilgamesh:

'The man whose corpse lieth in the desert (thou and I have often seen such an one), his spirit resteth not in the earth; the man whose spirit hath none to care for it (thou and I have often seen such an one), the dregs of the vessel, the leavings of the feast, and that which is cast out into the street are his food.'

The name of the necromancer in Assyrian—*mu-selû edimmu*, 'raiser of the ghost'—is pertinent here, to show that the belief in such wizardry was accepted.⁶

Besides the unfed ghost, however, there was also the spirit of the unburied body to haunt mankind. According to Assyr. ideas, which tally in great measure with those of modern savages, if the bones of the dead were removed from the tomb, the spirit at once became restless, and was compelled to roam about the world. Ashurbanipal, giving full credence to this belief, in his invasion of Elam carries away the bones of the kings of Elam from the tombs, and causes the rites paid to them to cease, that their spirits may have no rest.⁷ Furthermore, unless the body was buried, the spirit of the dead man never reached its resting-

place in the under world; and there are long catalogues of all possible classes of ghosts to be exorcized, identified by the reason of their return to earth:

'Whether thou art a ghost that hath come from the earth . . . or one that lieth dead in the desert, or one that lieth dead in the desert uncovered with earth . . . or a ghost unburied, or a ghost that none careth for, or a ghost with none to make offerings (to it), or a ghost with none to pour libations (to it), or a ghost that hath no posterity' (or, 'that hath no name').¹ Or, if through some accident the man had died an untimely death and had not been given due burial, the same thing would happen:

'He that lieth in a ditch . . . he that no grave covereth . . . he that lieth uncovered, whose head is uncovered with dust, the king's son that lieth in the desert or in the ruins (or waste places), the hero whom they have slain with the sword.'² Those who died prematurely became ghosts also, those who perished of hunger or thirst in prison, or had not 'smelt the smell of food,' dying of want, or had fallen into a river and been drowned, or had been overcome by storm in the plains,³ those who died as virgins or bachelors of marriageable age,⁴ and women who died in travail, or while their babes were yet at the breast.⁵

This last ghost, the wraith of the woman dying in childbirth, is universal. Doughty relates that the Arab women explained the hoot of an owl as the cry of a woman seeking her lost child, she having been turned into this bird.⁶ Among the Malays a woman who dies thus becomes a *langsuay*, or flying demon, which the rest of the tribe prevent from wandering by putting glass beads in the mouth of the corpse, a hen's egg under the arm-pits, and needles in the palms of the hands.⁷ The original *langsuay* was supposed to be a kind of night-owl like the *Lilith* of Rabbinic tradition, and is therefore similar to the ghost of which Doughty speaks.⁸

Now, if any one of these disembodied spirits returned to earth, it was likely to attack any mortal who had been in some way connected with it on earth. To have shared food, water, unguents, or clothes with any one in this world rendered a patron or friend liable to a visitation from the ghost of his dead beneficiary, demanding similar attentions after death; nay, even to have eaten, drunk, anointed oneself, or dressed in company with another was reason enough for such a ghostly obsession. The living man exorcizes, through his priest, all these forms of ghost in the Assyr. incantations, threatening them that no rites shall be paid them until they depart:

'(Whatever spirit thou may be), until thou art removed,
Until thou departest from the man, the son of his god,
Thou shalt have no food to eat,
Thou shalt have no water to drink.'⁹

Many of the medical tablets give elaborate prescriptions of drugs and ceremonies to be employed 'when a ghost seizes on a man.' Others give the ritual for laying a ghost which has appeared; and in this case the magician repeats long formulæ of all possible ghosts, thereby showing, as is necessary in this magic, that he knows the description of the spirit with which he is dealing:

'A brother's ghost, or a twin, or one unnamed, or with none to pay it rites, or one slain by the sword, or one that hath died by fault of god or sin of king.'¹⁰

The fear of the obsessed man is apparently that the ghost will draw him from this world to the other, for he states in his incantation:

'O ye dead folk, whose cities are heaps of earth, whose . . . are sorrowful, why have you appeared unto me?
I will not come to Kutha [the under world]! Ye are a crowd of ghosts: why do ye cast your enchantments upon me?'¹¹

Even looking upon a corpse rendered a man liable to attacks from the ghost, and such an act demanded a long ritual to free him.¹

Were any further evidence required that the ancient Assyrians firmly believed in the possibility of visible ghosts, we have only to turn to an omen-tablet in the British Museum (K. 8693) which gives a list of the events to be expected if a ghost appears in the house of a man. But enough has been said on the disembodied spirits to show that the Assyrians were convinced of their existence, and had even reduced them to exact classes and species.

2. *Unhuman spirits.*—The second kind of demons, those entirely unhuman, for whose creation mortals are not directly responsible, existed among the Assyrians, as among other Semites, in innumerable hordes. The first of them is the *utukku*. This word is used, once at least, for the wraith of the dead man returning to earth (in the incident of Ea-bani quoted above from the Gilgamesh Epic), but elsewhere it appears to have a far wider meaning than a simple ghost, and we shall probably not be far wrong in considering it for the most part as the equivalent for a devil. It lurked in the desert, the common home of many Semitic devils, lying in wait for man; or it might have its home in the mountains, sea, or graveyard; and evil would befall him on whom it merely cast its eye.² Another, less well known, is the *gallû*, apparently sexless,³ and this is used as a term of abuse in classical Assyrian, Sennacherib calling the hostile Babylonians by such a name.⁴ The *rabîṣu* is a lurking demon, which sets the hair of the body on end.⁵ The *labartu*, *labāṣu*, and *aḥḥazu* are a triad frequently found together, the first-named having a whole series of incantations written against her. She was a female demon, the daughter of Anu,⁶ making her home in the mountains or cane-brakes of the marshes; and children were particularly exposed to her attacks. To guard them from her, the tablets inscribed with incantations against her included an amulet to be written on a stone and hung round their necks, and the inscription runs:

"Labartu, [daughter] of Anu, is her first name;
The second, "Sister of the [gods] of the streets";
The third, "Sword that splitteth the head";
The fourth, "Wood-kindler";
The fifth, "Goddess of awful mien";
The sixth, "The trusted and accepted of Irnina,"
The seventh, "By the great gods mayest thou be exorcised;
with the bird of heaven mayest thou fly away."⁷

Of the other two of this triad the *aḥḥazu* is apparently combated in the medical texts.⁸ Of the *labāṣu* practically nothing is known.

Two others are mentioned in the cuneiform tablets—the *šēdu* and the *lamassu*, the former being the name for either a guardian deity or an evil spirit. As evil, it is found in an exorcism which begins, "Spirit (*šēdu*) that minisheth heaven and earth, that minisheth the land, spirit that minisheth the land, of giant strength, of giant strength and giant tread."⁹ In this quality of evil the surrounding Semitic nations borrowed the word from Assyria—the Hebrews under the form *shēdīm*, the Aramæans as *shēda*; but it had also its beneficent side, thus approximating to the idea of a guardian angel. With the *lamassu*, which appears always as a kindly spirit, it is appealed to

⁹ Thompson, *Devils*, I., Tablet V. col. iv. l. 8 ff.

at the end of invocations, both being frequently called upon to be present after the evil spirit has been cast out.¹

In addition to the Assyrian demons specified by separate class-names, there are the 'Seven Spirits,' now well known from the following incantation:

'Seven are they! Seven are they!
In the Ocean Deep, seven are they!
Battening in heaven, seven are they!
Bred in the depths of the Ocean;
Nor male nor female are they,
But are as the roaming wind-blast,
No wife have they, no son can they beget;
Knowing neither mercy nor pity,
They hearken not to prayer or supplication.
They are as horses reared amid the hills,
The Evil Ones of Ea;
Guzalû to the gods are they,
They stand in the highway to befoul the path.

Evil are they, evil are they!
Seven are they, seven are they,
Twice seven are they!²

'From land to land they roam,
Driving the maid from her chamber,
Sending the man forth from his home,
Expelling the son from the house of his father,
Hunting the pigeons from their cotes,
Driving the bird from its nest,
Making the swallow fly forth from its hole,
Smiting both oxen and sheep.
They are the evil spirits that chase the great storms,
Bringing a blight on the land.'³

'They creep like a snake on their bellies,
They make the chamber to stink like mice,
They give tongue like a pack of hounds.'⁴

These seven spirits are undoubtedly the same as those mentioned in Lk 11²⁴, and in a Syriac charm.⁵ They are exorcised under the name of 'seven accursed brothers.' They are described in this charm as saying: 'We go on our hands, so that we may eat flesh, and we crawl along upon our hands, so that we may drink blood.' Their predilection for blood is shown in the Assyrian incantation:

'Knowing no mercy, they rage against mankind,
They spill their blood like rain,
Devouring their flesh (and) sucking their veins.'⁶

To them eclipses were due; just as the modern Semite believes that he must frighten away the evil spirits from the darkening sun or moon,⁷ so did the ancient Assyrian ascribe such a phenomenon to spirit influence. These seven spirits are said to have attacked the moon-god; and Bel, hearing what they had done, sent his servant Nuzku to take counsel with Ea against them:

'O my minister, Nuzku!
Bear my message unto the Ocean Deep,
Tell unto Ea in the Ocean Deep
The tidings of my son Sin, the Moon-god,
Who in heaven hath been grievously bedimmed.'⁸

Ea heard the message which Nuzku brought, and bit his lip in grief; he summoned his son Marduk and conveyed to him the tidings of the moon-god. [After this the tablet becomes mutilated.] When an eclipse did occur, it was held that man might be susceptible to its concomitant evils; many, indeed, are the prayers made to avert the baneful influence:

'In the evil of an eclipse of the moon which in such and such a month on such and such a day has taken place, in the evil of the powers, of the portents, evil and not good, which are in my palace and my land.'⁹

3. *Semi-human demons.*—The third class of spirit—a goblin of semi-human parentage—must be reckoned the most interesting of the three; and the evidence for belief in such a monster is well-

attested among the Semites. We must first discuss the triad called *lilá*, *lilttu*, and *ardat lilt*. The second is obviously the feminine counterpart of the first, but it is not so easy to discern what is the difference between the two last. These two—the *lilttu* and *ardat lilt*—are both female demons, the femininity of the latter being especially emphasized by the word *ardatu*, which always has reference to the woman of marriageable age. The *ardat lilt* seems to have assumed the traditional functions of the Heb. Lilith (obviously the same word as *lilttu*), who was Adam's second wife during the period of Eve's separation; and ever since that time the class of *succubæ* known by the same name have been reckoned as the ghostly wives of unmarried men. The Assyr. *succuba*, the *ardat lilt*, was forced by her desire to roam abroad by night until she found a mate. In a tablet giving a list of demons and spirits we read of the '*ardat lilt* that hath no husband, the *idlu lilt* that hath no wife'¹ (the second being the male equivalent of the first); and in another we find mentioned 'the man whom an *ardat lilt* hath looked upon, the man with whom an *ardat lilt* hath had union.'²

The Arabs believe in the same possibility. Sayce quotes as an instance that 'about fifteen years ago there was a man in Cairo who was unmarried, but had an invisible *ginna* as wife. One day, however, he saw a woman and loved her, and two days later he died.'³ The present writer met with the same form of belief at Mosul, and, while discussing *jinn* and spirits with some of the Arabs on the mound of Nineveh, was told by one of them that he knew a man who was visited by night by a beautiful woman-spirit, who had already borne him three children.⁴ The Rabbis attest the same belief in their stories of Lilith having borne to Adam devils, spirits, and *lilim*;⁵ and they held that men might have children through a *mesalliance* with a demon, and, although these might not be visible, yet they would crowd round their father's death-bed, waiting for his demise to hail him as their parent.⁶

Besides these demons, various diseases were personified in the same way. We find exorcisms against sickness beginning thus:

'Fever unto the man, against his head, hath drawn nigh,
Disease (*namtaru*) unto the man, against his life, hath drawn nigh,

An evil spirit against his neck hath drawn nigh.'⁷

Or another:

'The evil Fever hath come like a deluge, and
Girt with dread brilliance; it filleth the broad earth.'⁸

The Ninth Tablet of the series 'Headache' is similar:

'Headache roameth over the desert, blowing like the wind.'⁹ The Plague-god, *Namtar*, is best known from the story of the Descent of Ishtar into Hades. He is the 'messenger of Allat, the queen of Hades,' and, when Ishtar reaches the under world, he is sent by his mistress to smite the goddess with disease.¹⁰

Another spirit of Pestilence is *Ura*, and with this demon are connected the little amulets of inscribed clay,¹¹ written to avert evil from the house, just as the modern inhabitant of the Near East affixes Arabic charms to his walls¹² (see also CHARMS AND AMULETS [Assyr.-Bab.]).

DEMONS AND SPIRITS (Buddhist).—Demon-worship enters largely into the daily life of Eastern peoples. In India, where Buddhism arose, the popular religion, both Buddhist and Brahmanical, in common with that of Easterns generally, has concerned itself less with the prospects of happiness in a future life and the 'higher truths' of the religion than with the troubles in the present life supposed to arise from evil spirits, who everywhere infest the atmosphere and dwellings, and are regarded as the cause of all sickness and misfortune. The higher dogmatic religion and the arrangements for the future life are handed over largely to the priests; but the people themselves take an active and anxious part in counteracting the machinations of the evil spirits, of whom they live in perpetual dread.

Buddhism from its very commencement appears to have accepted the Hindu mythology, with its evil and good spirits, as part of its theory of the universe. Śākyamuni himself seems to have taken over from the Brahmanical teachers of his time, amongst other tenets, the current belief in the gods and demons of the Indian pantheon, and he is represented in the more authentic early texts as referring to these beings as objects of fixed belief. He also accepted the current Brahmanical view that, like all other living things, they were impermanent and ultimately subject to death and endless re-birth, many of them having in previous existences been men. Thus, the gods and demons, being incapable of saving themselves from death and the misery of re-birth, could not be expected to save man; and so Buddha declared that their worship was one of the things which are not profitable and therefore unnecessary, and that he himself as 'the Perfectly Enlightened One,' or the Buddha, was superior to all divinities. Nevertheless, as these gods and demons were still believed to be capable of doing harm as well as good to man, though they could not effect his spiritual salvation, they continued more or less to be objects of popular worship even in early Buddhism, as is seen in the most ancient monuments.

Whether Buddha himself seriously believed in these divinities may be doubted. Yet the earliest texts agree in ascribing to him the statement that he descended from 'the heavens of the 33 gods,' in order to save mankind. Moreover, in the early Jātaka tales of his imaginary previous existences, he claimed to have been one or other of the gods in former times, mentioning himself 4 times as Brahmā (the most exalted of all at the epoch of Buddha), 20 times as Śakra or Indra, 43 times as a tree-god, and once as a fairy. In his *sūtras*, or sermons, the god Brahmā is referred to as one of the most frequent of his auditors. And the culminating episode of Śākyamuni's career—the attainment of Buddhahood at Gaya—is universally represented as a personal struggle with Māra, the Satan of the Buddhist world, and his daughters, Desire, Unrest, and Pleasure. This event is regarded by Buddhists generally not as an allegory, but as an actual bodily temptation and a conflict with manifested evil spirits.

The Buddhist pantheon thus had for its nucleus the polytheistic Brahmanical one, which embodied a physiolatry, or worship of the personified forces of Nature. It soon, however, became much more extensive: (1) by the creation of new deities and spirits of a special Buddhist type, personifying abstract conceptions of that religion; and (2) by the wholesale incorporation of much of the contents of the aboriginal pantheons of those peoples outside India over which Buddhism extended its conquests as a 'world-religion.' In this way the Buddhist pantheon has become the largest in the world, especially in its array of demons and spirits.

The distinctively Buddhist demons and spirits of Indian Buddhism, while generally modelled on the type of the Brahmanical, are specifically different from these in their functions, in their appearance as pictured and sculptured, and in their outward symbols. They range from the modes of their prototype Rudra (Śiva) in his destructive mood, through the *asuras*, or Titanic demons, to the *rākṣasas* and *piśāchas*, the most malignant fiends. To these classes may be relegated most of the non-Brahmanical spirits mentioned in the early Buddhist texts or figured in the early sculptures. Some of these supernatural beings, although unknown to Brahmanical texts, may have been local Indian spirits, not necessarily Buddhistic, e.g. the famous she-devil Hārītī. Māra, the personified Evil Principle and tempter of man, presents a close analogy to the Satan of the Bible, although he was not a fallen angel in the literal sense; nor was he, like Ahri-man of the Persians, an antagonist of equal power. Though unknown by that name to the Brahmins, he is manifestly a form of the Indian god of death, Yama (Skr. *mar*, 'to die'), and in other aspects he resembles the god of sensuous desire (*kama*).

As Buddhism extended its range outside its monastic order and became a religion of the people, it gave greater prominence to these supernatural beings, in which the people implicitly believed, and began to create special divinities of its own. These new divinities and demons it figured in special conventional attitudes, with characteristic symbols, which at once distinguished them from the Brahmanical; and the laity were made familiar with the conventional appearance of the leading ones by means of the frequent sacred plays and masked dances. These various spirits are not classed in any definite systematic order in the Indian Buddhist texts, but they are often enumerated as follows:

(a) *Celestial Bodhisattvas*, of a divine or demoniacal Śālvite type, e.g. Avalokita, and Vajrapāṇi. (b) *Nāgas* and *Mahoragas*, snake-like or dragon beings, resembling clouds, living in the sky or under water, their maidens assuming siren-like shapes, often evil spirits: e.g. Muchilinda, who shielded Śākyamuni under the Bodhi tree at Gaya. (c) *Yakṣas*, genii often friendly to man: e.g. the *yakṣa* Vardhana (= 'Increase'), who was the guardian of Buddha's family and tribe at Kapilavastu. (d) *Asuras* (lit. 'ungodly' spirits), giant demons, headed by Rāhu, the personified eclipse. (e) *Rākṣasas*, ogre-fiends capable of assuming siren-like forms; *daityas*, *kumbhāṇḍas*, *piśāchas*, and *pretas*, or starveling ghosts, spectres, vampire-ghouls: e.g. Piṅgala. (f) Malignant fiends of hell and the soil.

Many of these evil spirits, like the *δαίμονες* of the Greeks, might become friendly and good genii to their human votaries. The exorcizing or coercing of the actively harmful amongst these evil spirits, by means of certain *sūtras* spoken by Buddha or stereotyped sentences culled therefrom, seems to have been practised from very early times, possibly even from Buddha's own day. The right-hand disciple of Buddha, Maudgalyayana, is generally credited in the early scriptures with having exorcized evil spirits in this way; and the recital of such *sūtras*—the so-called *Paritta*, or '*Pirit*' service—is the most favoured and popular way of combating sickness and misfortune at the present day amongst the 'Southern' Buddhists; whilst in 'Northern' Buddhism such procedure is still more widely developed.

In later times the Indian Buddhist pantheon—itsself an offshoot of the Brahmanical, and living side by side with it—continued to develop along lines similar to those taken by its parent. Thus, in the extreme pantheistic phase it evolved a supreme primordial Buddha-god existing from everlasting to everlasting, the Adibuddha (q.v.). The rise of the devotional spirit, with its craving for personal deities to whom intimate prayer could be addressed—the *Bhakti* phase, resulting in the introduction into Brahmanism of Śiva, Viṣṇu, Kṛṣṇa, Rāma, and others, with their female

energies (*śaktis*)—was echoed in Buddhism by the creation of a host of celestial Bodhisattvas, male and female, e.g. Mañjuśrī and Tārā. These were able and willing to assist those who invoked them as personal gods (*vidam*); and some of them (e.g. Marīchi) were fiendish in type. Similarly, with the innovations of *Yoga* and the degraded Tantra developments, certain sections of the Buddhists kept pace with these by parallel movements which added to the Buddhist pantheon.

The extreme Tantrik phase termed *Kālachakra*, or 'Wheel of Death,' about the 10th cent. A.D., introduced a rampant demonolatry, with exacting priestly rites, into a religion which in its origin was largely a protest against worship and ritual of every kind. The majority of these demons were monstrous 'king-devils' of the most hideous Śaivite type, with their equally repulsive spouses. The chief were Vajra-bhairava, Saṃvara, Hayagrīva, and Guhya-kāla. Their function was to be tutelaries (*vidam*) to guard their human votary against the attack of the swarms of minor demons, whilst they themselves were to be gained over to perform these friendly offices by the coercing power of Buddhist spells. Certain of them were also specially selected as 'defenders of the faith' (*dharma-pāla*), and also as guardians of particular monasteries and particular sects.

At the present day, such extravagant demonolatry prevails to a greater or less extent throughout the Mahāyāna (or 'Great Vehicle') form of Buddhism in China, Korea, and Japan; but most of all in Tibet (see 'Tibetan' art. below) and Mongolia. The demonolatry of the 'Southern' Buddhists in Burma, Ceylon, and Siam is of the earlier and less rampant type.

L. A. WADDELL.

DEMONS AND SPIRITS (Celtic).¹—*Introductory*.—In the case of Celtic countries it is not always easy to draw a clear line of distinction between the beneficent and the maleficent types of those supernatural beings that cannot be counted in the ranks of definite individual gods and goddesses. There are, indeed, imaginary beings in Celtic folk-lore that are predominantly of a maleficent disposition; but the majority of these beings are, like human beings themselves, of mixed character. The term 'demon' in English has acquired a precision of meaning, as applied to maleficent supernatural beings, which makes it a difficult term to employ in describing the conditions reflected in the religion and folk-lore of the Celts. Again, the term 'spirits,' so far as the facts of Celtic folk-lore are concerned, must be used in a somewhat wide sense, and, in some measure, its use is bound to overlap that of 'demon,' since it is difficult, in the folk-lore of Celtic countries, to draw very clear lines of distinction between the different types of beings which the Celtic imagination has created. The clearest and broadest line of demarcation, perhaps, that would meet the case would be that separating the actual living beings, both animal and human, which people the visible tangible world of everyday life on the one hand, and, on the other, those unreal beings which are imagined as living normally a life hidden from view in those localities and recesses of the earth which easily lend themselves to concealment (such as caves or hollows, or some supposed subterranean, sub-lacustrine, or sub-marine region), or in islands of the sea (actual or

¹ Cf., throughout, art. CELTS and COMMUNION WITH DEITY (Celtic).

imaginary), or in some wild and inaccessible tract of land, or in the depths of a great forest. Further, the lives and actions of these imaginary beings are pictured as being governed by conditions that may be summarily described as magical—conditions entirely at variance with the facts of human experience, but which have, none the less, occasional points of resemblance to those of ordinary existence. Moreover, the beings which are imagined as living under these abnormal conditions are thought of as endowed with abnormal powers; hence, in the Celtic world, they are viewed as equipped with various forms of magic skill, and are thereby specially associated with those human beings who are thought to have similar endowments. Nor is it always easy to distinguish, among these beings of the Celtic Other-world, (a) those which may be regarded as survivals from primitive Animism, such as the animate 'spirits' of inanimate things; (b) those which are ancient spirits of vegetation; (c) those which are beings imaginatively considered necessary as dwellers in a hypothetical Other-world; and (d) those which are exclusively regarded as the souls of departed human beings. In all parts of the Celtic world, as in other countries, there are ghost-stories, wherein the ghost is viewed as that of a particular human being; but very often the relationship of a ghost to an individual man or woman, whose soul it was, sinks into the background of the story, and the ghost is made to act like some other type of imaginary supernatural being. The various types, both in form and character, often merge into one another.

Again, one of the characteristics of the Other-world of the Celts, which may be said to follow as a corollary from its contrast with the normal world, is that the beings supposed to people it do not, like those of the actual world, keep their own forms, but undergo various transformations. Hence it is not always possible to distinguish clearly between those of animal and those of human form, inasmuch as those of one form may pass into a form that is usually characteristic of the other, and, along with the change of form, there may also be a change of character or disposition. Consequently a being which might appear as a demon, in the English sense of the term, at one time, might at another conceivably be represented in some other form as a benign spirit. In some degree, perhaps, the absence of definiteness of character¹ in question may be the reflexion in Celtic folk-lore of certain human types, which are not unknown in Celtic experience, where qualities that are in the highest degree laudable are combined with others that are glaringly out of harmony with them, as, for example, the combination of a highly temperate and devout life with constant unpunctuality or frequent remissness in the keeping of promises and engagements. The inhabitants of Celtic countries have not, as a rule, been sorted out, during a process of severe and relentless moral drilling, into distinct and fixed ethical classes to the same extent as the inhabitants of some Teutonic lands; and the prevalent ethical conditions in Celtic society are naturally in some degree reflected even in Celtic folk-lore.

Another point, again, which deserves consideration is that, in Celtic folk-lore, the beings whose normal home is the Other-world are far from being rigidly confined to that region, but are represented as coming to view in the actual world either by day or by night—in current folk-lore preferably by night. They are regarded as appearing either

singly or in groups; and those to whom they appear may see them either as solitary spectators or in company with others. They are also represented as entering into various dealings with normal human beings, and among the relations included in folk-lore narrative is that of inter-marriage. Further, just as the beings of the Other-world may enter this world, the men of this world may enter the Other-world, whether by invitation, accident, or invasion. Many Celtic legends, such as *Tochmarc Étaíne* ('The Betrothal of Étaíne') in Irish, and the story of *Pwyll, Pendefig Dyfed* ('Pwyll, Prince of Dyfed'), in Welsh, are largely based upon belief in inter-relations between the two worlds of the type in question. Christian teaching and the spread of education have done much to assimilate the Celtic consciousness, in the matter of belief in imaginary beings, to that of advanced civilization; yet enough of the ancient psychological attitude of the native Celtic mind still exists to enable one to form a fair estimate of the extraordinary hold which this belief must have had upon the mind in ages further back.

1. Celtic demons and spirits in antiquity.—A large number of the names of Celtic deities that have survived (for the most part on inscriptions) are names which occur but once, and consequently they may be regarded as probably the names of local deities or local tutelary spirits. Sometimes the name is clearly identical with that of some town, river, or mountain (see the present writer's list of 'Ancient Celtic Deities,' in *Trans. Gaelic Soc. of Inverness*, 1906); in other cases, the origin of the name is unknown. About two hundred and sixty names, which occur only once on inscriptions, have come down to us, and there were at one time, doubtless, many more. Along with these individual names there existed others of grouped supernatural beings, such as (a) the *Bacucci*, of whom Cassian (*Conlat.* vii. 32. 2) says:

'Alios ita eorum corda quos ceperant inani quodam tumore videmus infecisse, quos etiam Bacuceos vulgus appellat, ut semetipsos ultra proceritatem sui corporis erigentes nunc quidem se in quosdam fastus gestusque sustollerent, nunc vero velut adlines ad quendam se tranquillitatis et adfabilitatis statum communes blandosque submitterent, seseque velut illustres et circumspicibiles omnibus aestimantes nunc quidem adorare se potestates sublimiores corporis inflexione monstrant, nunc vero ab aliis se crederent adorari et omnes motus quibus vera officia aut superbe aut humiliter peraguntur experient.'

(b) The *Castææ* or *Castæci* are known to us only from an inscription from Caldas de Vizella (*CIL* ii. 2404: 'Reburrius lapidarius Castæcis v.l. [s] m.'), and similarly (c) the *Icotii* or *Icotiæ* are mentioned on an inscription at Craviers, Dép. Gard (*CIL* xii. 2902: 'Icotiis'), while (d) the *Dusi* are mentioned by three writers, who all appear to view them as maleficent. The word *dusios* in Celtic probably meant an unclean demon or *incubus*, but the root of the word is not improbably cognate with that of the Greek *θεός* (where *θ* stands for an original *dh* which would become in Celtic *d*), and suggests that, at one time, the character of these beings was regarded as beneficent or neutral.

The passages relating to the *Dusi* are the following: Augustine (*de Civ. Dei*, xv. 23): 'Quosdam daemones, quos Dusios Galli nuncupant, adsidue hanc immunditiam et tempestatem et efficeret, plures talesque adseverant, ut hoc negare inopudentiae videatur.' Similarly, Isidore (*Or.* viii. 11, 103): 'Pilos, qui Graece Panitæ, Latine Incubi appellantur. . . . Saepe improbi existunt, etiam mulieribus, et earum peragunt concubitus, quos daemones Galli Dusios vocant, quia adsidue hanc peragunt immunditiam'; *ib.* 104: 'Quem autem vulgo Incubonem vocant, hunc Romano Faunum Ficarum dicunt.' Further, Hincmar (*de Divortio Lotharii*, l. 654, ed. Sirm.) says: 'Quaedam etiam feminae a Dusii in specie virorum, quorum amore ardebant, concubitus perutilissime inventae sunt.'

(e) The *Ifles* are a group of male gods, whose name occurs on an inscription at Dormagen, in the region of Düsseldorf (*Corp. Inscr. Rhenanarum* [*CIR*] 292: 'Ifibus Marcus et Atius v.s.l.l.m.'), that were clearly regarded as beneficent. (f) The *Nervini* or *Nervinae* were probably a tribal group

¹ In the case of the Welsh fairies, for example, the elements of beneficence and maleficence, as the folk-lore stories about them show, are curiously blended in their characters. They are represented as being at times helpful to man, at other times as mischievous and vindictive (see Rhys, *Celtic Folklore*, vol. I. *passim*).

of beneficent deities or spirits that were connected with the tribe of the Nervii. In one case we have, as the name of a group of deities that were regarded as beneficent, the plural of one of the most widely diffused of Divine names in the Celtic world, namely (*g*) *Lugoves*, the plural of *Lugus*.

This plural form occurs on the following inscriptions: (1) at Osmâ, in the territory of the Celtiberi (*CIL* ii. 2818): 'Lugovibus sacrum L(ucius) L(ucius?) Urco collegio sutorum d(omi)u(m) d(edi)t'; (2) at Avenches, in the territory of the Helvetii (*CIL* xiii. 5078): 'Lugoves'; (3) at Bonn (*CIL* 469): 'Do[m]esticiis [Lugo]vibus. . .'

Other beneficent spirits are (*h*) the *Di Casses*, who are mentioned on inscriptions as follows:

(1) At Lorsch (*CIL* 1386): 'Cass[s]ibus pro sa[al]ute dd[omi]norum duorum nn[on] (ost)rorum'; (2) at Ober-Klingen, in Hesse-Darmstadt (*CIL* 1398): 'Cassibus vota fecerunt Macellu[s] Faustinu[s] m(erito) p(oserunt)'; (3) at Landstuhl, Pfalz (*CIL* 1779): 'Diss (sic) Cassibus Matulinus v.s.l.m.'; (4) at Neustadt, on the Hardt: 'Dis Cassibus Castus Taluppe v.s.l.l.m.'

Another group of beings that corresponded to the type in question was that of (*i*) the *Di Silvani*, to whom, along with their female counterparts the *Silvanae*, there is a reference on an inscription at Barcelona (*CIL* ii. 4499: 'D(is) d(eabus) Silvanis M. Antonius Cr[isp]escens v.s.l.m.'). This is the only certain instance of a group of male gods of this name. By far the most common groups of supernatural beings mentioned on inscriptions in connexion with Celtic districts are (*j*) the *Matres* and (*k*) the *Matronae*, while there are smaller groups of (*l*) *Prociuae* and (*m*) *Junones*. These 'Mothers' and 'Kinswomen' seem to have been regarded as the protecting deities of various localities; and their worship appears to have been prevalent, not only among the Celts, but also in certain Teutonic tribes (see an article by the present writer on 'Celtic Goddesses' in *CeR* for July 1906, and art. CELTS, vol. iii. p. 280). These goddesses probably represent a very early phase of Celtic religion, and are to be regarded as more akin to groups of spirits (possibly corn-spirits) than to the individualized deities of a later stage. There is a remarkable parallel to them in one of the current Welsh names for a type of beneficent fairy, namely, *Y Mamau*, 'the Mothers,' used in some parts of S. Wales as a name for the fairies in the expression *Bendith y Mamau*, 'the blessing of the Mothers,' and also found in the name of a well-known hill of the Clwydian range, *Y Foel Famau*, 'The hill of the Mothers.' Cf. art. DEE MATRES. To the foregoing may be added (*n*) the *Niskai* ('water-nymphs') mentioned on the Amélie-les-Bains tablets (COMMUNION WITH DEITY [Celtic], vol. iii. p. 748*).

2. Demons and spirits in mediæval times.—From the foregoing account it will be seen that, in the Celtic countries of antiquity, a belief was held, not only in certain individual gods and goddesses, both local and non-local, bearing names of their own, but also in groups of supernatural beings, who, by the very fact that they were nameless, may be regarded as beings in a sense on a lower plane than the named deities, and so may be fitly included, for the most part, in the category of demons and spirits. How far they may have been considered as the indwelling spirits of inanimate things, or as the spirits of vegetation, or as the souls of dead ancestors, animal or human, it is impossible to say. The Celts, like other nations of antiquity, doubtless believed in the existence of spirits of human beings, which were, in some mysterious way, connected with the breath, the name, and the shadow. Like the Greek *skia* and the Latin *umbra*, the Welsh term *ysgawd* ('shadow'), for instance, was used for the soul. The more usual Welsh word, however, for the soul is *enaid*, a derivative of the root *an-*, 'to breathe.' In mediæval Welsh this term is constantly used in the sense of 'life,' but the meaning 'soul' is also frequent. There are traces, too (Rhys, *Celt. Folk-*

lore, iii. 601-604), of a belief that the soul might take on the bodily form of some animal, such as a lizard. In the Middle Ages, Christianity had introduced, both into Goidelic and into Brythonic speech, certain terms of Greek and Latin origin, such as Ir. *diabul*, Welsh *diabl* (in a later form *diafol*), from *diabolus*; together with such forms as Ir. *demon*, 'demon,' and Welsh *cythraul*, the latter being derived from Lat. *contrarius* through **contralius* (where *l* has been substituted for *r* by dissimilation). The Ir. *spiorad* (older *sprut*), 'spirit,' and the Welsh *ysbryd* of the same meaning, both come from Lat. *spiritus*. At the same time other terms of native origin for the supernatural beings of folk-lore survived, such as Ir. *side* and *aes side*, 'the fairies,' whence the term *ban side* ('banshee'), which means literally 'woman-fairy.' The oldest Welsh term used in mediæval Welsh for a fairy is *hud*, together with its derivative *hudol*, in the same sense, for a male fairy and *hudoles* for a female fairy. *Hud* also means 'magic,' and this use of the same term for both fairy-land and magic well illustrates the inseparable connexion, for the Celtic mind, of magic with the Other-world.

In Irish legend there are many allusions to the *side* (as, for instance, in *Serglige Conculaind* ('The Sick-bed of Cúchulainn' [Windisch, *Irische Texte*, Leipzig, 1880-1905, I. 214 f., 227]); and in *Tochmarc Étaíne* ('The Betrothal of Étaíne' [ib. pp. 120, 131]). In one passage of the latter a fairy domicile (*sid*) is definitely associated with *Brig Lúith*, 'the hill of Liath (mac Celtaichair)', the Irish counterpart of the Welsh Llwyd, son of Kilcoed, a famous magician, twice mentioned in the *Mabinogion*, and once by the Welsh 14th cent. poet, Dafydd ab Gwilym. In the *Book of Armagh*, the *side* are called 'dei terreni,' and they appear to have been regarded as dwelling either in hills or on islands such as Mag Mell. In the latter case, one of the means of journeying to them was in a ship of glass. Some of the fairies were regarded as male (*fer-side*), but they were more often regarded as female (*ban-side*). The legendary characters, Mider (*Tochmarc Étaíne*, in Windisch, *Ir. Texte*, p. 121 ff.) and Manannán mac Lir (*Serglige Conculaind*, 225), were associated with them, and, in the latter story, two of their kings bear the names Faibé Find and Labraid. When pictured as women, they were represented as being clothed in white raiment. In the story of Condlia Caem (given in Windisch, *Ir. Gram.*, Leipzig, 1879, pp. 118-120) they are described as wishing to carry off mortal men into their land of perpetual youth, or to marry mortals; thus Étaíne, a fairy princess, married Eochaid Airem, and was carried back later on to fairy-land by Mider, a prince of the fairies. The connexion between the *side* and the Tuatha Dé Danann of Irish legend is very obscure.

In Irish legend there was one native term for a supernatural being which was apparently always of maleficent import, namely, *stabrae* (*Leabhar na hUidhre*, 113^b 41, 114^a 12, 115^a 32). This word is undoubtedly the phonetic equivalent of the Welsh *hwylfar*—a term no longer used except in the Welsh original of Guinevere, namely, *Gwenhwylfar*, a name which must originally have meant 'the white phantom.' This appellation would suggest that *hwylfar* had not originally in Welsh the connotation of malignity, which *stabrae* seems to have acquired in Irish.

In mediæval Welsh the name *hud* in the sense of 'fairy' is applied in the *Black Book of Carmarthen* (Poem xxxiii. l. 17) to Gwyn, son of Nudd (*Gwyn*=Ir. *Find*; *Nudd*=Ir. *Nuada*); and his mistress is said to be Creudhílad, the daughter of Lludd (the Welsh original of Geoffrey of Monmouth's Cordelia, daughter of King Lear). In the story of *Kulhwch and Olwen*, Gwyn is represented as fighting every first of May until the Day of Judgment with Gwythyr for the hand of Creudhílad. In the poetry of Dafydd ab Gwilym, which reflects the current Welsh folk-lore of the 14th cent., Gwyn is regarded as in some sense the leader of the 'fairies,' since they are called by the poet *Tylwyth Gwyn* ('the family of Gwyn') in two passages. The Welsh picture of fairy-land given by the poet by no means represents it as a 'land of eternal youth,' since among its dwellers are mentioned *gwrachod* ('hags'), nor can it be said that the picture given of its inhabitants suggests their beneficent character.

The expression *Y Tylwyth Teg* ('the fair family') for the fairies is found in the poems of Dafydd ab Gwilym (middle of 14th cent.), and the term itself would seem to imply that, in the main, their disposition was originally viewed as beneficent and their appearance pleasing, though the poet describes the colour of one of them as brown (*gwynu*). At the same time the allusions to them in Dafydd ab Gwilym well illustrate the statement made at the beginning of the article, that it is difficult to assign a hard and fast type of character to several of the beings of the Celtic Other-world. For example, the

term *pegor*, used for 'a pygmy,' and for the fabulous dwellers in submarine regions (*Bl. Book of Carmarthen*, Poem v. l. 4)—a term found also in Dafydd ab Gwilym (Poem lxxv.)—is one of a neutral type; and so is *corr*, 'a dwarf'—a word which occurs several times in the *Mabinogion*. In some cases a *corr* is represented as acting in a brutal and churlish manner (as in the story of *Geraint and Enid*), but in the story of *Peredur* the narrator appears to view the dwarf and his wife sympathetically. The name of the mythical tribe called the *Coraniaid*, in the story of *Lludd and Llewelyn*, probably means 'the pygmies,' and they are certainly represented as intellectually acute but morally malicious.

Side by side with these beings of neutral or variable disposition, Welsh folk-lore in the Middle Ages, like that of Ireland, deals with certain types of beings that can only be regarded as 'demons' in the ordinary English sense. The term *ellyll*, for example, appears to be nowhere used in Welsh literature in a good sense.¹ In the Welsh triads (*Oxf. Mab.*, 1887, pp. 305, 306) there are references to *ellyllon* (pl. of *ellyll*), called 'the three forest-demons of the Isle of Britain' and 'the three stag-demons of the Isle of Britain,' but the precise significance of these names is not explained. In some of the instances given, the word *ellyll* is followed by a personal name, as in the phrase *ellyll Gwidawl* ('the demon of Gwidawl'). It is possible that, originally, the term *ellyll*, in expressions such as these, may have denoted a person's 'familiar spirit.' In Dafydd ab Gwilym, *ellyllon* are represented as 'wry-mouthed' (*mingeimion*), as haunting dingles, and as being foul and ill-grown. This picture of them is implied in the description of the owl as *ellylls adar* ('the female demon of birds'). The same writer has another term for a certain kind of goblin or ghost, namely *bwbach*—a term which clearly implied an object of terror. He calls his shadow, for instance, 'a goblin (*bwbach*) in the form of a bald monk,' while, further, he uses the verb *bwbachu* in the sense of 'to frighten as a ghost.' A term used for a kind of female demon by Dafydd ab Gwilym and others is *Y Dera* (probably meaning originally 'the red one,' *dera* being phonetically equivalent to *Ir. derg*, 'red'). For ghosts, too, the term *gwylliaid* appears to be used by this poet (e.g. in Poem clix.), but the more usual mediæval term is *gwyllon*. This term appears to have been used for 'the ghosts of the dead' (*Bl. Book of Carmarthen*, Poem l. l. 85). The departed spirits of warriors seem to have been proverbially associated, even in mediæval Wales, with the Caledonian forest (*ib.* l. 36; also, *ib.* Poem xvii. l. 67). In a Welsh mediæval poet, Llywarch ab Llywelyn (*Myvyrian Archaeology*², Denbigh, 1870, p. 212a), there is an allusion to *gwyllon Kelyddon* ('the ghost of Caledonia'), as if this were a proverbial expression, and, when Arthur is represented as making an expedition (in the story of *Kulhwch and Olwen*) to the 'wild land of hell,' he is described as going to the North.

The abodes of the supernatural beings here described are, in the main, located in *Annwfn* or *Annon*—a term most probably derived from *an-*, 'not,' and *dwfn* (cognate with *Ir. domun*), 'the world.' The dominant conception of *Annwfn*, therefore, was as a kind of magical counterpart of this world, and the Welsh mind in the Middle Ages associated with it the idea of illusion and want of substantiality. Dafydd ab Gwilym, speaking of a mirror as fragile and perishable, says of it that it was constructed by fairies (*hadolion*), and other references by him of the same type point in a similar direction. Hence, *Annwfn* appears to have meant 'a world which is no world.' *Annwfn* was usually regarded as being located beneath the earth, but certain poems of the *Book of Taliessin* (14th cent.) appear to regard it as consisting of a cluster of islands, to which Arthur journeys in his ship *Prydwen*. One poem in the same MS calls it 'Annwfn beneath the world' (*is chlyd*), and in keeping with this is the description of it by Dafydd ab Gwilym as 'the deep land of Annwfn,' to which the Summer is said to have gone during the months of Winter. According to the story of *Pwyll, Prince of Dyfed*, *Annwfn* was divided into kingdoms, whose boundaries were sometimes streams, as in the upper world. Inter-relations and inter-marriage were conceived as possible between the beings of the two worlds, and the boons of human civilization, at any rate in the form of swine, were thought to have come into the actual world from *Annwfn*. The relations, however, between the two worlds were not always necessarily amicable, and, just as heroes from the actual world might make expeditions into *Annwfn*,

¹ In the current folk-lore of some Welsh districts it appears that even an *ellyll* can be conciliated and made to bestow prosperity, if the candle is left burning on going to bed (Wirt Sikes, *British Goblins*, p. 15).

so beings from *Annwfn* might make raids upon this world. Such a raid appears in mediæval Welsh to have been called *gormes* (lit. 'an overflow,' then 'oppression'). Certain raids of this kind are suggested in various parts of the *Mabinogion*; for example, in the carrying away of the infant Pryderi, in the raid upon Teyrnor's foals, in the narrative of Manawyddan and the mice, and in the story of *Lludd and Llewelyn*, as well as in the stealing of Mabon, son of Modron, from his mother. In these raids certain fabulous packs of hounds took part, which are sometimes called *Cwn Annwfn* ('the dogs of Annwfn'), and, by Dafydd ab Gwilym, *Cwn gormes* (Poem xlii.). There appear to be no beings of the vampire type among the supernatural beings of Irish and Welsh mediæval legend, but in Breton stories the werewolf (*bisclavaret*) seems to have played a part even in mediæval times.

3. Demons and spirits in Celtic lands to-day.—

In the remoter parts of Ireland, Scotland, Wales, and Brittany there is still a considerable survival of the older psychological attitude, especially in the sphere of the emotions, towards the supernatural beings of which Celtic folk-lore treats. The teaching of Christianity, whether by Roman Catholics, Anglicans, Presbyterians, or other religious denominations, for example, as to the lot of the dead, runs entirely counter to the belief in ghosts that are free to wander at random among the living; nevertheless, the fear of ghosts is a very real terror to many people, after nightfall, in Celtic as in other countries. So far as the period of daylight is concerned, the older frame of mind may, with the exception, perhaps, of the inhabitants of the least progressive Celtic regions, be said to have been completely modified through education and experience. With the advent of darkness, however, this older frame of mind tends to assert itself in consciousness—not, perhaps, so as to produce beliefs which their holder would regard as justifiable, but to a sufficient extent to perturb the emotions, especially in the presence of some uncanny or weird-looking object. In Ireland and the more secluded parts of the Highlands and Islands, there has been, on the whole, less of a breach of continuity with mediæval times than in Wales; and the same may be said of Brittany. Hence the beliefs of the Middle Ages form substantially the ground-work of the present-day attitude towards demons and spirits as it prevails in those regions. The Isle of Man, too, may be regarded as belonging, in the main, to the same psychological zone as Ireland. In the latter it is the 'Fairies' still, as in the Middle Ages, that are the chief supernatural beings of the type here considered; but, side by side with them, there subsists, in Ireland as elsewhere, the belief in the re-appearance of the ghosts of the departed, and also in the appearance of fabulous creatures, such as the *Puca*, the *Leprachaun*, the Water-bull, the Water-horse, and the like (see T. Crofton Croker, *Fairy Legends*). As to Gaelic Scotland, there is abundant material for the student of the modern Celtic mind in Campbell's *Tales of the W. Highlands*.

These tales describe such beings as the *glashan* (the Manx *glashyn*), which was a hirsute sprite that rebelled against clothing, and, in this respect, resembled the *gruaqach*, a similar sprite from Skipness. One of the tales (no. 100) describes an underground world of giants, and an earlier tale (no. 93) similarly points to a belief in gigantic beings. Another tale (no. 33) speaks of a monstrous being called *Eitidh MacCallain*, 'who had one hand growing out of his chest, one leg out of his haunch, and one eye out of the front of his face.' Other tales describe fairies, sleeping giants, flying ladies, mermaids, brownies, and the like, while not a few of the stories speak of such beings as the Water-horse or Water-kelpie (sometimes transformed into a man), the Water-bull, the Water-bird called the *Boobrie* (said to inhabit the fresh-water and sea lochs of Argyllshire), dragons (thought to haunt Highland lochs), and the Water-spirit called the *Fougha*. The Water-bull is generally

represented as the foe of the Water-horse and the friend of man. There are also stories of demons appearing as goats and dogs. It will readily be seen how this mass of Gaelic folk-lore has been coloured by the geographical conditions of the Western Highlands, and what is here true of the folk-lore of the Highlands is true of the folk-lore of all Celtic countries. In the Isle of Man the same essential beliefs are found as in the Western Highlands. The island had her fairies and her giants, her mermen, her brownies, her Water-bulls, and her Water-kelpies or Water-colts. The Water-bull (*tarroo ushtey*) haunts pools and swamps, and is the parent of strangely formed beasts and monsters. The Water-kelpie has the form of a grey colt, and wanders over the banks of the streams at night. The Manx name for a giant is *foater* (from the same root as the Ir. *fomhor*). For a brownie the Manx name is *fenodyree*, and this being appears to resemble the Welsh *ellyll* in being a hairy and clumsy creature. There are also in Manx folk-lore beings called *glaishtig* and *glaisrig* respectively, (the former being a she-goblin, which takes the form of a goat, while the latter is described as a female fairy or a goblin, half-human, half-beast. The nearest approach to a vampire in Celtic folk-lore is the Water-colt, which is thoroughly vicious, and sucks the blood of maidens. Possibly to the Water-colt should be added certain Welsh fairies said to eat infants (Rhys, *Celtic Folklore*, ii. 673).

In Wales, the firm stand made against all forms of superstition by the strong Protestantism of the country, especially since Nonconformity has penetrated into every corner of the Principality, has, to a very great extent, shattered to pieces the mental attitude towards the Other-world which we find so clearly represented in the *Mabinogion* and in *Dafydd ab Gwilym*; but in remote districts, such as the Lleyn district of Carnarvonshire and the Welsh parts of Pembrokeshire, as well as in the more secluded portions of other counties, the old spirit still prevails among the unlettered, and not a few people retain a kind of working belief in the beings that may be roughly classified as demons and spirits. The spirits of the dead (called *buganod* and *ysbrydion*) are still feared in such districts,¹ and tales concerning them abound. Every uncanny-looking portion of a lane has its ghost, and from caves they are rarely absent. Fairies are still known in most regions of Wales as *Y tylwyth teg*, but the term *Annwn* has gone out of use, except in the expression *Cwm Annwn*, 'the dogs of Annwn.' In Pembrokeshire, fairies were even in the 19th cent. supposed to attend the markets at Milford Haven and Laugharne. For ghosts the term used in some districts is *bugan*, while in others the terms in use are *bwci* and *bwbach*. It is not improbable that one old term was *buga*, which is found in the Welsh name of the town of Usk in Monmouthshire—*Brynbuga*; while, in Glamorganshire, the name seems to take the form *bica*, found in the farm name *Ty Fica* ('the house of Bica'). The Welsh word *coblyn*, used especially of the sprites that are thought to haunt mines, is merely a modification of the English 'goblin'; while *puca* is simply the English *Puck*—a name found as that of the glen of *Cwm Puca*, a part of the vale of the Clydach in Breconshire. *Ellyllon* are still thought to haunt groves and valleys, and *broyd ellyllon* ('demons' food') is the Welsh name for the poisonous toad-stool, just as *menyg ellyllon* ('demons' gloves') is a name for the foxglove. The term *ellylldan* ('demons' fire') is also used for 'the will-o'-the-wisp.' In the Lleyn district of Carnarvonshire a certain fiery apparition is said to take the form of 'a wheel within a wheel of fire.' The relation of fairies, sprites, and goblins with human beings are described in various folk-lore tales, for which the reader may consult the works of Sir John Rhys and Wirt Sikes (see Literature at end of art.).

Among the names used for certain of the supernatural beings here under consideration are *Bendith y Mamau*, 'the mothers' blessing'; *Gwagedd Annwn*, 'elfin dames'; *Plant Annwn*, 'elfin children'; *Plant Rhys Dafnyn*, 'the children of deep Rhys'; *Gwrach y Rhibyn*, a kind of Welsh banshee; *Cyhyraeth*, a kind of dreadful and doleful moan in the night, proceeding from an invisible source; *Tolaeth*, the imitation of some earthly

sound, such as sawing, singing, or the tramping of feet; *Cwm y Wybr* (also known as *Cwm Annwn*), dogs that haunt the air; *Aderyn y Corph*, a bird which appears as a foreteller of death; *Tolau*, a phantom funeral; *Y Fad Felen*, the yellow plague; and *Mallt y nos*, a night-fiend.¹ Among the forms which the Welsh imagination has assigned to spectres have been a fiery ball, a black calf, an ass, a dog, a round ball, a roaring flame, a bull, a goose, a mastiff, a gosling. One type of female demon is described as being 'a hideous creature with dishevelled hair, long black teeth, long, lank, withered arms, leathern wings, and a cadaverous appearance.' The appearance of this being was always regarded as an omen of death. In Welsh folk-lore, as in that of the Gaelic world, there are stories of water-monsters, more especially of the *afanc*, which is usually regarded in Wales as a kind of crocodile, but which was originally, in the opinion of Sir John Rhys, a kind of monster in human form, as is suggested by the Irish cognate *abhac*.

In Wales, as elsewhere where a belief in demons and spirits is found, certain effective barriers could, it was thought, be placed to their malevolence and capacity for mischief. One check to them was piety, others were the possession of a black-handled knife (iron being a source of great terror to fairies), the turning of one's coat inside out, the pronunciation of the Divine name, the crowing of a cock, change in one's place of residence, and—last but not least—a barrier of furze, through which, on account of its prickly nature, it was thought that fairies and similar beings could not penetrate. In Brittany substantially the same conceptions of demons and spirits prevailed as in Wales; but, while Welshmen have to a great extent abandoned the attitude of intellectual assent to the legends in question, the more conservative Breton, with his closer attachment to mediæval conditions, is still often haunted by them, and probably will be for a long time to come. In Wales, it is not impossible that, before very long, these ancient relics of primitive belief will be things of the past; but in the remoter parts of Ireland and Scotland they will probably linger on for many generations.

DEMONS AND SPIRITS (Chinese).—The two words *kuei shen* (variously translated 'demons and spirits,' or 'demons and gods'—the variation indicating a vexed question in the tr. of Chinese religious terms) together make up a binomial phrase such as does duty in Chinese for a general term, and may be taken as denoting all the inhabitants of the spiritual world, the various objects of religious worship and superstitious fear.

The spiritual world lies very near to the average Chinaman. Signs of his belief in its influence on his daily life are frequent; and it gives one at times a shock of surprise to find, as may happen in a casual conversation, that one's interlocutor—a well-read scholar or shrewd merchant—holds firmly by conceptions of it which are to oneself grotesque. Its nomenclature is fairly extensive, but not precise. Nor is it easy to describe the spiritual world in any very orderly or consistent fashion. Allowance must be made not only for differences in local superstitions, but also for the intermingling of diverse strains of thought in the more generally

¹ There is no trace in the Welsh literature or folk-lore of any belief that the dead bodies themselves rise from their graves and haunt the living.

¹ In Carnarvonshire one particularly malevolent type of demon is called *Y Bodach Glas*, 'the blue goblin.'

diffused religious conceptions. While it is possible that Chinese religion started from a pure monotheism, we have no record of any such time. In the most ancient books the worship of Shang-ti is accompanied by the worship of natural objects, of the spirits of ancestors, and of the worthies of former times. All these elements have been continued and developed.

In the popular religion of to-day, the worship of spirits immanent in, or in some vaguely conceived way connected with, natural objects, takes a much larger place than can possibly be taken by the worship of Shang-ti, confined as this is to the Emperor. The number of such spirits is, strictly speaking, indefinite. In virtue of the spiritual efficacy connected with it, anything—rock, tree, living creature—may become an object of worship. No extraordinary feature in the object is necessary to call forth this religious observance—a whole town has been known to go after a common viper found in a bundle of firewood. Among the commonest signs of the recognition of such spiritual powers bound up with natural objects are the votive tablets frequently seen suspended from the branches of trees, and the small pillars which are erected alongside graves and inscribed to the spirit of the soil, in acknowledgment of his property in the site of the grave. Some such acknowledgment is due to the local genius, on any interference with what is supposed to be under his control. It is a moot question whether the spirit of the soil is one only, identified with Hou-t'u, one of the ministers of Huang Ti (2698 B.C.), or whether there are not, rather, at least in the popular mind, many local genii.

Alongside of such spirits, and at the lower end of the scale of spirits hardly to be distinguished from them, are the supernatural beings called *hsien*, *yao*, *kuei*, *ching* ('fairies,' 'elves,' 'goblins,' 'sprites'), of various kinds, harmless, or, more usually, mischievous and malevolent. Every locality has its own traditions with regard to such beings. In Swatow the morning watch is not sounded because of a 'kelpie' (*yao-ching*) in the harbour, which on hearing the watch-drum was wont to carry off any early-stirring inhabitant. Of living creatures it is said that in the south of China the serpent, and in the north the fox, are those round which belief in supernatural powers has mostly gathered. In general it is said that birds and animals when they grow old become sprites (*ching*). The fox, for instance, increases in supernatural qualities with increase of years, and possesses different powers at fifty years of age or a hundred or a thousand. Even of trees it is said that by long absorption of the subtle essences of heaven and earth they become possessed of supernatural qualities.

Besides these supernatural beings, and wholly impersonal, are the maleficent influences called *sha*. They move, like physical forces, in straight lines, and can be warded off in various ways, as by earthenware figures of lions set on the roof of a house or in other positions of vantage, or by a stone or tile placed at a road-end and inscribed with the 'Eight Diagrams' (see COSMOGONY, etc. [Chin.]), or with words intimating that, as a stone from the Thai mountain, it will resist the evil influences.

According to Chinese etymology, the word *kuei*, 'demons,' is connected with a word of similar sound meaning 'to return,' and a *kuei* is accordingly defined as the spirit of a man which has returned from this visible world to the world invisible. 'Alive a man, dead a *kuei*' is a proverbial saying. In such use of the word *kuei* we must remember that nothing derogatory is implied, and that 'departed spirit' rather than 'demon' is the proper translation. There seems to be no possibility of making consistent with themselves the various popular Chinese views

of the spiritual nature of man and his state after death: to determine, e.g., the relation of the *kuei* to the three souls which each man possesses, according to Taoist teaching, or, according to another theory, to the twofold soul which dissolves at death into its component parts. In any case, existence in some fashion after death is assumed. Whether such existence is necessarily or in all cases immortal, it is not easy to determine. Taoism may teach an eternity of punishment; but, on the other hand, there is a word *chi*, which means the death of a *kuei*.

Kuei (*manes*) are to be honoured in the appropriate way; and, as otherwise evil may be expected from them, fear has a large place in present-day ancestral worship. Each family worships the *manes* of its own ancestors. *Manes* otherwise unprovided for are placated by public rites, particularly by 'the feast of desolate ghosts,' the '*kuei* feast,' on the 15th of the 7th moon. All *kuei* are more or less objects of dread; but in particular the *kuei* of a wronged person may be expected to seek revenge ('the wronged ghost impedes the murderer's steps'), and the *kuei* of evil men are evil *kuei*. According to one popular representation, the other world is for the Chinaman at least a replica of the Chinese Empire with similar social gradations, however, allotted otherwise than in this upper world; and mourning relatives may be comforted by a soothsayer's assurance that the meritorious deceased has been appointed by Yü Ti a mandarin of such and such a grade in the shadowy double of this or that Chinese city. Moreover, however difficult to work in consistently with other views, the doctrine of transmigration holds a large place in a Chinaman's theory of the relation between the unseen world and this.

While a *kuei* is, strictly speaking, a departed spirit, it is hardly to be supposed that all the innumerable *kuei* imagined to be active in this world or as retributive executioners in the infernal regions are of this origin. Perhaps what we might distinguish as ghosts and demons are alike called *kuei*. The Chinese generally are obsessed by the fear of *kuei*. These are supposed to abound everywhere, and to be specially active at night. Any untoward happening or uncanny sound—particularly any sound that is thin and shrill—is ascribed to them. Many houses are reported to be haunted by *kuei* because of misfortunes befalling their inmates. There are appropriate ceremonies for the placating of offended *kuei*, who in such cases are addressed euphemistically (e.g. *Shêng jên*, 'Sagely person'); and they can also be controlled by charms of Taoist origin.

The spiritual world is peopled from the human race not only by 'departed spirits' but by inhabitants of another grade called *hsien*. This name is applied not only to the fairy-like beings mentioned above, but also to those of mankind who 'by a process of physical or mental refinement' have raised themselves to the rank of immortals.

Finally, as in ancient times sages and worthies were worshipped as tutelary spirits (e.g. Hou-t'u), so has it been in later times. 'The gods (*shen*) of to-day are the men of ancient times' is a common proverb. Thus the Chinese pantheon has been filled with canonized worthies (such as Kuan Yü [A.D. 219], canonized as Kuan Ti, god of war; and the magician Chang, canonized as Yü Ti, who is practically the chief god of the Taoist religion); and not only with such, but also with an ever-increasing number of gods of all kinds and grades. 'The pope does not canonize on so large a scale as the Emperor of China' (Legge, *Rel. of China*, p. 184). These are the idols of China whose temples and images are everywhere to be seen.

While the multiplication of deities and the pervasive dread of demons are mainly connected with

the Taoist strain in Chinese religion, the influence of Buddhism has been potent in its development. 'The religion of Taoism was begotten by Buddhism out of the old Chinese superstitions' (Legge, *op. cit.* p. 201). Directly Buddhist elements are also of course present. *Shen, kuei, hsien, fo* ('gods,' 'demons,' 'genii,' 'Buddhas') are the four orders of beings superior to man; and, to instance from both the upper and the nether regions, Kuan Yin, the Goddess of Mercy, and Yen Wang, the King of Hades, are both of Buddhist extraction.

One extraordinary feature of the Chinese view of the spiritual world is the power believed to be exercised over its inhabitants by the Taoist priesthood, and specially by the Taoist pope, the spiritual successor (by the soul's transmigration) of Chang Tao-ling (A.D. 34). Demons and spirits unobtrusive to ordinary Taoist spells are subject to him; and from him protection against them may be purchased. In a case reported to the present writer, a merchant in Chao-Chow-foo, whose house was haunted by a spectre, went several days' journey to see the pope, and for \$200 purchased relief from the spectre's presence; for \$300 he might have had it recalled altogether from the world of men.

Mention should be made of demon possession, where the subject is possessed by a demon causing disease or madness, and of spirit-mediums inspired by an idol-spirit and who utter oracles in his name.

As an illustration of the incoherence of the whole spiritual system of the Chinese, it may be noted that, while the Emperor is the source of canonization, the exposition of the seventh maxim of the Sacred Edict not only brands Buddhism and Taoism as heretical, but pours scorn on their pretensions and superstitions, and casts doubt on the existence of Yü Ti himself.

DEMONS AND SPIRITS (Christian).—I. IN THE EARLY CHURCH TO COUNCIL OF CHALCEDON (A.D. 451).—It is stated by Origen (*de Princip., proem.*) that the Primitive Church did not lay down any definite doctrine with regard to the nature of the angels. The Church, however, he tells us, asserts their existence and defines the nature of their service as ministers of God for the purpose of promoting the salvation of men (*ib.*). Other early writers are not equally reticent. Some information concerning good and evil spirits may be gained even from the earliest Christian writers.

1. Apostolic Fathers.—(a) *Clement of Rome*, exhorting those to whom he writes to zeal and well-doing, points his readers to the example of the whole host of God's angels who stand by, ministering to His will (*Ep. i. ad Cor. xxxiv. 5*).—(b) In *Ignatius* we find the statement that the heavenly beings (*επουράνια*), including the *δόξα τῶν ἀγγέλων*, will receive judgment if they believe not in Christ (*Smyrn. 6*). There is a further reference in *Trall. 5*, where Ignatius claims to be able to understand the heavenly things, and the dispositions of the angels.¹—(c) In the *Letter of the Smyrnæans on the Martyrdom of Polycarp*, it is stated that the martyrs 'gazed with the eyes of their heart on the good things reserved for those that endure, but already shown to them by the Lord; for they were no longer men, but already angels' (*Mart. Polyc. ii.*). It is also said in the same chapter

¹ It should be noted that in the longer recension the latter passage is amplified in a manner consistent with the more developed doctrine of pseudo-Ignatius (*cf. Ap. Const. viii. 12*), while the former passage is omitted as possibly inconsistent with his doctrine.

that they were condemned to their torture that the devil might, if possible, bring them to a denial, for he had tried many wiles against them (*cf. also the Prayer of Polycarp, ib. xiv.*).—(d) Passing to *Hermas*, we find that, in answer to his inquiry as to the nature of the six young men who are building, he is informed that they are the holy angels of God who were created first, and to whom the Lord delivered all His creation, to increase and to build it and to be masters of all creation (*Vis. iii. 4*). The doctrine of guardian angels is also taught by *Hermas*. Each man has two angels, one of righteousness and one of wickedness. He deals with this question at some length, and states that good works are inspired by the angel of righteousness, evil works by the angel of wickedness (*Mand. vi. 2*).—(e) In a quotation from *Papias*, preserved by Andreas Cæsariensis (c. A.D. 520), we find an obscure reference to the work of the angels:

'To some of them (*δηλαδὴ τῶν πάλαι θεῶν ἀγγέλων*) He gave also to rule over the ordering of the earth, and He charged them (*παρηγγήσεν*) to rule well.' The words in the first brackets are, in Routh's opinion, the insertion of Andreas (*cf. Relig. Sacr.*, 1814-18, i. 14, and the notes, where a further passage is quoted from Cramer).

2. The Apologists.—We find a number of passages in the writings of Justin, Tatian, Athenagoras, and Irenæus bearing on the subject.

(a) *Justin*.—The most important of these is the well-known passage in *1 Apol. § 6*, where, in refuting the charge of atheism, Justin says:

'But both Him (*sc. the Father*) and the Son who came forth from Him and taught us these things, and the host of the other good angels, who follow and are made like unto Him, and the prophetic Spirit we worship and adore.'

The insertion of the angels among the Persons of the Trinity is unique, and is possibly to be explained by the fact that we frequently find 'angel' as a title of the Son (*Tixeront, Hist. des dogmes*, i. 243). With this passage should be compared the *Dial. c. Tryph. § 128*, in which the existence of angels is asserted and their relation to the Logos discussed. In *2 Apol. § 5*, Justin defines the functions of the angels, stating that 'God committed the care of men and all things under heaven to angels whom He set over these' (*ἐταξεν*). He then accounts for the existence of evil in the world as the result of the transgression of angels, who had 'transgressed the Divine appointment (*τάξις*), and by sinful intercourse with women produced offspring who are demons.' These demons 'subdued the human race to themselves' and 'sowed among men all manner of wickedness.' He proceeds to identify the demons who were the offspring of the fallen angels with the heathen gods. Justin is the earliest authority for the cultus of angels (*cf. the first passage quoted above, σεβόμεθα καὶ προσκυνούμεν*). To the passages already quoted may be added *Dial. c. Tryph. § 88*, in which the free will of the angels is asserted, and § 57, where it is said that, of the three men who appeared to Abraham, one was the Logos and the other two angels.

(b) *Tatian* denies the material nature of demons, asserting that their constitution (*σύμψηξις*) is spiritual, as that of fire or air. He also states that their nature is incapable of repentance (*Orat. 15, cf. 12, 20*). The ministry of angels in the government of the universe is also alluded to by the writer of the *Ep. to Diognetus*, vii.

(c) *Athenagoras* defines the office of the angels as being that of exercising the providence of God over things ordered and created by Him. God has the general providence of the whole; particular parts are assigned to angels (*Apol. 24*). In the same chapter he writes at some length of the fall of certain of the angels, and identifies the giants mentioned by the Greek poets with their illicit offspring. He speaks of one angel in particular (*Satan*) who is hostile to God, and discusses the difficulty of this belief. He states that Satan is

a created being like other angels, and is opposed to the good that is in God. In another passage he asserts that it is the demons who incite men to worship images, being eager for the blood of sacrifice, these images having no particular relation to the persons they represent (*ib.* 26; see further reference to the work of the angels at the end of ch. 10).

(d) The writings of *Irenæus* contain a large number of passages dealing with the angelology of the Gnostics, which he refutes. He is himself of opinion that the angels are incorporeal beings (*adv. Hær.* iii. 22), and, in opposition to the Gnostics, states that the Christian does (*facit*) nothing by their invocation (ii. 49. 3). He alludes to the fall of the angels, and refers to the domination of Satan and the deliverance of man from his power (iii. 8. 2; cf. also v. 21, § 3, and 24, §§ 3, 4).

3. Greek Fathers.—The doctrine of good and evil spirits was greatly developed by the Alexandrian writers *Clement* and *Origen*. In the writings of the latter, especially his commentaries on Scripture, numerous references are to be found to the functions of angels and demons. The notion of the guardian angel, already noted in *Hermas*, is here especially developed. He assigns to each nation its guardian spirit, basing this view upon his exegesis of Dt 32st, where he follows the text of the LXX (*ἐργαζεν ὁπία ἐθνῶν κατὰ ἀριθμὸν ἀγγέλων θεῶν*). But God reserved Israel to Himself for His own inheritance, appointing the angels as guardians of the nations. The power of these angels was broken by Christ at His coming, and hence they were moved to anger, and in turn stirred up persecution against the preachers of the gospel (*Orig. in Joh.* xiii. 49). *Origen* understands literally the 'angels of the churches' of the Apocalypse; he boldly (*audacter*) refers to the angels of churches as their invisible bishops ('per singulas ecclesias bini sunt episcopi, alius visibilis, alius invisibilis; ille visui carnis, hic sensui patens' [*hom.* xiii. in *Luc.*, ed. Lommatsch, v. 131]). Each individual has also his guardian angel, to whom is entrusted the soul of the believer when received into the Church by baptism. By him it is protected from the power of the devil; but, if it falls, it loses the protection of its guardian and comes under the power of an evil angel. The angels present the prayers of the faithful to God, rejoice at their progress, correct their failings, and intercede for them before the throne of God. He states, however, that they should not be worshipped or invoked (*c. Cels.* v. 5). *Clement* appears to have some doubt as to whether individuals possess guardian angels in the same sense as nations and cities possess them (*Strom.* vi. 17). But in other passages he lays stress on their work of intercession for men (cf. *Strom.* v. 14, vii. 12, and iv. 18, vii. 13). Under the influence of Neo-Platonic ideas, the Alexandrian Fathers assert that there is a double activity—a higher dealing with spiritual things, a lower with the material order; and that in both of these the angels of God are employed. *Origen* clearly expresses the view that the world has need of angels, who are placed over animals, plants, and elements (*hom.* xiv. 2 in *Num.*).

The following passages in *Origen* may also be consulted: *de Princip.* i. 5, 8, li. 8, *c. Cels.* iv. 29, v. 4, 6, 48, 68, viii. 81, 82, 84, *de Orat.* 6, 23, 81, in *Lerit.* *hom.* ix. 8, in *Num.* *hom.* xi. 4, xx. 3, in *Exek.* *hom.* xiii. 1, in *Ps.* xxxvii. *hom.* i. 1, in *Luc.* *hom.* xii. xxiii.

4. Later Greek writers.—There are a number of references in the Cappadocian Fathers to the nature and functions of angels. Concerning their nature there appears to have been some difference of opinion. (a) *Basil* held that their substance (*οὐρία*) was ethereal spirit or immaterial fire (*de Spir. Sanct.* § 38).—(b) *Gregory Nazianzen* is doubtful (*Orat.* xxxiv. 16).—(c) *Gregory of Nyssa*

declares them to be entirely spiritual (*in Orat. Dem.* *hom.* iv.).—(d) Many references are contained in the writings of *Chrysostom*. He asserts that their nature is superior to ours, but cannot be accurately comprehended by us (*de incomprehensibili Dei Natura*, v. 3). They are possessed of an incorporeal nature (*ἀσώματος φύσις*), and he rejects on this account the earlier interpretation of Gn 6² (*in Gen.* *hom.* xxii. 2). According to *Basil*, the sanctity of the angels is due to the activity of the Holy Spirit (*op. cit.* § 38). They are less liable to sin than we are (*δυσκλήτοια*), but not incapable of it (*ἀκλήτοια*). This is proved by the fall of Lucifer, whose sin was envy and pride. These Fathers assign guardian angels to individuals, churches, and nations. *Basil* is, however, of opinion that the guardian angel is driven away by sin 'as smoke drives away bees and a bad odour doves' (*hom.* in *Ps.* xxxiii. 5). *Gregory of Nyssa* is the only Greek Father who follows *Hermas* in the view that every man has both a good and a bad angel as his constant companion (*de Vita Moysis*). Angels are described as overseers (*ἐπόροι*) of churches. *Gregory Nazianzen* addresses a special farewell to these *ἐπόροι* on his departure (*Orat.* 32, *sub fin.*; cf. *Basil, Ep.* ii. 238). They are the guides (*παιδαγωγοί*) of the just, and lead them to eternal blessedness (*Bas. de Spir. Sanct.* xiii.; *Chrys. in Ep. ad Coloss.* *hom.* i. 3, 4). It would appear that *Cyril* of Jerusalem was of opinion that certain of the fallen angels had obtained their pardon (*Cat.* ii. 10; cf. also *Basil, in Ps.* xxxii. 4; *Gregor. Nyss. contra Eunom.* *hom.* x.; *Greg. Naz. Orat.* xxxiv. 81; *Joh. Chrys. in ascens. Dom.* 1, *de laud. S. Paul. Ap.* *hom.* ii. sermo 43, *in Gen.* *hom.* iv.).

5. Latin Fathers.—(a) We find in *Tertullian* a number of references to spirits, good and evil. Like *Origen*, he connects the ministry of angels with the sacrament of baptism. According to this writer, the baptismal water receives its healing properties from an angel (*de Bapt.* 4). Furthermore, the actual purification effected in baptism is due to a spirit who is described as 'angelus baptismi arbiters,' who prepares the way for the Holy Spirit ('non quod in aquis spiritum sanctum consequamur, sed in aqua emundati sub angelo, spiritui sancto praeparamur' (*ib.* 5, 6). Marriage which has received the blessing of the Church is announced by the angels and ratified by the Father (*ad Uxor.* ii. 9). The angels, looking down from heaven, record the sins of Christians; for example, when they are present in the theatre, where the devil is working against the Church (*de Spectac.* 27). A more detailed account of the work of the angels and demons will be found in *Apol.* 22, where they are stated to be spiritual substances. *Tertullian* alludes to the fall of the angels, corrupted of their own free will, from whom sprang the race of the demons. Of the former, Satan is the chief. They are the source of diseases and all disasters. They delude men into idolatry in order to obtain for themselves their proper food of fumes and blood. Both angels and demons are ubiquitous; both are also winged. These spiritual agencies are invisible and not to be perceived by the senses. On the question of the bodily forms of the angels, see *de carne Christi*, 6.—(b) The concern of the angels in human affairs is referred to by *Firmilian* in a letter to *Cyprian* (*Ep.* lxxv. *inter Cyprian.* 1; cf. *Euseb. HE* v. 28).—(c) The doctrine of *Lactantius* is peculiar. Before the creation of the world, God produced a spirit like to Himself (the Logos); then He made another being in whom the disposition of the Divine origin did not remain. This being, of his own will, was infected with evil, and acquired for himself another name. 'He is called by the Greeks *διδόλος*, but we call him *criminator*, because he reports to God the faults to which he

entices us' (cf. the Jewish appellation, *Satan*, שָׂטָן, 'the accuser'; Lactant. *Divin. Institut.* ii. 9).

At this point some MSS of Lactantius insert a passage which is regarded by the best authorities as spurious, and in which the origin of the devil and the ministry of angels are treated in a Manichean fashion. Here it is stated that, before the creation of the world, God made two spirits, themselves the sources of creation—the one, as it were, the right hand of God, the other, as it were, His left hand, and eternally opposed to each other. These two spirits are the *Logos* and *Satan*. The fall of the angels and the origin of the demons, who are divided into two classes, are described in il. 15, and in the same passage the latter are identified with pagan deities (cf. also *Epitome*, 28; *Instit.* iv. 8; and, on the devil, iii. 20, vii. 24–26).

(d) Later Latin Fathers, such as *Ambrose* and *Jerome*, were of opinion that the angels were created before the material world (cf. *Ambrose, de Incarnat. Dom. Sacr.* 16; *Jerome, in Ep. ad Tit.* 1²). Some difference of opinion exists among them about the interpretation of Gn 6², *Jerome* appearing to regard the spirits as possessed of bodies (cf. *in Ezec.* 28¹⁰); *Ambrose*, on the other hand, agrees with *Hilary* in the statement that they are 'spirituales et incorporeales' (cf. *Ambros. in Luc.* vii. 126; *Hilar. in Ps.* cxxxvii.). The sin of *Satan*, according to *Jerome* and *Ambrose*, was pride (cf. *Ambros. de Virgin.* i. 53, *in Ps.* 118, serm. 4. 8, 7. 8, 16. 15). The views of the Latin Fathers with regard to guardian angels are similar to those which we have already encountered in the writings of the Greek Fathers. Numerous references to this subject will be found in their commentaries and homilies, where it is stated of nations, churches, and communities that each possesses its guardian angel.

See esp. *Jerome* in his com. on Ec. 5², where he says that 'the things which are said pass not into the wind, but are straightway carried to the Lord, a praesenti angelo qui unicuique adhaeret comes.' Other references will be found in *Jerome, in Dan.* 7³, *Mic.* 6^{1,2}, the last-named passage being of special interest. See also *Ambros. in Ps.* 118, serm. 8. 6, and *Hilary, in Ps.* lxx. 13, cxxxii. 6, cxxxiv. 17.

Jerome is among the earliest of Latin writers to call attention to the diversity in the orders of spirits, comparing the angelic hierarchy with the organization of the officials of the Empire (cf. esp. *adv. Iovin.* ii. 28, *adv. Ruf.* i. 23). *Ambrose* has a passage which bears upon the cultus of the angels, whom he appears to place on a level with the martyrs, and whose invocation he warmly recommends (*de Viduis*, ix. § 55).—(e) Already in *Eusebius* a distinction is found between the worship (σεβαστες) due to God alone and the honour (τιμῶνες) paid to the angels (*Præp. Ev.* vii. 15; cf. also *Dem. Ev.* iii. 3, *Præp. Ev.* xiii. 13).—(f) Finally, for this period the writings of *Augustine* may be consulted, especially the *de Civ. Dei*, in which the angels play no small part. They form the heavenly City of God, and this part of the Holy City assists that other part here below: 'hanc [sc. Civitatem Dei] angeli sancti annuntiaverunt qui nos ad eius societatem invitaverunt civesque suos in illa esse voluerunt' (x. 25). The angels minister alike to Christ, the Divine Head of the mystical Body, who is in heaven, and to the members of the Body who are on earth. Thus it is in the Church that the angels ascend and descend according to the words of Scripture.

'This is what happens in the Church: the angels of God ascend and descend upon the Son of Man, because the Son of Man to whom they ascend in heart is above, namely the Head, and below is the Son of Man, namely the Body. His members are here; the Head is above. They ascend to the Head, they descend to the members' (*Enarr. in Ps.* xlv. 20).

Augustine states that the angels are spirits of an incorporeal substance, 'invisibilis, sensibilis, rationalis, intellectualis, immortalis' (cf. *ps.-August. de Cognit. veræ vitæ*, 6). The designation 'angel' refers to the office, not to the nature, of these spirits (*Enarr. in Ps.* ciii. serm. 1. § 15). Angels received at their creation, from the Holy Spirit, the gift of grace, and it is possible that, in the case of those who did not fall, they received also the assurance of perseverance (*de Civ. Dei*, xii. 9. 2, xi. 13). *Augustine* refuses to identify the 'sons of

God' (Gn 6) with the angels (*ib.* xv. 23). The sin of the fallen angels was pride. The fall of *Satan* occurred at the very beginning of his existence, and the good angels have enjoyed the vision of the Word from the first moment of their creation (*de Gen. ad Lit.* ii. 17, xi. 21, 26, 30). The office of the evil angels is to deceive men and to bring them to perdition (*in Ioan. tract.* ex. 7). They occupy themselves with the practice of divination and magic (c. *Academ.* i. 19, 20). But the power of these evil spirits is limited; God employs them for the chastisement of the wicked, for the punishment of the good for their faults, or even for the purpose of testing men (*de Trin.* iii. 21, *de Civ. Dei*, xi. 23. 2). *Augustine* asserts that the good angels announce to us the will of God, offer to Him our prayers, watch over us, love us, and help us (*de Civ. Dei*, vii. 30, x. 25; *Ep.* cxl. 69). They are even entrusted with the care of unbelieving nations (*Enarr. in Ps.* lxxxviii., serm. i. 3). He also, like *Origen*, affirms that to them is committed the charge of the material world, 'iubente illo cui subiecta sunt omnia' (*de Gen. ad Lit.* viii. 45 ff.). It should, however, be noted that *Augustine* does not assign a guardian angel to each individual.

It has been suggested that this is due 'to his doctrine of predestination, which precludes the constant ministration of a particular guardian angel, though it leaves room for the ministry of angels as mediators between God and the faithful' (*Turmel*, quoted by *Kirsch, Communion of Saints in the Ancient Church*, Eng. tr., p. 246 f.). It may be mentioned in support of this view, that *Cassian*, the great opponent of the doctrine of predestination, following *Hermas*, attributes the choice between the good and evil angelic counsellors to man's free will (*Cassian, Collat.* viii. 17; cf. also viii. 12, 18).

Augustine does not favour any cultus of the angels: 'honoramus eos caritate non servitute' (*de Vera Relig.* lv. [110]). They do not desire our worship, but rather that with them we should worship their God and ours (*de Civ. Dei*, x. 25). With regard to the order of the angelic hierarchy and the signification of the titles attributed to the angels, *Augustine* declares himself to be entirely ignorant, and appears to discourage speculation on this subject (*Enchir.* 15; *ad Orosium*, 14). (See *Tixeront, Hist. des dogmes*, ii. 372–376; *Kirsch, op. cit.* pt. iii. ch. 5.)

Conclusion.—The evidence of the passages cited above may be summarized as follows. The earliest Fathers of the Church, acquainted with the angelology and demonology of Scripture and of Jewish apocalyptic literature, all affirm or imply the existence of spirits good and evil. At a very early period, as we can see from the writings of *Hermas*, the doctrine of good and evil angels appointed to watch over individuals and institutions had already been adopted, and we may trace a steady development of this doctrine in the writings of both the Greek and the Latin Fathers, while it is probable that later speculations on this subject were greatly influenced by the writings of *Origen*. Opposition to Gnostic speculation led earlier writers to insist on the fact that angels and demons were created beings, while some writers refuse to allow to the former any part in the work of creation. Difference of opinion seems to have existed as to the nature and constitution of angels and demons, though the majority of writers appear to have regarded them as incorporeal spirits. A further difference is seen in the exegesis of Gn 6^{1,2}. The earlier writers more usually identify the 'sons of God' with angels; later writers frequently reject this interpretation. The legend of the fall of the angels, and the person of *Satan* especially, led later writers to indulge in speculation as to the problem of evil and the relation of evil spirits to God. It would appear that the majority at least of later writers held the view that angels were capable of sinning, being possessed, like men, of free will. There are some traces of the beginnings

of a cultus of the angels which, according to some authorities, may be traced back as far as Justin Martyr, and which appears to be clearly taught in the writings of Ambrose. It is probable, as may be gathered from Irenæus, that the dangers of the cultus became apparent during the Church's struggles with Gnosticism. During this period we find very little about orders or numbers of angels. This subject, as well as the dedication of a church by Constantine to the archangel Michael, will be best discussed in the next section.

II. FROM THE COUNCIL OF CHALCEDON TO A.D. 800.—During this period we have especially to observe two points: (1) the development of the cultus and invocation of the angels, and (2) the elaborated and systematic doctrine regarding the orders of spirits.

1. Cultus of angels.—We have already noted a passage in the writings of Justin Martyr which possibly implies a cultus of the angels, and another in Ambrose where their invocation is directly recommended. On the other hand, Irenæus appears definitely to oppose both invocation and worship, and a writer so late as Augustine explicitly teaches that they should find no part in Christian worship. The statements of Origen have led some authorities to regard him as favourable, though there are passages in his writings where the cultus is explicitly condemned. To the authorities cited we may add canon 35 of the 4th cent. Council of Laodicea, in which Christians are forbidden 'to forsake the Church of God, and go away and name (*ὀνομάζειν*) angels, and to form assemblies, which is unlawful' (Hefele, *Hist. Council.*, Eng. tr. ii. 317). But the passage is of doubtful meaning, and it should be observed that Dionysius Exiguus renders *ἀγγέλους* by *angulos*. The canon goes on: *ἐἴ τις οὖν εὐρεθῇ ταύτῃ τῇ κεκρυμμένῃ εἰδωλολατρείᾳ σχολάζων, ἔστω ἀνάθεμα*. This canon was known to Theodoret, who refers to it twice (*Ep. ad Col.* 2¹⁶ 317). In the former of these passages he states that this disease (*πάθος*) is still to be found in Phrygia and Pisidia.

This view is supported by certain inscriptions discovered in that neighbourhood, among which may be included the following: 'Ἀρχάγγελε Μιχαὴλ ἐλέησον τὴν πόλιν σου καὶ τὴν αὐτὴν ἀπὸ τοῦ πονηροῦ' †: 'Archangel Michael, have mercy on thy city and deliver it from evil' (for these inscriptions, see Dom Leclercq's art. in *DACL*, s.v. 'Anges,' col. 2085).

In the latter passage, Theodoret again quotes the canon of Laodicea, as forbidding prayer (*εὐχεσθαι*) to angels. One other passage in this writer may be referred to, viz. *Græc. Affect. Cur.* 3, where, in answer to the pagan objection that Christians also worship other spiritual beings besides God, he answers that Christians do indeed believe in invisible powers, but do not render to them worship (*σέβας, προσκύνησις*). He states that these beings are incorporeal and, unlike the pagan deities, sexless, and that they are employed in worshipping God and furthering the salvation of man. The evidence of Theodoret with regard to the cultus of angels and churches dedicated to them is supported by Didymus (*de Trin.* ii. 7-8), who says that churches are to be found in both towns and villages, under the patronage of angels, and that men are willing to make long pilgrimages to gain their intercessions. The earliest historic reference to the dedication of a church to an angel is to be found in Sozomen (*HE* ii. 3), where it is stated that Constantine erected a church, called the *Μιχαήλιον*, not far from Constantinople. The reason of the dedication was that the archangel Michael was believed to have appeared there. In the West we find instances of the dedication of churches to the archangel Michael at least as early as the 5th cent. (see *DACL*, vol. i. col. 2147). St. Michael is the only angel of whom we find a commemoration in the calendar before the 9th century. Various festivals of this angel are to be found in different

calendars, but they appear in all cases to be the anniversaries of dedications of churches. This was the case with the festival of the 29th of September, still observed in the West, which commemorated a church, long since destroyed, in the suburbs of Rome on the Via Salaria (Duchesne, *Christian Worship*, 276). Five masses for this festival (then kept on the 30th, not the 29th) are found in the earliest Roman service-book, the Leonine Sacramentary (ed. Feltoe, pp. 106-108). In the prayers contained herein are found clear references to the invocation and cult (*veneratio*) of angels.

In the Second Council of Nicæa (A.D. 787), which dealt with the iconoclastic controversy, the question of the nature of the angels was discussed. At this Council a book, written by John, bishop of Thessalonica, was read, in which the opinion was advanced that angels were not altogether incorporeal and invisible, but endowed with a thin and ethereal or fiery body. In support of this view John quotes Basil, Athanasius, and other Greek Fathers. He expresses the same view with regard to demons, and states that Christians both depict and venerate angels. These views appear to have met, on the whole, with the approval of the Council, which sanctioned the custom of depicting angels and venerating their images (Conc. Nic. ii. act. v.). By the action of this Council it would appear that the cultus of the angels, which had originated before the beginning of the period under consideration as a private devotion, and had met with considerable opposition from various ecclesiastical writers, formally received the sanction of the Church, and may henceforward be regarded as part of the *doctrina publica*.

2. Orders of spirits.—We must now turn to the consideration of the angelic hierarchy. We have seen, in the earlier period, that occasional references were made to this subject by some Fathers, but that a writer so late as Augustine had not only declared his ignorance of the subject, but had apparently discouraged speculation thereon.—(a) The first writer who definitely elaborated the subject was *pseudo-Dionysius* (c. A.D. 500), and his detailed classification and description of the spiritual hierarchy may probably be regarded as the basis of all subsequent speculation both in the East and in the West. The outline of his scheme is as follows. He divides the celestial hierarchy into three orders (*τάγματα*), and further subdivides each of these into three. Thus the first order comprises: (1) *ὁρόνιοι*, (2) *χερουβίμ*, (3) *σεραφίμ*; the second: (4) *κυριότῃτες*, (5) *ἐξουσίαι*, (6) *δυνάμεις*; and the third: (7) *ἀρχαί*, (8) *ἀρχάγγελοι*, (9) *ἄγγελοι*. It is impossible here to enter into any detailed description of the theory of the Areopagite concerning the functions of the angelic hierarchy. It may suffice to state that it is a hierarchy of illumination, the highest rank being nearest to God, the lowest nearest to man. Cf. esp. *de Cælest. Hier.* 10, § 2: 'Now all angels are interpreters of those above them . . . the most reverend, indeed, of God who moves them, and the rest in due degree of those who are moved by God.' It would appear that the members of each triad are on an equality with each other, being distributed into a first, middle, and last power. In this manner Is 6³ is interpreted, where it is stated that the seraphim cry one to another, 'indicating distinctly, as I think, by this, that the first impart their knowledge of divine things to the second' (*ib.*).

(b) In the West the classification of the Areopagite is closely followed by *Gregory the Great*, who affirms the existence of nine orders of angels, viz. Angeli, Archangeli, Virtutes, Potestates, Principatus, Dominationes, Throni, Cherubim, Seraphim (*in Evang. lib. ii. hom. xxxiv.*). In the same work a number of other passages occur dealing with the ministry of angels, the explanation of

the names and the offices of the different orders of angels, and the manner in which we may profit by the imitation of the angels, together with certain other points of lesser interest. References to evil spirits will be found in the same author (cf. *Moral. iii. passim*).

(c) Finally, *John of Damascus*, who in his writings so frequently shows traces of the teaching of the Areopagite, follows the latter in his classification of the celestial hierarchy (*de Fid. Orth.* ii. 3). In the same passage he gives a description of the angels, in which he defines a number of points which, as we have seen, had been matters of controversy, both before and during the period under discussion. The definition is as follows:

'An angel, then, is an intellectual substance, always mobile, endowed with free will, incorporeal, serving God, having received, according to grace, immortality in its nature, the form and character of whose substance God alone, who created it, knows.'

It may be said that at the close of this period something like a general agreement had been reached about the nature and functions of spirits, good and evil, and it remains only to discuss some further elaborations which we encounter in the mediæval period.

III. FROM A.D. 800 TO THE REFORMATION.—During the mediæval period, speculations concerning the nature of good and evil spirits are constantly to be found in the writings of the schoolmen. These, for the most part, consisted in the application of mediæval dialectic to the statements of Scripture, the opinions of Augustine, and the schematization of the Areopagite, whose works had been translated by John Scotus Erigena, and obtained great popularity throughout the West (*Bardenheuer, Patrology*, Eng. tr. 1908, p. 538). It is impossible here to enter into details about the nature of these speculations, and it seems most convenient to illustrate their general trend from the writings of certain representative theologians. In spite of the diversity of opinion, it should be observed that the first canon of the Fourth Lateran Council (A.D. 1215) made certain clear and definite statements with regard to spiritual beings, and their relation to God, without apparently, however, terminating the disputes of later theologians on this matter. It is stated that

'God is the Creator of all things, visible and invisible, spiritual and corporeal, who of His own omnipotent power *simul ab initio temporis* ulramque *de nihilo condidit creaturam, spirituales et corporealem, angelicam videlicet et mundanam, ac deinde humanam quasi communem ex spiritu et corpore constitutam*. The devil and other demons were created, indeed, good by God, and became bad of their own accord (*per se*). Man sinned by suggestion of the devil.'

As we have said, this decree appears to have failed to produce unanimity of opinion among the schoolmen, and the subject remained, as Harnack remarks, 'the fencing and wrestling ground of the theologians, who had here more freedom than elsewhere' (*Hist. of Dogma*, Eng. tr., vi. 186). But on many points we discern a general agreement. Thus, with regard to guardian angels, all held that each man from his birth possessed a guardian spirit, and that this applied also to sinners, while some asserted this even of Antichrist himself. Evil spirits, on the other hand, tempt and incite men to sin, though it should be observed that even the power of the devil was held to be subject to the limitation that he cannot affect the free will or spiritual knowledge of man, but can approach him only through his lower nature (so Albertus Magnus, *Summæ Theol.* pt. ii. tract. 6; see also Bonaventura, in *Sent.* 2, dist. 11, quæst. 1, and Alb. Mag. *ib.* tract. 9). But the question of the substance, essence, endowments of grace, peccability, modes of cognition, and individuation of the angels, as well as certain other problems, still remained in dispute.

(a) *Peter Lombard* († 1164), the first systematic

theologian of the West, devotes ten sections of the second book of the *Sententiæ* (dist. ii.-xi.) to the subject of good and evil spirits. In his teaching he follows the Areopagite, and deals, among other things, with the questions of the nature, creation, free will, fall, and peccability of angels, and the relation of demons to magical arts; he also discusses the question whether Michael, Raphael, and Gabriel are the names of orders or of individual spirits, and whether each man has a good and bad angel assigned to him; and concludes with a discussion as to the possibility of progress of the angels in virtue.

(b) In the numerous references to good and evil spirits contained in the writings of *Bernard*, two passages are especially worthy of notice. The first is contained in the *de Consideratione* (v. 4), where the angels are described as

'cives [Jerusalem matris nostræ] . . . distinctos in personas, dispositos in dignitates, ab initio stantes in ordine suo, perfectos in genere suo, corpore ætherios, immortalitate perpetuos, impassibiles, non creatos sed factos, id est gratia non natura, mente puros, affectu benignos religione pios, castimonia integros unanimitate individuos, pace securos, a Deo conditos, divinis laudibus et obsequiis deditos, hæc omnia legendo comperimus, fide tenemus.'

In the long passage which follows we find a disquisition on the angelic hierarchy, which closely follows that of the Areopagite. In the second passage (serm. v. in *Cant.* § 7), Bernard enumerates some points which he feels unable to resolve:

'The Fathers appear to have held various opinions on such matters, nor is it clear to me on what ground I should teach either opinion, and I admit my ignorance; neither do I consider a knowledge of these things to conduce to your progress.'

The points in dispute refer to the nature of the bodies of the angels: it is asked whether their bodies are part of themselves, as is the case with men, or assumed for purposes of revelation. On guardian angels, see in *Ps.* 'qui habitat,' serm. xii. 2; serm. vii. in *Cant.* § 4; on the devil and evil angels, see in *Ps.* 'qui habitat,' serm. xiii.; *de Gratia et Libero Arbitrio*, cap. vi. § 18.

(c) *Anselm*, who may justly be regarded as the pioneer of speculative theology in the Middle Ages, is probably the first Western writer to apply with any fullness the processes of the Aristotelian dialectic to the traditional teaching of the Church about good and evil spirits. These play a somewhat important part in his remarkable system, especially in the elaborate arguments of the *Cur Deus Homo*, where it is suggested that man was created for the purpose of completing the number of the angels, which had been diminished by the fall of the devil and his companions. This opinion Anselm rejects, saying that the human race is made for itself and not merely to replace individuals of another nature (*Cur Deus Homo*, i. 18). In the long discussion which follows concerning the number of the angels, and whether the number of the elect will exactly correspond with the number of those that fell, Anselm admits a diversity of opinion, and concludes that it is permissible to hold any view that is not disproved by Scripture. Cf. also *de Casu Diaboli*, cap. 4, where the cause and manner of the Fall are discussed. On the angels, cf. *de Fide Trin.* 3.

(d) In order to present a clearer view of the Scholastic doctrine of good and evil spirits, it will be best to give here a brief summary of the teaching of *Thomas Aquinas* on this subject, where we probably find it in its most developed form. This is contained in the 'Tractatus de Angelis' which is comprised in Quæstiones I. to lxiv. of *Pars prima* of the *Summa* :—

Angels are altogether incorporeal, not composed of matter and form; exceed corporeal beings in number just as they exceed them in perfection; differ in species since they differ in rank; and are incorruptible because they are immaterial. Angels can assume an aerial body but do not exercise

the functions of life. Thus they do not eat *proprie*, as Christ did after His resurrection. Angels can be localized, but cannot be in more than one place at the same time. The substance of angels is not pure thought, because, in a created being, activity and substance are never identical. Similarly the *esse* of angels is not pure thought. They have no sensory cognition. Their cognition is objective—not, however, through determinations in the object, but through innate categories. The cognition of the higher angels is effected by simpler and fewer categories than is that of the lower. Angels by their natural powers have knowledge of God far greater than men can have, but imperfect in itself. They have a limited knowledge of future events. The angels are possessed of will, which differs from the intellect in that, while they have knowledge of good and evil, their will is only in the direction of the good. Their will is free, and they are devoid of passion. The angels are not co-eternal with God, but were created by Him *ex nihilo* at a point in time (this is strictly *de fide*); their creation was not prior to that of the material world (the contrary opinion is here permitted). The angels were created in a state of natural, not supernatural, beatitude. Although they could love God as their Creator, they were incapable of the beatific vision except by Divine grace. They are capable of acquiring merit, whereby perfect beatitude is attained; subsequently to its attainment they are incapable of sin. Their beatitude being perfected, they are incapable of progress.

Concerning evil spirits, Aquinas' teaching is briefly as follows. Their sin is only pride and envy. The devil desired to be as God. No demons are naturally evil, but all fell by the exercise of their free will. The fall of the devil was not simultaneous with his creation, otherwise God would be the cause of evil. Hence there was some kind of interval between the creation and the fall of the demons. The devil was originally the greatest of all the angels; his sin was the cause of that of the other fallen angels, by incitement but not by compulsion. The number of the fallen angels is smaller than that of those who have persevered. The minds of demons are obscured by the deprivation of the knowledge of ultimate truth; they possess, however, natural knowledge. Just as the good angels, after their beatification, are determined in their goodness, so the will of the evil angels is fixed in the direction of evil. The demons suffer pain, which, however, is not of a sensory character. They have a double abode—hell, where they torture the damned, and the air, where they incite men to evil.

(e) The foregoing will give some idea of the teaching of the scholastics on the nature of spirits in its developed form. Many other questions were raised which it is impossible to discuss here; but one further instance may be given, viz. the speculation as to the manner in which angels hold communication with each other. This matter is treated by *Albertus Magnus* and *Alexander of Hales*. This communication is effected immediately, and the speech of the angels is described by *Albertus Magnus* as 'innuitio,' by *Alexander of Hales* as 'nutus' (cf. *Alb. Magn. Sum. Theol.* 2, tr. 9, quest. 35, m. 2; *Alex. Hal. Summa*, pt. ii. quest. 27, m. 6).

(f) Finally, we may quote one 14th century authority, namely, *Tauler* († 1361), who, though, like his contemporaries, he follows the Dionysian classification of spirits, yet expresses himself with much reserve about the nature and character of angels. The following passage is contained in his sermon on Michaelmas Day:

'With what words we may and ought to speak of these pure spirits I do not know, for they have neither hands nor feet,

neither shape nor form nor matter; and what shall we say of a being which has none of these things, and which cannot be apprehended by our senses? What they are is unknown to us, nor should this surprise us, for we do not know ourselves, viz. our spirit, by which we are made men, and from which we receive all the good we possess. How then could we know this exceeding great spirit, whose dignity far surpasses all the dignity which the world can possess? Therefore we speak of the works which they perform towards us, but not of their nature.'

With regard to the development of the cultus of the angels during this period, the following observations may suffice. Dedication of churches to angels and especially to St. Michael became far more common, both in the East and in the West. With regard to festivals of angels we find special offices in the mediæval breviaries by which the unofficial cultus of the angels obtained formal recognition. The names of individual angels are encountered in many litanies, and, finally, the cultus of the guardian angels received official sanction when a feast in their honour was instituted (October 2nd) after the Reformation. No doubt the introduction into the formal liturgy of the Church lingered behind the practice of popular devotion, in this as in other matters.

In conclusion, we may remark that, at the Reformation, Protestant theologians retained their belief in good and evil spirits; even maintaining that the former intercede for mankind, but forbidding any invocation. This belief, based on Scripture, underwent considerable modification in the 18th cent., which witnessed many and various attempts at rationalization in different directions. The beginning of the 19th cent. was marked by a revival among Protestants of the belief in angels expressed 'in a philosophic and idealizing sense' (*Hagenbach, Hist. of Doctrines*, iii. 193, 334 f.). It may be said that among modern writers of this school the whole subject has ceased to excite any interest either speculative or practical. In the Roman Church we cannot detect any change in belief or practice concerning the existence of good and evil spirits, though we may point to certain indications of a tendency to discount the subtleties of mediæval speculation on the subject (*Liebermann, Instit. Theol.* lib. iii. cap. 2, art. 1, in vol. iii. p. 280). In the Anglican Church the belief in angels has the fullest liturgical recognition, though the subject is hardly dealt with in her formularies. The invocation of angels was defended by some of the Caroline divines: the practice of dedicating churches to angels has remained unbroken. In the Book of Common Prayer the 29th of Sept., still known in the Roman calendar as the 'Dedicatio Sancti Michaelis Archangeli,' has become the feast of St. Michael and All Angels.

The comparative lack of interest felt in the whole question of the existence and nature of good and evil spirits may be explained by reference to the fact that, while belief in the existence of such spirits is generally accepted by Catholic theologians, there is still to be found a strong reaction from the excessive speculation of scholasticism.

DEMONS AND SPIRITS (Coptic).—The beliefs of the Coptic Christians on the subject of demons and spirits were derived from those of their pagan predecessors in the Græco-Roman period (see 'Egyptian' art. below), and show interesting traces of Gnostic influence. In spells to ward off the attacks of devils the designations of the æons are given, and the mysterious magical names of the spirits are recited, confused in true Gnostic fashion with the Hebrew appellations of the Deity. Here is a typical invocation:

'Pantokrator Iaō Sabaoth Mōneous Soneous Arkōeous (?) Adonai Iaō Elōi, who is in the Seventh Heaven and judgeth the evil and the good: I conjure thee to-day, thou that providest for me the twenty thousand demons which stand at the river Euphrates, beseeching the Father twelve times, hour by hour, that He give rest unto all the dead.'

Here we have the Gnostic spirit Iaō confused (naturally enough) with the Deity (Jahweh), but he is not the Deity who is appealed to later on as 'the Father.' However, Iaō Sabaoth in Coptic spells is hardly to be distinguished from the Deity. Good spirits are invoked as

'ye who are upon the northern and eastern sides of Antioch. There is a myrtle-tree, whose name is the Achelousian (sic) lake which floweth from beneath the throne of Iaō Sabaoth.'

This is a very curious confusion of classical Hades-allusions with the Gnostic-Christian throne of Iaō-Jahweh. For the rest, it is the usual gibberish of the medicine-man. The names of the Deity and those of the angels are often confused: Emmanouel appears as the name of an angel, with Tremouel and Abraxiel; the last has a very Gnostic sound.

Chief among the good spirits were, of course, the archangels—sometimes four, sometimes seven: 'those who are within the veil' (κατακρυφα). Each man had a guardian angel, who specially protected him against evil. With the angels are invoked also the cherubim and seraphim, and the four-and-twenty elders, and even the four beasts that uphold the throne of the Father. These were all conceived as objective spiritual beings, to be invoked in prayer against evil. The names or descriptions of the spirits had to be known, or they could not be invoked: some appear named after the letters of the alphabet, others are merely 'those who come up with the great stars that light the earth.' This is a very old Egyptian touch, and reminds us of the ancient dead who were thought to walk among the stars, the *akhemu-sek*.

Among the evil spirits we find, of course, Satan, whose name in one case is Zēt—an interesting survival of the name of the old Egyptian Typhonic god Set. Fate (Μοῖρα) seems to occur as an evil demon. Disease was thought to be largely due to the attacks of devils, and especially so in the case of epilepsy. It has been conjectured, with probability, by Crum (*Catalogue of the Coptic MSS in the British Museum*, 1905, p. 253, n. 9) that the name ἐπιληψία has been corrupted into the name of a female demon, Aberselia, Berselia, or Berzelia, who appears in an Ethiopic transcription as Werzelyā. Berselia was apparently regarded as a flying vampire, and classed in Coptic vocabularies as a kind of bird. A demon of the mid-day heat appears in the Ethiopic versions of the 'Prayer of S. Sisinnius,' with the 'Werzelyā' mentioned above (references in Crum, *loc. cit.*).

Magical charms (φυλακτήρια) against the attack of demons were common enough. They were usually written on slips of parchment and enclosed in a little leather box, generally tied to the arm or, no doubt, hung about the body just as the modern charm of the Egyptian *fellāh* is worn. The contents are usually vague invocations, as has been seen. One of the finest is the MS Or. 5987 of the British Museum (published by Crum,

op. cit. 1008), from which excerpts have been given above. Cf. art. CHARMS AND AMULETS (Abyssinian).

The usual Coptic word for a demon or spirit, good or evil, is *ih*, which is the Old Egypt. for a good spirit. The term *hik*, for an evil spirit, which is the same as Old Egypt. *hekau*, 'magic' or 'enchantment,' occurs occasionally. The appellation *refsaar*, 'sunderer,' 'divider,' is a tr. of the Gr. διὰβολος, which is itself often used in Coptic. For 'angel' the Gr. ἄγγελος is used.

LITERATURE.—In addition to that cited in the text, see list of authorities appended to art. CHARMS AND AMULETS (Abyssinian).

H. R. HALL.

DEMONS AND SPIRITS (Egyptian).—I. Scope of the article.—The delimitation of an investigation on the subject of demons and spirits presents no little difficulty in religions which are of so distinctly animistic a character as those of Egypt. In the first place, we cannot divide the subject and study angelology and demonology separately, because spirits are never good or bad by constitution or in their origin; this aspect is of relatively secondary formation or date (see DUALISM [Egypt.]). In the second place, the various kinds of demons or spirits of the dead, although in very many cases their characteristics, powers, attributes, and dwelling-places are identical with those of the other spirits, really belong to a different category from the latter (see below, § 9; and cf. art. STATE OF THE DEAD [Egypt.]). Lastly, with such a vast array of demons, properly so-called, as we have in Egypt, a short account like the present can give only the general characteristics, while, as to particular personifications, it can mention only the principal ones whose active and definite rôle is witnessed to by texts or representations. In a world in which all beings and objects possess a 'demon' or 'demons,' we must confine our attention to those which are of special importance in the life of the gods or of men.

2. Pre-historic demons and spirits.—Our information on the earliest period is preserved in the earliest texts (numerous chapters of the Book of the Dead), some of them going back even to pre-historic times (as the funerary chapters of the proto-Theban coffins, certain parts of the celebrated ritual of 'the opening of the mouth,' and especially the Pyramid Texts). The chief demons and spirits in these are called sometimes *biu*, sometimes *khui* (see below). The meaning of the special terms by which they are designated is very difficult to state accurately. Of the significance of such terms as *afau*, *utennu*, and *ashmu*, we must admit that as yet we have no precise knowledge. The passing allusions in a very few texts seem to indicate that they were conceived under the form of 'devouring spirits,' troops of monkeys, lizards, and hawks. These are, in any case, survivals of the most ancient periods. The same is true of the jackal-demons (Pyramid of Pepy II., line 849). The higher and lower 'Beings of Sit' lead us to suppose a classification of spirits into heavenly and earthly. The *rokhitu* are, according to the texts, both spirits full of wisdom and personifications of the powers opposed to (and vanquished by) Egypt or the gods of Egypt. There is much discussion as to the best translation of this word. The present writer thinks that the French word *malin*, 'mischievous,' might be taken as an exact equivalent of the Egyptian term with its double meaning. The *urshu* play a somewhat more definite part of 'watchers.' They are bands of demons who watch, lie in wait for, keep their eyes upon. This function has followed naturally from the ordinary evolution of meaning: from having simply designated an individual characteristic, neither good nor bad,

it has become a protective function of a specially designated group of men or a locality, heavenly or earthly. The *Immortals* are often mentioned; they even figure in a number of representations that have not yet been included—*as the present writer suggests*. It is indeed figures of these spirits that are carved on several parts of the solar barques (*Atetmehes*, *Atetmehes* of the solar barque, supports the three or four of visibility, represented in a number of temple barques and in frescoes of Theban tombs. They have hardly ever been noticed, except by Budge (*Gods of the Egyptians*, i. 154), who quotes without approving the view that they are the great flock of souls of future generations. This view does not seem sufficiently borne out by the same. The *Immortals* of the primitive gods seem rather to have been symbols of spirits of a benevolent character, in the sense that they watched over the safety of the sun, at the time when the religious world consisted of immortal bodies of spirits and an immortal sky-god with no precise functions, but when the religious heavenly bodies (even the most important ones, like the sun) were entrusted to the care of spirits who directed their movements, defended them against their enemies, etc. In the Hittite period, the power and divinity of the gods proper were obtained from the union of spirits, and left a more and more vague title to all the demons of this category. The *Immortals* are also often confused, in the Hittite texts, with the sun's energy, and are, in world affairs, its emissaries or rays. Some also become single-figures, individual emissaries, and probably a simple motif of ornamental symbolism attached to certain objects of ritual and worship. They may be compared, from the point of view, with various angels and spirits of Oriental antiquity, such as, e.g., the *cherubim* (p. 1).

In Hittite class of demons is made up of the 'spirits' (*Devils*) of Ptah and Dura, (*Devils*) of the East, (*Devils*) of the West, (*Devils*) of the North, and (*Devils*) of the South. The polytheism of the Hittite period reduced these spirits also to the role of simple emissaries, who held the sun when it rose (in the sky or in the underworld), carried the flames of the divine fire, and performed other humble or vague functions (see below). Theology has made several attempts to assimilate them to secondary gods of the pantheon with proper names (e.g. *Devils* of the East, 'Cherubim' on carrying the ark of . . .). These assimilations at least enable us to reconstruct several of the phases of their original function, of which the geographical symbolism (earthly or heavenly) are a survival. These demons were once the guardian guard of the elemental divisions (two or four) of the universe; they supported the mass of the firmament at its extremities, and watched or defended the souls of the dead as they moved at the borders of the earth. Their earlier role also seems to have been considerable; they inhabit certain constellations, or the immortals on earth that are the magical counterparts of those regions of the heavenly sphere. Sometimes they inhabit a special region of the firmament (e.g. the *Devils* who dwell in the sanctuary of Ra-horakhty, the 'Abode of the Omnipotent', the magical representation of the celestial abode); sometimes they escort certain heavenly bodies (stars or planets) whose guardians they are, across the vault of heaven. Polytheism makes these bodies divine persons, and reduces them to the position of deities of the sun. Finally, theology confuses them more and more with the various 'souls' of the gods, employing the evolution in meaning of the word *Devils*. A great number of these spirits are classed together under the vague title of 'followers of

Ra', whence the priesthood derived more and more lofty imaginary meanings in relation to the lot of the dead.

The Hittite period, however, preserves a definite title for them on certain occasions of immemorial tradition, just as the material part of the cult continues to reproduce their images. The 'spirits' of the North and South become a sort of barbed representation of the forces of the world considered as composed of two halves, or they are mentioned as the guard guarding the demons of Egypt, the sun of the whole earth. They play a part also in several incidents in the succession of the king. Other spirits, as the 'demons' of one of the *Amehs*, regarded as a constellation of the Northern world (cf. *Amehs*, *Ra*, and *Amehs*, *Amehs*, 1884-1888, p. 271), perhaps the Great *Devil* of the *Amehs*-*Amehs* mentioned above), or as the guard of other parts of the aerial world, respect as figures in the mysterious ceremonies of the royal coronation or the jubilee (see *Amehs*, *Amehs*, *Amehs*, London, 1888, p. 1-11, for specimens of these figures, whose physical value has been very much exaggerated by modern writers). As a general rule, however, their role is a purely traditional one, and their actual nature does not seem to have been early understood.

Besides the immortal representations of life and vitality in various animals, birds, etc., several other spirits have left material traces of their former role in parts of sacred furniture, on which they are seen as traditional figures, symbols or even purely ornamental. The most characteristic are certain animal figures on sacred vessels and on some of the incense burners placed on board the sacred barques used in processions to carry the Egyptian gods, in representations of their journey in the other world. Thus the 'pilot' which is found on the bow of all the barques of solar gods, seems to have been one of these spirits before it became confused with the 'vitality soul' of the god; and the same may be said of the birds that are placed in rows on the bow of the boat of Ra (cf. the boat of Ra-Behet, or those on the sacred boat of Ra-Behet (a good example in the temple of Ra-Behet)). The representations of these figures in the 'followers' or at the 'souls' of the gods are of later date, and represent an attempt to adapt them to developed beliefs. They seem really to be a survival of the time when these groups of 'demons' had an active share in the general function of elementary forces. The predominance of 'functional' spirits' serving as collective names for the majority of these demons is perhaps one of the most significant facts in the evolution.

The whole question of these groups of spirits calls for an extensive study, which would give the most ancient form of Egyptian religious thought that could be attained, and would also explain the development of forms of this kind (similar to those of certain religions of modern eastern Asia) and polytheism proper. Such a study should be joined logically with an account of primitive Egyptian religion, connecting both the immemorial manifestations of all kinds of 'spirits' and the existence of a sky-god similar to the god associated in so many parts of the continent of Africa. This figure, primordial god-vital, however, has an undiminished function wherever it is found in Egypt in two parallel forms, proceeding from two great local systems of mythology: 1) the sky-god *Ra*, and 2) the sky-god *Ra* (subordinate even earlier into the sky-god, *Ra*, and the sky-god, *Ra*). A foundation might be found in the data supplied for one part in the very remarkable work of Budge in his *Gods of the Egyptians* (see list).

3. Hittite period: number, aspects, forms.—The Egyptian terrestrial and extra-terrestrial worlds are naturally peopled with an infinite number of demons and spirits. But, if we look closely, we find that this body of spirits is not so great as that of many other religions. It shows neither the abundance of the Chinese-Indo-European religions or of Hittite demonology (see *Amehs*, *Amehs*, 1884, p. 257), nor even the crowd of devils and spirits of Celtic religion. The number of *Amehs* demons, given in the list of the *Devils* of the *Devils*, is a first *Amehs* which does not correspond with any reality at first of any importance. As a matter of fact, ancient Egypt has not, to our present knowledge, left any of those terrible lists of demons and spirits which we find in so many other religions.

These legends of beings, generally invisible, but always provided with material bodies, are per-

ceptible to men at certain times, or to those who can fortify themselves with the necessary charms and formulæ. Their size does not seem ever to have been a question of interest to the Egyptians. No text mentions giants, though one passage in the Book of the Dead speaks of demons 'twelve feet high' (ch. xliv.), this modest figure being evidently the *summun*. None of the numerous paintings of demons of the under world makes them any larger than the men or beasts of the terrestrial world, except in the case of a certain number of serpents (where, however, as a rule, we are dealing with allegorical or symbolical serpents). Nor do any of the ancient texts make allusion to extraordinary dimensions. The difference between Egyptian and Oriental religions in this respect is noteworthy.¹ Another difference also is the absence in Egypt generally of the monstrous or hideous forms which are very characteristic of the majority of demonologies known to us. Most of the demons of the 'hours of hell' are wild beasts, reptiles, lizards, human forms with black bodies (*shades* [?]; these forms are more especially the 'enemies of Râ'), or somewhat colourless combinations of animal and human forms. The demons who frequent the way to the other world in the Book of the Dead are especially serpents, crocodiles, and monkeys. (The gigantic insect *abshâit* [cockroach?] is chiefly an artifice of the artist to show up the traits of this enemy of the dead.) There is only one monster—with a lion's tail, the body of a monkey (?), and the face of a bearded man—which has some claim to a terrifying appearance (Book of the Dead, ch. xxiii.). The demons of the 'seven-headed serpent' type of the Pyramids are a very unimportant exception. Finally, the fantastic animals of the desert—winged lions with hawks' heads, wild beasts with serpents' heads, with winged heads placed on their backs, etc.—are not, as we have said, *afrit*, or demons. It was actually believed that such beings existed in distant parts, as well as the lion with human head, the prototype of the Sphinx. The spirits, good and bad, attached to the celestial world, have usually the form of birds. The *rokhitu* are represented as a kind of hoopoe still existing in Upper Egypt; the *biu* have hawks' or jackals' heads—a relic of the time when they moved under the complete forms of these very animals; other *biu* are entirely birds; the *kunmamit* are either birds or men with birds' heads; and the evil demons proper, the enemies of Râ (see below) are simply serpents, antelopes, gazelles, crocodiles, or anthropoids.

4. Classes, localities, and attributes.—In the absence of demonologies composed by the Egyptians themselves, we may form a material estimate of the principal kinds of 'spirits' and their functions in *historical* Egypt from the following very condensed account, adopting the somewhat rough, but clear, classification of spirits according to the region they inhabit—the sky, the earth, the other world. This classification has the further merit of being that used in the earliest epochs by the incantation formulæ of the magicians, and there is, therefore, a possibility that it corresponds, to a certain extent, with the divisions imagined by the Egyptians themselves.

(a) *The celestial world*.—Several of the prehistoric groups already mentioned persist, but with a much less important position, and more and more confused with souls or manifestations of the gods. A certain number of spirits not mentioned above appear in the representations, but are absorbed in a subordinate or momentary

¹ The Giant Monkey, Gigantic Crocodile, and Great Hippopotamus of the Theban texts (cf. Maspero, *Études égyptiennes*, 'Manuel de Hiérarchie,' Paris, 1883) are terms designating at this time constellations, and not stellar spirits, as, indeed, is shown by their representations in the astronomical ceilings.

function, e.g. the bands of dog-headed monkeys who attend the sun at its rising and setting—a theme popularized in thousands of papyrus-vignettes, in temple bas-reliefs, and in the magnificent obelisk statues of Luxor, the temple of Mant, and the great temple of Ipsambul of the Theban period; the rowers of Râ's barque in the 9th hour of his voyage round the world; and the jackals that draw this barque at the 11th hour. In the rôle of all these anonymous troops of demons we have a clear survival of the time when they played a prominent part in the direction and protection of the heavenly bodies, each controlling a definite part of the firmament, and to this point also a study of primitive Egyptian religion ought to devote special attention.

The material fact that these spirits and others of the same type were carried to the under worlds in the sun's journey is a simple artifice of Theban theology, and Maspero (*Myth. archéol.* ii. 34 ff.) has shown that these different under worlds, compiled in actual geographical order, are a product of local mythologies which really describe the world of night and the celestial world.

The groups of very feeble demons and spirits which are devoured by the stronger ones (Pyramid Texts) are not mentioned in the texts or drawings of the historic period. No doubt the whole conception was thought barbarous (see below).

(b) *The earth*.—As in all the religions, classical and unclassical, of the ancient world, the universe of Egyptian religion is full of all kinds of demons, closely resembling those found in the religions mentioned above or among the savages of to-day. But in Egypt there is no proper classification of spirits belonging to water, to rocks, woods, marshes, etc. Furthermore, their multiple rôles in dreams, or in illnesses of man or beast, seem to belong rather to the popular domain than to official beliefs. It would appear, from a study of the texts of both kinds, that historic Egypt had already, to a great extent, got rid of that *naïveté* which is the characteristic of polydæmonism in primitive Animism, and which persists so strikingly in Chaldæo-Assyria in the organized cults. The distinction between official and popular religion, however, is still a delicate question of the appreciation of facts, and especially of the period. It is, nevertheless, certain that phenomena such as storms, floods, and epidemics are attributed to the gods in historic Egypt, and not to the demons, as in Chaldæo-Assyrian belief. On the other hand, the inscriptions from the temple of Abydos prove that the priesthood frankly admitted that demons were continually prowling about in the air, ready to do harm, and that it was necessary to purify the king's retinue with charms, as it proceeded to the temple. The fumigations and incantations that took place at funerals bear witness to the same practice, while the famous inscription of the Princess possessed of Bakhtan proves the official belief in demoniacal possession. The literature shows us that the demons, as in all other countries, inhabited by preference desert places, the borders of marshes, and cemeteries (where they become confused with ghosts properly so called); and it is a certain fact that their power was greatest at night. They were also most powerful on certain days of ill omen, on which the influence of the good gods was diminished, as is proved by the horoscopic papyri of Leyden and London. The light of the sun put them to flight. They were combated, according to varying circumstances, by means of talismans, amulets, incantations, etc., and in all these innumerable details Egyptian differs from other religions in a material way only, and not in doctrine. It is also very difficult to see a specially Egyptian characteristic in the almost complete confusion that exists, in all these attributes of the earthly demons, between demons proper and the ghosts of the dead; and, as the latter have the same name of *khui* in a number of cases, it is sometimes almost impossible

to distinguish whether such and such a case of illness, dreams, possession, torment, etc., is the work of a demon or of the dead. Sometimes the Egyptian text is quite clear, e.g. in the formulæ relating to 'the imprisoning of the shades of the dead that can do harm' (Book of the Dead, ch. xcii. line 10); and we can proceed gradually to certain classifications by variants.

When well considered, Egyptian ordinary life does not seem to have been so much overshadowed and tormented by the constant fear of demons as in the case of many other religions of civilized and non-civilized peoples. While the official cult admits the hidden presence of numerous demons, we do not find it going the length of constantly trying to dispel them, e.g. during the performance of duties, at the opening of the tabernacle, or, again, at the time of sacrificing. (Porphyry, however, says that the priests beat the air with whips to put the demons to flight [*de Philos. ex oraculis haurienda*, ed. Wolf, 1856, p. 148].) The Egyptians do not, like the Indians, trace trenches round their offering. (Notice, however, in the foundation-rites of a temple, the purification of the ground by means of a mock chase of evil spirits, performed by the king and figures dressed as gods.) Nor does any Egyptian text ever say that demons are specially dangerous at the time of death, as is taught, e.g., in the Avesta. The dead, it is true, are protected against demons during the preparations for the funeral; they are surrounded, on their way to the grave, by every kind of magical precaution; at the grave itself, talismans and phylacteries of every description protect the coffin and mummy (note that these precautions are meant both to ward off the demons of this earth as they prowl around the grave, and to accompany the dead, by magic, on his journey to the other world); mystic eyes are painted on the proto-Theban sarcophagus, and other precautions of the same kind are the finishing touches. But all these precautions do not amount to so much as we find, in this connexion, in civilized religions of the highest organization; and we may say that the dying Egyptian was not tormented by terrors of the demoniacal order so much as most races with systems of organized beliefs. We must not be misled by the constant presence and importance of demons in the literature. No one would think of maintaining that the thought of Satan and his demons was a continual weight on the ordinary life of a man of our European Middle Ages; and yet the popular tales, processes of justice, legends, and even theology itself, gave the demons of this time a power, a multiplicity, and a constant aggressiveness which are greatly in excess of anything that we learn of ancient Egypt in this respect.

(c) *The other world* (this term including the various classes of regions separating Egypt from the abodes of the dead, under whatever form they may be conceived, and these abodes themselves: paradise, Elysian fields, caverns, 'passages,' *rositiu*, etc.).—An account of all the demons of the other world cannot be attempted here. A good idea of them may be obtained from the indexes in the various editions of Budge's *Book of the Dead*, or from Maspero's *Études de mythologie et d'archéologie égyptienne*, ii. 1-180 (for the royal tombs). These demoniacal spirits are as numerous as the devils of the under world in all other religions. They are the inhabitants of night. It is worthy of remark that none of them has any symbolical value; the majority are simple repetitions of beings like the mischievous or terrifying beings of the earth. In the group of books of the Book of the Dead type we have tree-spirits, monkeys, crocodiles, a considerable variety of serpents, lions, etc., and the vignettes of the Theban epoch employ all the precision that could be desired on the subject. In the series of the type 'Book of Hours,' 'Book of Hell,' 'Book of the Gates,' etc., we have a more sombre view of the demons, yet still of the same specific character: the serpents vomit flames; a great number of these demons, in the shape of men, of animals, or of mixed form, are armed with weapons of various kinds, but are not fantastic. Their names are far oftener functional epithets than true proper names, and this fact is of importance for the historian of religions. The onomastic list, however, is quite short, and shows the poverty of Egyptian thought on this point: 'the Archer,' 'the Pikeman,' 'the Lancer,' 'the Cutter,' 'the Ripper,' 'the Bounder,' etc. The female demons have the same names, or are called 'the Lady of Terror,' 'the Lady of the Sword-thrusts,' 'the Brave,' 'the Violent.' The serpent demons are called 'Life of the Earth,' 'He who lives on gods'

(=eater of gods [7]). The guardian serpents Akaba, Jetba, and Tokahiru, and the viper Naga are deities by this time rather than demons (see below).

Generally speaking (without distinguishing the various classes of under-world literature), the original Animism of Egypt is reflected in the number of demons that are simply the 'spirits' of material objects: a thread and its different parts (ch. cliii.); a boat, each part of which has its genius (ch. xcvi.); posts, doors, parts of a building, boxes, etc. This process is all the more logical from the fact that Egyptian beliefs naturally admitted that every object, natural or manufactured, on this earth possessed a spirit or a demon—rocks and trees as well as houses, pillars, sceptres, clubs, etc.; and iconography sometimes shows these spirits with their heads appearing out of the objects they inhabit. The evolution of belief consisted mainly, here as elsewhere, in gradually 'detaching' the 'spirits' from their objects; and the demons of our present discussion were transformed step by step into *guardians*, and, in the case of some of them, into *masters*, of these objects. The latter privileged members have contributed to the number of the gods.

5. *Nature*.—By means of a large number of accurate texts, we can form an estimate of the constitutional character of the demons and spirits of Egypt, and by the aid of the ancient texts we can get back to the very beginning of their formation. All our information is in absolute conformity with the general animistic character of the primitive religions of the Nile Valley. The universality of 'spirits' in Egypt is well known, and we have just seen that there is not a single being or object, natural or manufactured, but has its demon or demons. Their different names of *biu* and *khui* did not imply any difference of nature originally, and the ancient texts show, by variants, that the two terms are frequently interchanged. They merely signify the different degrees of carnal materiality of these souls or spirits—which are always material (see BODY [Egyp.]). The word *biu* seems later to have tended to belong to demons and spirits of a beneficent character, while the name *khui* was given by preference to maleficent spirits; but this indefinite classification has arisen purely from later dualistic thought (see DUALISM [Egyp.]).

Now, these texts clearly prove that the demons are absolutely the same in the essentials of their nature and attributes as the most ancient Egyptian gods. The formulæ confuse them constantly. Demons and gods have the same 'determinative' in hieroglyphic script (the three signs of the 'axe' [really a mast with two pennants], or the archaic sign of three hawks perched on a sort of gibbet). At first, the strongest devoured the weakest impartially; and later, the dead, assimilated by magic to these strongest members (cf. Pyramid of Unas, line 506 ff.), are shown devouring the *notiru* (gods) as well as the *khui* (demons).

A single characteristic will serve to distinguish them, and to indicate the process by which the gods gradually emerged from the dense crowd of *demons*. The demons, or *genii*, or spirits, are *anonymous* groups, with only a collective name, and confined to a special activity or settled function. As they did not all have the same activity or the same importance, certain groups of them rose by a slow process of elaboration to higher dignity. The others remained for ever a few millions of obscure spirits, whose mode of life was of no importance; or else they formed the troops of spirits of which examples are given in § 2. In the groups with important functions, the characteristics led to fusion with a more individual being provided with a proper name. Difficult as it is to

draw the line of demarcation between a god and a demon in such a conception, a careful examination of the texts leads to the conclusion that the mark of a god is possession of a name. A demon possessing a name is already a god, a *notir*. The case is incontestable for well-established gods like Sorku (the crocodile) and Ririt (the hippopotamus); it is equally incontestable for demons like Apōpi and the twenty-three great serpents of the Pyramid formulæ, or the other reptiles named in the rest of the sacred literature; it can be demonstrated for demons like the cat of the sacred tree *ashdu* in the famous ch. xvii. of the Book of the Dead, and for all the principal demons in the descriptions of the other world. Each one is in every way a true god from the time that it has a name, both for its life and for its aspect. Power, the amount of reverence inspired, and the importance of functions are only questions of degree, insufficient to separate, in this religion, a number of humble gods from demons. Even specialization in a unique or momentary action is not a criterion. Naprit, demon of harvests, Ranninit, Maskhonit, the 'Seven Hathors,' and many others of this type are deities rather than demons, from the very fact that they have names; and, if the cult they receive is humbler than that of other gods, it is identical in conception and form. (Here there is a noteworthy difference from what is said of Semitic spirits by Lagrange, *Rel. sem.*², Paris, 1905, p. 16.)

We may now class the innumerable personalities mentioned in the Egyptian texts not among the demons and spirits, but, more rationally, as gods. The following are the chief: the spirits of the seasons, months, days, hours, *decani* (see CALENDAR [Egyp.]), the winds, planets, stars, etc. The astrological nature of nearly all these entities will be noticed by all, and confirms what we have seen of the stellar character of numbers of these groups of spirits before polytheism. The texts show, further, that a number of those spirits, escaping the secondary character of the mass, were treated exactly as true gods by the Egyptians, with a tendency to be assimilated to the principal great gods. It will be observed also that the demons remaining in anonymous groups still retain some worship on certain occasions in the historic epoch. Under the Memphites, for example, there are priests of the 'spirits' of Heliopolis, Buto, and Nekhen (=el-Kab).

The fact that demons become gods by a process of 'emergence' goes a long way to explain why there are not in Egyptian religion, as in other religions, lists and hierarchies of demons and angels. Not only is there nothing resembling the sort of fixed castes of angelologies or demonologies of other races, but there are not even chiefs of groups or protagonists, like, e.g., the Chaldaean demon of the south-west wind. The fact is that, as soon as a primitive group attained to importance in the gradual comprehension of the world-forces, it detached a god from itself, who absorbed his group entirely or became a chief; so that the demons, good and bad, always arise directly from a god, and naturally share his character and attributes.

6. *Rôle and character.*—Just as the demons have at first no hierarchy, so they have no general characteristic rôle, no functions of general cosmogony, directed for or against the harmony of the κόσμος. The distribution of their activities into functions that are always very limited and highly specialized is a strong proof of the antiquity of their formation. Their power does not go the length of raising a scourge like a tempest (see above), or, like the Indian demons, of preventing rain. This paucity of attributes, in a character otherwise always material, and this distribution of groups of spirits without classification, make it quite comprehensible how their final rôle and their good or bad aspect depended, in the era of polytheistic formations, upon the relative character of the gods round whom they were grouped, since such a god was simply the *synthesis* of the activities of which the demons were the analysis. The god himself was at first of vague significance as regards his general rôle in the

progress of the world; it was only when he had acquired a more precise energy that he brought along with him his troop of demons—good or bad for man. It would thus be precarious to attempt much precision regarding Egyptian religions. The necessarily *un-moral* character of the spirits does not allow of any classification which would arrange them by 'angelology' and 'demonology'—these terms being used with a moral signification. Even in the historic period their original character remained ineffaceable: the demons were, first of all, the inhabitants of a place or an object, the guardians of a locality, of a door, a passage; they ended, more or less, by having a god as sovereign; while they modelled themselves on his nature and tendencies. But one point is clear, that they are subject to their god, and consequently favourable and subject to his relatives and friends, and hostile to others. They are, then, good spirits for the living or dead man who is assimilated by worship or magic to the congregation of their master, bad spirits to all others; and the whole Book of the Dead, which has not the least moral character (even the famous ch. cxxv. of Confession), is essentially neither more nor less than a series of proofs that magic alone is capable of winning over the demons of the other world, and making them defenders of the dead, or at least submissive spirits. Nothing shows the persistence of these conceptions so well as certain passages, preserved down to the historic period, in which, e.g., the demon, 'the serpent who devours souls,' is considered dangerous to the sun itself, which has to take great care when passing over its back (Tomb of Seti I., third hour of hell; theology has invented symbolic explanations, but the primitive fact is clear).

7. *Final organization.*—The organization of all these incoherent spirits, united by chance facts (and by nothing but facts) around multiple gods of early polytheism, was the result of great labour. It must have taken local theologians a long tale of centuries; nevertheless it always presented great gaps. It can be partly reconstructed by the help of the texts of the Memphite and proto-Theban coffins. The unifying of provincial eschatologies under the form of the Theban 'Book of the Dead' or of the various 'Books of the Under World' ('Hours,' 'Doors,' etc., of the royal hypogees, etc.) has been one of the greatest aids to this work of harmonization, which adjusted the demons more or less successfully to the gradual conception of the κόσμος.

This formation of armies of good and evil, being the final characteristic of unified Egyptian religion, is too important to be studied in connexion with demons alone. It will be treated in the art. DUALISM (Egyp.). For the understanding of the present article we may note here only the following facts: the grouping around the sun and his companions of former adjutant demons of the Stars, or vassals of Thoth, Horus, Hathor, etc.; the inverse grouping, around the Great Serpent Apōpi and his officers, of the chief demons opposed to the sun. Finally, a god of order and light, Osiris-Râ, is opposed, with all his allies, to a Sit-Apōpi, the prince of evil and darkness, and the enemy of order. The struggle continues without truce and with its fixed dates (see CALENDAR [Egyp.]), until, in the last period, Sit-Apōpi becomes confused in Coptic religion with Satan. This dualism, already developed in the Theban era, throws light upon the representations of the under world of this period, in which armies of demons, under command of Râ, tear, stab, decapitate, slaughter, and burn legions of the damned.

The damned are not sinners in the moral sense, but adversaries of Râ, conquered enemies. This task was reserved for the last centuries—to transform hostility to the sun, Râ, into hostility to the moral law of Râ-Osiris; but the task was accomplished (see DUALISM [Egyp.]). Even the forty-two judges of the Negative Confession are only silent demons with no moral rôle, and quite artificial; and Shait, the demon who devours the souls rejected by Osiris, is only an entity with no moral character.

The absence of a part in the good or evil of the moral world appears still more clearly in the conception of the rôle of demons in connexion with the living. There is no single Egyptian text in which they have any part in the sins of men, or in suggesting evil thoughts, or even, as in Assyria, in sowing seeds of envy, misunderstanding, and family quarrels. They are restricted exclusively to physiological evil.

Petrie's remarkable book, *Personal Religion in Egypt before Christianity* (London, 1910), shows, however, a class of demons in the hermetic literature who play a perverse part (see pp. 42, 46, 54, 86, 115, 160). But, in spite of the author's efforts to assign the first compositions to a very ancient period, the earliest date he can reach (6th cent.) merely succeeds in showing the coincidence of these new ideas with the Persian dominion; this emphasizes the resemblance between these non-Egyptian characters and the teaching of the Persian religion. We may add that at no time in Egyptian religion is the army of demons ever seen increasing its ranks by the soul of a single sinner.

8. Popular demonography.—The phase of demons which has attracted the keenest attention of Egyptologists is their rôle in popular life and literature and in current magic. The causes of this are the abundance of information furnished by papyrology, the picturesqueness and precision which such documents give to the knowledge of Egyptian life, and the data they supply for the study of magic. From a comparative point of view, however, such a study does not exhibit many of the characteristic traits. An account—even highly condensed—of the activity of demons in Egyptian life or superstition would require considerable space (see CHARMS AND AMULETS [Egyp.], MAGIC [Egyp.]). As everywhere, here the demons are at the command of the magician, to bring about dreams and illnesses, human or animal; or else they themselves cause these phenomena, just as they cause madness and epilepsy (see DISEASE AND MEDICINE [Egyp.]).

The horoscopic or simply superstitious influence of days, the force of the voice, the sensitiveness of demons to song, to the *carmen*, the chant, are facts that apply to all popular religions. The purely Egyptian traits are not many: the demons have sex (see Hierarchic Papyrus); there are none of the sexless demons of Assyria. The popular literature (see the Story of Sâni-Khamois) seems to indicate the possibility of belief in *incubi* or *succubæ*, but the passages, which are very numerous, require to be discussed carefully. The threatening aspect of demons in connexion with infants (see CHILDREN [Egyp.]; also Berlin Papyrus, 3027) is also the same as appears elsewhere. On the other hand, we must remember the restrictions made above—the abundance of demons in the magic and literary papyri is not to be taken as a faithful picture of the actual life of the Egyptians. It will be noticed, further, that the Egyptians never mention demons who are wantonly cruel, or thirsting for blood, death, and carnage, as in Chaldaeo-Assyria, or demons who dare to *attack* the gods (the combats between Râ and the demons of Apôpi are *antagonism*, which is a different thing). The purely animistic character of these demons, struggling to live on their own account, but never doing evil for evil's sake, is worth noting. Finally, the sum of all the innumerable details supplied from Egyptian evidences shows us a state of affairs (1) differing only by attenuation from that of the ancient civilizations of the classic East or the societies of the savages of modern Africa, and (2) somewhat similar to the classical Mediterranean civilizations of the Europe of the Middle Ages or of the Renaissance.

As in all religions during decline, we observe at later epochs the growth of demoniacal beliefs in connexion with black magic, and in opposition to the official cults. The combination of Egyptian

with other Asiatic or Mediterranean demonologies shows itself in the demotic papyri, and particularly in the *tabellæ devotionis* (see MAGIC [Egyp.] and, provisionally, Budge, *Egyptian Magic*, or Erman, *Die ägypt. Rel.*, ch. vii.).

9. Ghosts.—The complexity of the Egyptian notion of personality is an initial difficulty in the way of classifying the phenomena relating to ghosts. The eight or nine elements which, in the historic period, constitute a person (see BODY [Egyp.]) have each their fate, form, and habitation in the second existence. The only one of these that concerns our present purpose is the *khu*.

The etymology of the word *khu* is still very doubtful, and we cannot deduce any indication whatever of the primitive rôle from the radical meaning of the word. The sense of 'luminous,' 'brilliant,' has suggested to several authorities the explanation based on the phosphorescence of putrefying flesh, or on the will-o'-the-wisps playing in certain parts of Egypt on the skirts of the desert, supposed to be the favourite haunts of ghosts. A loftier interpretation has been proposed, taking the word *khu* as a brilliant spark, a part of the solar substance. But this seems to involve the theological speculations which played upon the amphibological meaning of the word when solar theories held the first rank in eschatological doctrine. The signification '*honoris* or *timoris causa*,' which would attach a complimentary meaning of 'resplendent' or 'glorious' to the epithet *khu* given to the ghosts of the dead, seems more probable, but has never yet been definitely proposed by the Egyptological School. The present writer would suggest, finally, a connexion between this name of 'luminous,' which is the intrinsic meaning of *khu*, and the special soul 'which shines in the eyes,' and to which a great many peoples accord a particular personality. The observation of the difference between the lustre of the living eye and the dullness of the dead eye suggested, in Egypt as among those peoples, the idea of a special 'soul-force' having magic virtues of its own (which would justify, besides, all the magic relating to the power of the look), and continuing to live after death with the various attributes which we accord to ghosts. There is, however, no formal proof by texts of this explanation.

The *khu* is generally a wretched being. It has never been credited with a lofty rôle. It is *a priori* a wandering, unhappy, hungry being, a sort of outcast from the great crowd of the dead and other 'spirits'—such as a dead man, *e.g.*, whose grave has been destroyed, and whose soul, double, etc., have perished by privation or by the attacks of monsters. Accordingly, we never find the *khu* of a king or a nobleman appearing in the texts in the rôle of 'ghost,' as this rôle is always a humble and maleficent one. The attributes of the Egyptian ghost, then, reduce themselves finally to those of harmful demons, and agree very largely with what is believed on the subject in all religions. Ghosts afflict people with 'demonic possession' in all its varieties; they torment in dreams (*q.v.*); they find their way into the interior of the body of living people, and cause innumerable ills (see DISEASE AND MEDICINE [Egyp.]); they appear suddenly to terrify the living, especially at certain hours of the night, and preferably in the neighbourhood of cemeteries, or in places reputed to be their favourite haunts (cf. Maspero, *Contes populaires, passim*); they attempt to violate any woman they can take by surprise in a lonely place (*e.g.* one of the chapters of the Book of the Two Ways, in which a magic power is accorded the *khu* 'of taking by force any woman he wants'); or, in order to devour living substance, they throw themselves into the body of beasts, excite them to frenzy, and cause them to die; the *khuu* of women dying in child-birth aim especially at causing infants to die (cf. the curious formulæ of the papyrus *Zaubersprüche für Mutter und Kind*, published by Erman, 1901; see also Erman, *Religion*, p. 158, etc., for other good examples of the part played by ghosts; this belief is analogous to numerous beliefs throughout all Africa). The *khuu* of suicides, executed criminals, unburied dead, and shipwrecked sailors are particularly tormented and miserable. It was to them that the magician of the later centuries applied by preference—conjuring, invoking, and putting them at his service for his thousand and one evil purposes:

tormenting in sleep, causing death by enchantment or by fever, assisting lovers to exact vengeance, or helping those who wished to attract or recall an unfaithful mistress (cf. the series of *tabellae devotionis*, the dominating Egyptian element in which is nevertheless tinged with magic of Asiatic or North African origin). The baleful activity of all these ghosts is naturally specially excited at certain unfavourable times in the calendar (see CALENDAR [Egyp.]), and they come in their hordes at these times to join the troops of evil 'spirits' struggling against order (see DUALISM [Egyp.]), just like a band of plunderers accompanying the real combatants. Very seldom do we find mention of a *khu* playing the simple inoffensive part of a ghost (Budge cites one example, in *Egyp. Magic*, Lond. 1899, p. 219, of a *khu* which points out to a mortal a suitable place for building a tomb), this form of activity being reserved especially for the 'doubles' and the 'souls' (see STATE OF THE DEAD [Egyp.]).

ro. Conclusions.—The original complete confusion of troops of demons (or spirits) with the earliest gods has been affirmed repeatedly in this article. On the other hand, it has been said that the spirits of the dead were confused with the demons as to habitat, needs, functions, character, and powers. This double assertion would require a more detailed demonstration than is here possible. Presented thus in a condensed form, it seems to lead, by syllogism, to an equating of the spirits of the dead with the first gods, in whole or in part. But, as a matter of fact, no theory of Egyptian religion could be more contrary to truth or more capable of vitiating all knowledge of that religion. Never at any time or under any form did the Egyptian dead become gods. The case of the sons or heirs of gods (chiefs and kings) belongs to an entirely different category, and the confusion of the dead with Osiris, or some other of the gods of the dead, by magic or by religious process is either an eunymous assimilation or an absorption of the dead man's personality by an already existing god. It is, therefore, absolutely necessary to insist on the fact that the demons and spirits, the original forms of the Egyptian gods, have nothing to do with the spirits of the dead in their essential nature, but merely resemble them in the aspects of their activity (see STATE OF THE DEAD [Egyp.]). Between the nature of 'spirits' and 'demons'—all those myriads of beings, this 'dust of gods' from which the gods sprang—and the nature of the spirits of the dead there is an impassable limit set which Lang has called 'the abyss of death.' The spirits, or *khuu*, of the Egyptian dead come from beings who did not exist before their birth on earth, who have known physical death, and are liable to suffer the 'second death,' or final destruction. None of these three characteristics can be applied to the demons or genii any more than to the first of the actual gods, who became detached from their various innumerable troops of spirits. Later theologies credited the gods of the historic period with having been born, and even attributed to Osiris or his mythological 'doublets' a physical death. They never touched on the third characteristic. And, on the other hand, Egypt never knew of an ordinary mortal who became a god, or for whom there was such a possibility even under the humble form of a demon.

LITERATURE.—The provisional state of the sources and evidence regarding demonology has been noted in the course of the article. The whole theory of spirits has never been gathered together in one work; views on the spirits, however, are scattered through all the works that discuss Egyptian religion. We may only mention, among those in which the information is more specially grouped, the following: E. Amélineau, *Prolegomènes*, Paris, 1903 (where an exactly opposite euhemeristic theory is supported at length); E. A. W. Budge, *Egyptian Magic*, London, 1901, *Gods of the Egyptians*, do. 1904, *Liturgy of Funerary Offerings*, do. 1909, *Opening of*

the Mouth, do. 1909, and *Book of the Dead*, do. 1909; A. Erman, *Die ägypt. Relig.*, Berlin, 1905; G. Maspero, *Études de mythol. et d'archéol.*, vol. II., Paris, 1893, and *Contes populaires*, do. 1903; W. M. F. Petrie, *Religion and Conscience in Ancient Egypt*, London, 1898. A certain number of details are given in the manuals of Egyp. religion of Ermon (Paris, 1910), Petrie (London, 1908), Virey (Paris, 1910), and A. Wiedemann (Münster, 1890). The documentation proper naturally fills the whole series of Egyptological monumental bibliography. See especially, besides the works already mentioned, E. Lefébure, *Hypogées royales de Thèbes*, Paris, 1833; and P. Lacau, *Sarcophages antérieurs au Nouvel Empire*, Indexes, Cairo, 1903-1906.

GEORGE FOUCART.

DEMONS AND SPIRITS (Greek).—Students of Greek literature cannot fail to be impressed by the complex system of the Olympian theocracy, and by the richness of legendary fable which envelops it. In variety of detail and precision of outline it seems to be separated by long periods of development from the vague beliefs and rude ceremonies which characterize the religions of primitive man. But, while it is certain that the Greek gods, as they appear in literature, are the product of a long course of evolution, beliefs in the existence of various supernatural beings, which belong to an earlier stratum of religious thought, and can be paralleled from the records now available of savage superstitions, continued to maintain themselves during historical times. Of these intermediate beings the most important are those known as demons.

1. In early times.—In early religion the most powerful forces are those which are comprehensively attributed to Animism. To these belong the notions that all natural objects are informed with a living principle akin to the human soul, and that the souls of the dead continue to visit the haunts with which they were familiar in life. To the operation of these spiritual powers are ascribed such of the vicissitudes of life as cannot be explained by visible agencies. Similarly, it is inferred that the soul of a living man may be temporarily detached from its normal habitation in the body, as in sleep or trance; and that the bodies of the living may be possessed by alien spirits, as in epilepsy, lunacy, or hysteria. There is plenty of evidence that beliefs of this kind flourished in ancient Greece as vigorously as they have survived in mediæval and modern times; and the general name of 'demons,' which the Greeks gave to certain of these invisible but potent spirits, has been adopted by modern writers, who employ the term 'demonology' to describe the science relating to supernatural beings with a nature intermediate between that of gods and men.

But, in the exposition of these beliefs, we are met with difficulties arising from the nature of the evidence. We cannot reach the crude fancies of the vulgar in their original form, but are obliged to view them through the transfiguring medium of literature. The rationalizing genius of the race stands in our way. The notices relating to demons are drawn, for the most part, either from the writings of philosophers, who endeavoured to harmonize current superstitions with their own interpretation of the universe; or from poetry, where the creative imagination insensibly tones the simple outlines of the popular conception.

The earliest text requiring notice is the passage of Hesiod (*Op.* 122 ff., 251 ff.) in which he identifies the demons with the souls of those who lived in the Golden Age. They are described as continuing in the upper world, kindly guardians of men, distributors of prosperity and wealth, but wrapped in darkness so as to be invisible while they wander over every region of the earth. Here we meet the statement that the demons are the souls of the dead, overlaid with the legend of the Four Ages and the deterioration of mankind. For the popular belief on which it rests we must refer to passages

where the Greek *δαίμονες* is employed, like the Latin *manes*, to denote the spirits of the departed (Lucian, *de Luctu*, 24; for the evidence of inscriptions, where *θεοὶς δαίμονες* = *dis manibus*, see Roscher, i. 929; Frazer, *Pausan.*, 1900, iv. 24). The literary evidence is hardly less conclusive, when we find Darius and Alcestis described as demons in reference to their condition after death (*Æsch. Pers.* 623; Eur. *Alc.* 1003), and when the Muse prophesies that Rhesus, though dead, shall rest hidden in a Thracian cave as a man-demon (*ἀνθρωποδαίμων*, Eur. *Rhes.* 971). See, further, Usener, *Götternamen*, p. 248 ff.; a somewhat different view is taken by Rohde, *Psyche*, i. 95, 153. As the shades of ancestors, so long as they are treated with due respect, are expected to show favour, a reference to the 'good demon' sometimes implies nothing more than this (Waser, in Pauly-Wissowa, iv. 2012). But the good demon also appears in circumstances which cannot be associated with ancestor-worship. In Boeotia a sacrifice to the good demon was made the occasion for first tasting the new must (Plut. *Qu. Conv.* iii. 7. 1, p. 655 E); and at Athens it was the custom after dinner to pour out a small libation of unmixed wine in his honour (Aristoph. *Eg.* 85, etc.). At other times he is the personification of good fortune, as the protecting spirit of a community, a family, or an individual; in this sense, Nero arrogated to himself the title of 'good demon of the world' (*CIG* iii. 4699). See Rohde, i. 254 f.

With the various manifestations of the good demon we may contrast cases where the influence of the spirit was pernicious. An evil spirit was often conceived as a ghost.

A good illustration is afforded by the story of Euthymus the boxer, who fought with a 'hero' enshrined at Temesa in S. Italy. This was the ghost of one of Odysseus' crew, Polites or Alybas, who had been stoned to death by the people of Temesa for ravishing a girl. Every year the ghost required the dedication to him of the fairest maiden in Temesa as his wife, which was yielded by the townsfolk in order to save themselves from his wrath. The practice was of immemorial antiquity at the time when Euthymus chanced to come to Temesa, and, having entered the temple, saw the maiden, and fell in love with her. So Euthymus put on his armour, and, when the ghost appeared, withstood his assault and vanquished him; and the hero, driven from the land, plunged into the sea, and was never seen again. Pausanias, who tells the story (vi. 6. 7-11), as well as other authorities (Strabo, p. 255; Suid. *s.v.* *Εὐθύμους*), had seen a picture illustrating the event which he records, and, in the course of describing it, he quaintly remarks: 'The ghost was of a horrid black colour, and his whole appearance was most dreadful, and he wore a wolfskin.' The ghost-idea is less prominent in the story of the demon of Anagyrus, one of the Athenian demes, who destroyed the family of a neighbouring peasant for a trespass committed on his sanctuary (Suid. *s.v.* *Ἀναγυράσιος δαίμων*).

Hesiod (*Op.* 159, 172) distinguished between 'heroes' and 'demons,' and later philosophical speculation treated demons as belonging to a higher grade of dignity (Plut. *de Def. Or.* 10, p. 415 B). But in stories like the above the two terms are used without distinction; and heroes as ghostly beings were considered so dangerous that persons passing by their shrines were warned to keep silence, lest they should suffer injury (Hesych. *s.v.* *κρηττονας*). The belief that a hero is incapable of conferring blessings, and is only powerful to work ill, is enforced by Babrius, *Fab.* 63.

Other evil demons are represented as specially attached to an individual. Thus, the dread and strange vision of monstrous and fearful shape which appeared to M. Brutus in his last campaign announced itself to him as his evil demon (Plut. *Brut.* 36). Or an avenging demon may be the instrument appointed to punish the crimes of a particular family, as when, in the *Agamemnon* of Æschylus (1477), after the murder of her husband, Clytemnestra boasts that she herself is the incarnate demon of the Pelopids, 'so gross with overgrown flesh.' In such capacity the evil demon

often bore the special title of 'Alastor'; and in the *Persæ* (357) the slave Sicinnus, who entrapped Xerxes into a fatal manœuvre, so that he lost the battle of Salamis, is described by the Persian messenger to Atossa as having been inspired by an *alastor*. Sophocles, in referring to an action impossible for any one but a madman, does not hesitate to say: 'Who would choose this, unless maddened by avenging fiends?' (*δοῖς μὴ 'ἔδλασ-τρῶν νοσῶ* [*Trach.* 1235]). It would be easy to multiply instances where demonic agencies are made responsible for good or evil fortune; and it is not surprising that the prevalence of such opinions opened the door to chicanery and imposture. Among the crowds of oracle-mongers, diviners, and interpreters of dreams, who swarmed at Athens during the latter part of the 5th cent. B.C., were some who professed to foretell the future by the agency of familiar spirits obedient to their summons. A notorious instance was Eurycles the ventriloquist (*ἐγγαστρίμυθος, στερνήμυθις*), who, by giving utterance to his oracles in a feigned voice, persuaded his hearers that they were the pronouncements of a demon lodged within his own breast (Aristoph. *Vesp.* 1019; Plat. *Soph.* 252 C and the scholl.). This proceeding corresponds exactly with the methods of savage magicians, as reported by E. B. Tylor in his article on 'Demonology' (*EB*, vii. 63).

The notion of a guardian spirit, which watches over a man from his birth, directs his actions, and may be either friendly or hostile, was widely entertained among the Greeks. It is best expressed in the famous fragment of Menander (550 K.): 'By every man at birth a good demon takes his stand, to initiate him in the mysteries of life.' This is not a literary fancy, but a popular opinion: 'There are many who have a craven soul, but a good demon,' says Theognis (161). Or we may appeal to Pindar, a witness of a very different type (*Pyth.* v. 122): 'The mighty purpose of Zeus directs the demon of those whom he loves' (see W. Headlam, in *JPh* xxx. [1906] 304; Rohde, ii. 316; Usener, 296). But, in regard to the force of particular passages, there is room for disagreement. The word *δαίμων* is used in such a way that it is often difficult to seize its exact significance in a particular context. Thus, besides bearing the special meaning with which we are now concerned, it may be employed either (1) as a synonym of *θεός*, distinguishable, if at all, as expressing the Divine power manifested in action rather than the Divine personality as an object of worship; or (2) in the abstract sense of *destiny*. Yet, although we may sometimes hesitate (as, e.g., in Eur. *Ion*, 1374, *Supp.* 592) between the abstract and the concrete meaning, with a view to the selection of an English equivalent, it is unlikely that to a Greek the word ever became so colourless as the tr. 'fate' or 'destiny' suggests. That this was the original sense, as has been suggested in recent times (Gruppe, *Gr. Mythol.* 991, n. 4; see, however, Usener, 292), is hardly credible.

We have seen that the belief in the separate existence of the soul after death leads to the assumptions that the souls of the dead are powerful over the living, and that other potencies of a similar character, spirit-like but not souls, exist independently and visit the earth. A further step is taken when these demons are regarded as capable of entering into and possessing human bodies (Gomperz, *Greek Thinkers* [Eng. tr. 1901], ch. i. §§ 5, 6). This may be illustrated by the various instances in which the human representative is permanently or temporarily identified with the Divine being whose power he assumes. Hermes became incarnate in the ministrants at the oracle of Trophonius at Lebadea (Pausan. ix. 39. 7), Bacchus in the *mystæ* (schol.

tormenting in sleep, causing death by enchantment or by fever, assisting lovers to exact vengeance, or helping those who wished to attract or recall an unfaithful mistress (cf. the series of *tabellae devotionis*, the dominating Egyptian element in which is nevertheless tinged with magic of Asiatic or North African origin). The baleful activity of all these ghosts is naturally specially excited at certain unfavourable times in the calendar (see CALENDAR [Egyp.]), and they come in their hordes at these times to join the troops of evil 'spirits' struggling against order (see DUALISM [Egyp.]), just like a band of plunderers accompanying the real combatants. Very seldom do we find mention of a *khu* playing the simple inoffensive part of a ghost (Budge cites one example, in *Egyp. Magic*, Lond. 1899, p. 219, of a *khu* which points out to a mortal a suitable place for building a tomb), this form of activity being reserved especially for the 'doubles' and the 'souls' (see STATE OF THE DEAD [Egyp.]).

10. Conclusions.—The original complete confusion of troops of demons (or spirits) with the earliest gods has been affirmed repeatedly in this article. On the other hand, it has been said that the spirits of the dead were confused with the demons as to habitat, needs, functions, character, and powers. This double assertion would require a more detailed demonstration than is here possible. Presented thus in a condensed form, it seems to lead, by syllogism, to an equating of the spirits of the dead with the first gods, in whole or in part. But, as a matter of fact, no theory of Egyptian religion could be more contrary to truth or more capable of vitiating all knowledge of that religion. Never at any time or under any form did the Egyptian dead become gods. The case of the sons or heirs of gods (chiefs and kings) belongs to an entirely different category, and the confusion of the dead with Osiris, or some other of the gods of the dead, by magic or by religious process is either an eunymous assimilation or an absorption of the dead man's personality by an already existing god. It is, therefore, absolutely necessary to insist on the fact that the demons and spirits, the original forms of the Egyptian gods, have nothing to do with the spirits of the dead in their essential nature, but merely resemble them in the aspects of their activity (see STATE OF THE DEAD [Egyp.]). Between the nature of 'spirits' and 'demons'—all those myriads of beings, this 'dust of gods' from which the gods sprang—and the nature of the spirits of the dead there is an impassable limit set which Lang has called 'the abyss of death.' The spirits, or *khu*, of the Egyptian dead come from beings who did not exist before their birth on earth, who have known physical death, and are liable to suffer the 'second death,' or final destruction. None of these three characteristics can be applied to the demons or genii any more than to the first of the actual gods, who became detached from their various innumerable troops of spirits. Later theologies credited the gods of the historic period with having been born, and even attributed to Osiris or his mythological 'doublets' a physical death. GEORGE FOUCART.

DEMONS AND SPIRITS (Greek).—Students of Greek literature cannot fail to be impressed by the complex system of the Olympian theocracy, and by the richness of legendary fable which envelops it. In variety of detail and precision of outline it seems to be separated by long periods of development from the vague beliefs and rude ceremonies which characterize the religions of primitive man. But, while it is certain that the Greek gods, as they appear in literature, are the product of a long course of evolution, beliefs in the existence of various supernatural beings, which belong to an earlier stratum of religious thought, and can be paralleled from the records now available of savage superstitions, continued to maintain themselves during historical times. Of these intermediate beings the most important are those known as demons.

1. In early times.—In early religion the most powerful forces are those which are comprehensively attributed to Animism. To these belong the notions that all natural objects are informed with a living principle akin to the human soul, and that the souls of the dead continue to visit the haunts with which they were familiar in life. To the operation of these spiritual powers are ascribed such of the vicissitudes of life as cannot be explained by visible agencies. Similarly, it is inferred that the soul of a living man may be temporarily detached from its normal habitation in the body, as in sleep or trance; and that the bodies of the living may be possessed by alien spirits, as in epilepsy, lunacy, or hysteria. There is plenty of evidence that beliefs of this kind flourished in ancient Greece as vigorously as they have survived in mediæval and modern times; and the general name of 'demons,' which the Greeks gave to certain of these invisible but potent spirits, has been adopted by modern writers, who employ the term 'demonology' to describe the science relating to supernatural beings with a nature intermediate between that of gods and men.

But, in the exposition of these beliefs, we are met with difficulties arising from the nature of the evidence. We cannot reach the crude fancies of the vulgar in their original form, but are obliged to view them through the transfiguring medium of literature. The rationalizing genius of the race stands in our way. The notices relating to demons are drawn, for the most part, either from the writings of philosophers, who endeavoured to harmonize current superstitions with their own interpretation of the universe; or from poetry, where the creative imagination insensibly tones the simple outlines of the popular conception.

The earliest text requiring notice is the passage of Hesiod (*Op.* 122 ff., 251 ff.) in which he identifies the demons with the souls of those who lived in the Golden Age. They are described as continuing in the upper world, kindly guardians of men, distributors of prosperity and wealth, but wrapped in darkness so as to be invisible while they wander over every region of the earth. Here we meet the statement that the demons are the souls of the dead, overlaid with the legend of the Four Ages and the deterioration of mankind. For the popular belief on which it rests we must refer to passages

where the Greek *δαίμονες* is employed, like the Latin *manes*, to denote the spirits of the departed (Lucian, *de Luctu*, 24; for the evidence of inscriptions, where *θεοὶς δαίμονες* = *dis manibus*, see Roscher, i. 929; Frazer, *Pausan.*, 1900, iv. 24). The literary evidence is hardly less conclusive, when we find Darius and Alcestis described as demons in reference to their condition after death (*Æsch. Pers.* 623; *Eur. Alc.* 1003), and when the Muse prophesies that Rhesus, though dead, shall rest hidden in a Thracian cave as a man-demon (*ἀνθρωποδαίμων*, *Eur. Rhes.* 971). See, further, Usener, *Götternamen*, p. 248 ff.; a somewhat different view is taken by Rohde, *Psyche*, i. 95, 153. As the shades of ancestors, so long as they are treated with due respect, are expected to show favour, a reference to the 'good demon' sometimes implies nothing more than this (Waser, in *Pauly-Wissowa*, iv. 2012). But the good demon also appears in circumstances which cannot be associated with ancestor-worship. In Boeotia a sacrifice to the good demon was made the occasion for first tasting the new must (*Plut. Qu. Conv.* iii. 7. 1, p. 655 E); and at Athens it was the custom after dinner to pour out a small libation of unmixed wine in his honour (*Aristoph. Eq.* 85, etc.). At other times he is the personification of good fortune, as the protecting spirit of a community, a family, or an individual; in this sense, Nero arrogated to himself the title of 'good demon of the world' (*CIG* iii. 4699). See Rohde, i. 254 f.

With the various manifestations of the good demon we may contrast cases where the influence of the spirit was pernicious. An evil spirit was often conceived as a ghost.

A good illustration is afforded by the story of Euthymus the boxer, who fought with a 'hero' enshrined at Temesa in S. Italy. This was the ghost of one of Odysseus' crew, Polites or Alybas, who had been stoned to death by the people of Temesa for ravishing a girl. Every year the ghost required the dedication to him of the fairest maiden in Temesa as his wife, which was yielded by the townsfolk in order to save themselves from his wrath. The practice was of immemorial antiquity at the time when Euthymus chanced to come to Temesa, and, having entered the temple, saw the maiden, and fell in love with her. So Euthymus put on his armour, and, when the ghost appeared, withstood his assault and vanquished him; and the hero, driven from the land, plunged into the sea, and was never seen again. Pausanias, who tells the story (vi. 8. 7-11), as well as other authorities (Strabo, p. 255; *Suid. s.v. Εὐθύμης*), had seen a picture illustrating the event which he records, and, in the course of describing it, he quaintly remarks: 'The ghost was of a horrid black colour, and his whole appearance was most dreadful, and he wore a wolfskin.' The ghost-idea is less prominent in the story of the demon of Anagyrus, one of the Athenian demes, who destroyed the family of a neighbouring peasant for a trespass committed on his sanctuary (*Suid. s.v. Ἀναγυράσιος δαίμων*).

Hesiod (*Op.* 159, 172) distinguished between 'heroes' and 'demons,' and later philosophical speculation treated demons as belonging to a higher grade of dignity (*Plut. de Def. Or.* 10, p. 415 B). But in stories like the above the two terms are used without distinction; and heroes as ghostly beings were considered so dangerous that persons passing by their shrines were warned to keep silence, lest they should suffer injury (*Hesych. s.v. κρηττονας*). The belief that a hero is incapable of conferring blessings, and is only powerful to work ill, is enforced by Babrius, *Fab.* 63.

Other evil demons are represented as specially attached to an individual. Thus, the dread and strange vision of monstrous and fearful shape which appeared to M. Brutus in his last campaign announced itself to him as his evil demon (*Plut. Brut.* 36). Or an avenging demon may be the instrument appointed to punish the crimes of a particular family, as when, in the *Agamemnon* of *Æschylus* (1477), after the murder of her husband, Clytemnestra boasts that she herself is the incarnate demon of the Pelopids, 'so gross with overgrown flesh.' In such capacity the evil demon

often bore the special title of 'Alastor'; and in the *Persæ* (357) the slave Sicinnus, who entrapped Xerxes into a fatal manœuvre, so that he lost the battle of Salamis, is described by the Persian messenger to Atossa as having been inspired by an *alastor*. Sophocles, in referring to an action impossible for any one but a madman, does not hesitate to say: 'Who would choose this, unless maddened by avenging fiends?' (*ὅστις μὴ 'ἔ' ἀλαστώρων νοσῶι* [*Trach.* 1235]). It would be easy to multiply instances where demonic agencies are made responsible for good or evil fortune; and it is not surprising that the prevalence of such opinions opened the door to chicanery and imposture. Among the crowds of oracle-mongers, diviners, and interpreters of dreams, who swarmed at Athens during the latter part of the 5th cent. B.C., were some who professed to foretell the future by the agency of familiar spirits obedient to their summons. A notorious instance was Eurycles the ventriloquist (*ἐργαστήριμνος, στερεόφωνος*), who, by giving utterance to his oracles in a feigned voice, persuaded his hearers that they were the pronouncements of a demon lodged within his own breast (*Aristoph. Vesp.* 1019; *Plat. Soph.* 252 C and the scholl.). This proceeding corresponds exactly with the methods of savage magicians, as reported by E. B. Tylor in his article on 'Demonology' (*EBR* vii. 63).

The notion of a guardian spirit, which watches over a man from his birth, directs his actions, and may be either friendly or hostile, was widely entertained among the Greeks. It is best expressed in the famous fragment of Menander (550 K.): 'By every man at birth a good demon takes his stand, to initiate him in the mysteries of life.' This is not a literary fancy, but a popular opinion: 'There are many who have a craven soul, but a good demon,' says Theognis (161). Or we may appeal to Pindar, a witness of a very different type (*Pyth.* v. 122): 'The mighty purpose of Zeus directs the demon of those whom he loves' (see W. Headlam, in *JPh* xxx. [1906] 304; Rohde, ii. 316; Usener, 296). But, in regard to the force of particular passages, there is room for disagreement. The word *δαίμων* is used in such a way that it is often difficult to seize its exact significance in a particular context. Thus, besides bearing the special meaning with which we are now concerned, it may be employed either (1) as a synonym of *θεός*, distinguishable, if at all, as expressing the Divine power manifested in action rather than the Divine personality as an object of worship; or (2) in the abstract sense of *destiny*. Yet, although we may sometimes hesitate (as, e.g., in *Eur. Ion*, 1374, *Supp.* 592) between the abstract and the concrete meaning, with a view to the selection of an English equivalent, it is unlikely that to a Greek the word ever became so colourless as the tr. 'fate' or 'destiny' suggests. That this was the original sense, as has been suggested in recent times (Gruppe, *Gr. Mythol.* 991, n. 4; see, however, Usener, 292), is hardly credible.

We have seen that the belief in the separate existence of the soul after death leads to the assumptions that the souls of the dead are powerful over the living, and that other potencies of a similar character, spirit-like but not souls, exist independently and visit the earth. A further step is taken when these demons are regarded as capable of entering into and possessing human bodies (Gomperz, *Greek Thinkers* [Eng. tr. 1901], ch. i. §§ 5, 6). This may be illustrated by the various instances in which the human representative is permanently or temporarily identified with the Divine being whose power he assumes. Hermes became incarnate in the ministrants at the oracle of Trophonius at Lebadea (*Pausan.* ix. 39. 7), Bacchus in the *mystæ* (schol.

on Aristoph. *Eg.* 408). Similar is the inspiration drawn from the chewing or eating of magic substances, such as the laurel leaves sacred to Apollo (Soph. frag. 811, etc.), or the honey which inspired the Thrice on Parnassus (Hom. *h. Herm.* 560). These are special applications of the general belief in demonic possession, which is implicit in the use of the adjectives *εὐδαίμων*, *κακοδαίμων*, etc., and is expressed by that of the verbs *κακοδαίμονῶν*, *δαίμονι-ζεσθαι* (Soph. frag. 173), and *δαίμονῶν* (Eur. *Phoen.* 888, with the present writer's note). The demon which took possession of a man's body was sometimes conceived as a fiery spirit, which raised the blood to a condition of fever. Hence the fiery emblems of love (Gruppe, 849, n. 7), which permeates the frames of its victims with a feverish ecstasy. Hippocrates found it necessary to combat the superstition that epilepsy is due to some god—Poseidon, Apollo, Ares, or Hecate—having taken possession of the sick man (*Morb. sacr.* 592 K). Phædra's wasting sickness is attributed by the chorus in the *Hippolytus* of Euripides to possession by Pan, Hecate, the Corybantes, Cybele, or Dictynna (141-147); and the sudden illness of Glaucus, described in the *Medea*, was thought by those present to have been caused by the anger of Pan (1172). See also Usener, 294.

2. In the classical age.—The Olympian religion, if we may call by this name the impression which we receive from Greek literature about the ordinary beliefs of the classical age, is a composite structure, largely built up by the transference from past generations of elements on which time has worked an essential change. The demons passed into gods; the shadowy gods became definitely conceived personalities. A good illustration of this process may be taken from the development which can be traced in the notions entertained of the Nymphs (Gomperz, i. 26). The Oreads, Dryads, and Naiads owe their origin to the fetishism which believes that every natural object is endowed with a living spirit. In course of time the spirit is separated from its environment: the Dryad, for example, inhabits the oak, but the oak itself is no longer animate. But the indwelling spirit has not yet become immortal; the Dryad cannot outlive the oak (Hom. *h. Aphrod.* 257; Apoll. Rhod. ii. 481). A later stage has been reached when Homer describes how the Rivers and Nymphs were summoned by Zeus to join the conclave of the immortals (*Il.* xx. 7 ff.). We need not pause to illustrate the process by which a tribal deity has been elevated to national dignity, or a god with limited powers has merged his identity in the attributes of an Olympian. Other demons have taken subaltern rank in the celestial hierarchy, as when the Corybantes are classed as the attendants (*πρόβολοι*) of Rhea (Strabo, 472), and the Satyri attach themselves to Dionysus. *Eurynomus*, a grisly demon who ate the flesh of corpses, was painted by Polygnotus among the inhabitants of the lower world; he was blue-black in colour like a carrion-fly, his teeth were bared, and he was sitting on the skin of a vulture (Pausan. x. 28. 7). Dionysus was sometimes attended by *Akratos*, the potent spirit of the unmixed wine (Pausan. i. 2. 5); and Aphrodite by *Tychon*, perhaps the spirit of good luck, not unlike our Puck or Robin Goodfellow (Gruppe, 853, n. 2). Even the hell-hounds of Hecate are recognized as evil demons (Euseb. *Præp. Evang.* iv. 23. 7, 8).

It has recently been contended (Farnell, *CGS* v. [1909] 444) that the personification of abstract ideas as Divine beings claiming our veneration and worship is to be explained as due to the demonic power which was attributed by a primitive habit of mind to any outbreak of excessive emotion. Typical cases are quoted from the ceremonial observances paid in various parts of Greece to Shame, Pity, Laughter, Fear (Pausan. i. 17. 1; Plut. *Cleomen.* 9). If the suggestion is correct, it throws a remarkable light upon the development of Greek psychology. It is

easier to recognize primitive ideas in the deification of Madness (Pausan. viii. 34. 1) and Hunger (Plut. *Qu. Conv.* vi. 8. 1, p. 694 A). The Mania are supposed by Pausanias to be the Erinyes under another title, as producing frenzy in their victims. But Hunger is hardly to be explained as the concrete embodiment given to the sufferings of starvation. Rather we should infer that the failure of the crops through drought, and the wasting of the flocks and herds through disease, were taken as irrefragable testimony to the operation of a malignant and supernatural power. In order to avert such a calamity, an annual expulsion of a disease-laden scapegoat in the character of a slave, who was beaten with rods of willow to the words of the refrain, 'Out of doors with famine, and in-doors with plenty and health' took place at the town of Chæroneia in Boeotia. Plutarch, in the passage quoted above, tells us that he had himself performed the ceremony when holding the office of chief magistrate. For its significance, see Frazer, *GB²*, 1900, iii. 124ff.

Again, as the crude fancies of primitive superstition ceased to correspond with advancing enlightenment, they tended to gather round them the details of legendary adventures, and to become associated, in the record of a mythical past, with particular localities or heroic names. The Sphinx, a ravening monster, compact of indigenous stories of a destructive dragon fused with Oriental or Egyptian elements, was localized in Boeotia and connected with the story of Œdipus. The Harpies or 'Snatchers' (Hom. *Od.* xiv. 371), another composite notion in the evolution of which wind-demons and death-angels had taken part, survived ultimately for their share in the punishment of Phineus, which was related as an incident in the voyage of the Argonauts. They are nearly related to the Erinyes and the Sirens—both chthonic agencies; but, whereas the belief in an avenging spirit punishing homicide survived longer, and has preserved the Erinyes in literature as a potent spiritual force, the Sirens soon passed into the region of fairy-land, and were remembered chiefly from Homer's description of them in the *Odyssey*. The Gorgons—also under-world powers and storm-spirits—are hardly known to tradition except through the adventures of Perseus.

Besides these, there was a whole host of sprites, bogeys, and hobgoblins which remained nearer to their primitive associations. Their names are generic rather than personal, and they were rarely dignified by a connexion with some heroic tale. Such was *Empusa*, a demonic apparition that appeared sometimes at mid-day and sometimes by night. She had the power of continually changing her shape, but could be detected, it would seem, by the donkey's leg which was her constant attribute (see Dem. xviii. 130; Aristoph. *Ran.* 289 ff.). *Gello*—a name which has been compared with the Arabic *ghoul*—was a spectre which kidnapped children. Almost unknown to literature, the name lasted through the Middle Ages, and survives in some localities down to the present day (Maas, in Pauly-Wissowa, vii. 1005). Somewhat more familiar to us is *Mormo*, a bogey of the nursery, invoked to frighten children (Theocr. xv. 40; Xen. *Hell.* iv. 4. 17)—perhaps a hypocoristic form of *Mormolyke*—a werewolf (*μορμολύκεια*, Plat. *Phædo*, 77 E, etc.). Another bogey-name is that of *Lamia*, who was said to have the remarkable power of taking out her eyes and putting them back at pleasure. She also was a kidnapper and murderess of children, and is sometimes identified with *Mormo* and *Gello*, as if these were different names of the same monster. But in *Lamia* there are more traces of a definite personality; and she has almost become a mythical heroine, as a Libyan queen beloved by Zeus, whose children were killed by Hera, and who in consequence revenged herself by killing other children (see Didymus *ap. schol.* Aristoph. *Pax*, 758). To the same class belonged *Acco* and *Alphito*—words of doubtful meaning which perhaps signify 'booby' and 'grey-head' (Chrysipp. *ap. Plut. de Stoic. rep.* 15, p. 1040 B). *Ephialtes* was the name given to the spectre in-

vented by the ignorant to account for the nightmare which results from indigestion; and he is not always distinguished from *Epiales*, the cold shivering-fit which preceded an attack of fever (Aristoph. *Vesp.* 1037). Ephialtes was sometimes figured as the long-eared owl (*ōros*). Owls (*σφίγγες*) were regarded as birds of evil omen (*Poetæ Lyrici Græci*⁴, ed. Bergk, Leipzig, 1878-82, iii. 664), and as embodiments of the spirits of the dead which appear by night to suck the blood of the living—a superstition which survives in modern Greece.

For the conception denoted by *Keres*, which is closely allied to, and largely co-extensive with, the present subject, see the article under that title.

3. In the hands of the philosophers.—We have now to examine how the popular belief in demons was treated by the philosophical schools. Thales is credibly reported to have said (Arist. *de Anima*, i. 5. 411a 8) that all things are full of gods, and it is hardly to be doubted that in so maintaining he sought to explain Animistic beliefs by the application of rational principles. By the Pythagoreans a belief in demons was always fostered, especially in their character as representing the souls of the dead. They entertained no doubt that such demons were visible as if in actual bodily presence, and were surprised that any one should deny that he had ever seen a demon (Arist. frag. 193 [Rose]). All the air, they said, is full of souls, and these are called demons and heroes. It is they who send dreams and signs of disease and good health not only to men, but also to sheep and cattle. With them relations are established by purification and expiation, by divination and by omens (Diog. Laert. viii. 22). Hence Aristoxenus (Stob. *Flor.* 79. 45) is following Pythagoras when he recommends the worship of gods and demons, and the Golden Poem places the heroes and subterranean demons, i.e. the souls of the dead, after the gods, but as worthy of honour corresponding to their degree. Later doxographers (Aët. *Plac.* i. 8. 2) join Pythagoras with Thales, Plato, and the Stoics in holding that demons and heroes are spiritual substances, or souls separated from bodies, and that there are good and bad demons corresponding to the same varieties of soul. There is also attributed to Pythagoras the fantastic notion that the sound emitted from a brass gong when struck is the voice of a demon shut up within the metal (Porphyr. *Vit. Pyth.* 41). The popular idea of an indwelling demon, by which a man is possessed or controlled, was refined and interpreted by several philosophers. To Heraclitus (frag. 119 [Diels]) is ascribed the pregnant saying that 'character is each man's demon,' his inner self is his true divinity, and his fate is moulded by his own individuality. The same thought is expressed by Epicharmus in a simpler form: 'His disposition is to each man a good or bad demon' (frag. 258 [Kaibel]). Similar but less striking is the saying of Democritus that 'blessedness dwells not in herds or gold, but the soul is the dwelling-place of the blessed being' (frag. 171 [Diels]). Democritus (Sext. *adv. Math.* ix. 19) explained the belief in gods by degrading them to the level of demons, which he held to be material images perceptible to our senses, long-lived but not immortal. Empedocles speaks of the wanderings of wicked demons, which have been cast out of the abodes of the blest but return there after a banishment of 30,000 years, during which they pass through various stages of incarnation (frag. 115, 2). These *δαίμονες*, as Hippolytus explains, are human souls; but they are not necessarily separable entities, since the figurative language of the poem requires to be controlled by the materialism of the philosophical system which it expounds (see Burnet,

Early Greek Philosophy, 1892, p. 271; Rohde, ii. 178 ff.).

Socrates was in the habit of asserting that he was frequently impeded by a Divine sign from taking a particular course of action. This customary sign was imparted through the medium of a warning voice, and was manifested on trifling as well as on important occasions (Plat. *Apol.* 31 D, 40 A). The deduction that Socrates intended to imply that he was guided throughout his life by a familiar spirit, though at one time generally held, has in recent years fallen into disfavour (see Zeller, *Socrates* [Eng. tr. 1868], p. 82 ff.; H. Jackson, in *JPh* v. [1873] 232 ff.). But, whatever may have been the real intention of Socrates, it can hardly be denied that, in a society where the belief in the existence of demons was widely prevalent, to many of his hearers the Divine sign must have suggested such an agency.

Plato, in this sphere as elsewhere, has gathered up the threads of previous speculations and woven them into new combinations by the play of his philosophic fancy. In accordance with popular tradition, he says that the demons are the bastard sons of gods by nymphs or some other mothers (*Apol.* 27 D). The demons are of an airy substance, inferior to the heavenly ether, and serve as interpreters between gods and men (*Epinom.* 984 E). Love is a great demon; like all spirits, he is intermediate between the Divine and the mortal; he conveys to the gods the prayers and sacrifices of men, and to men the commands and replies of the gods (*Symp.* 202 E). This recalls the Pythagorean doctrine previously quoted, and Proclus says it is also Orphic; modern critics have seen in it a mode of reconciliation between the old theology and the new conception of an inaccessible god (Gruppe, 1054). Plato accepts the popular view of demons, as identical with the souls of the dead: when a good man dies, he is honoured by being enrolled as a demon, which is only another form of *δαίμων*, 'the wise one' (*Cratyl.* 398 B). Every man has a distinct demon which attends him during life and after death (*Phædo*, 107 D, *Rep.* 617 D). Each demon has his own allotted sphere of operation, and watches over his appointed charge like a shepherd over his flock (*Polit.* 271 D, 272 E). The last-quoted passages are drawn from the narratives of the myths with which Plato diversified his more formal arguments, and his true mind is to be sought rather in a passage of the *Timæus* (90 A) in which, with a reminiscence of Heraclitus, he declares that God has given to each man, as a guiding genius, the supreme form of soul within us, the rational faculty which dwells in the summit of our body and lifts us towards our celestial kindred.

Aristotle is reported to have assented to the belief that all men have demons which accompany them during the whole period of their mortal existence (frag. 193 [Rose]); but it is impossible to say whether he attached to it any philosophical importance. Xenocrates agreed with the statement in the *Timæus*, that the soul of man is his guardian spirit (Arist. *Top.* ii. 6. 112a, 37); and he also maintained the existence of a number of good and bad demons (Zeller, *Plato*, etc. [Eng. tr. 1876], p. 593). But the school which did most to establish a belief in demons as a part of the mental equipment of its students was unquestionably the Stoic. The Stoics sought with unwearied industry to bring every conception of popular religion into connexion with their own theology; and their doctrine of pantheism enabled them without difficulty to find a place for the demons within their system. They were firmly convinced of the existence of demons, which, having like passions with men, and responding to their desires and fears,

their pains and pleasures, superintended and directed their fortunes (Diog. Laert. vii. 151). These demons are composed of soul-substance, which is not scattered and lost, as Epicurus maintained (frags. 336, 337 [Usener]), at the dissolution of the body, but, having in itself the principle of permanence, is located in the region beneath the moon, and sustained, like the other stars, by the exhalations rising from the earth (Sext. *adv. Math.* ix. 71). Posidonius, who gave particular attention to the matter, explained that human souls after death are not sufficiently pure to reach the upper ether, and are restricted to the lower level, where they congregate among the demons. Hence it is that, with the strictest accuracy, the soul dwelling within the body may be described as the 'demon born with us' (Schmekel, *Philos. d. mittl. Stoa*, Berlin, 1892, p. 256). On the other hand, the Epicureans controverted these fairy-tales: there are no such beings as demons; and, even if there were, it is inconceivable that they would assume human shape, or that it would be possible for them to communicate with us by speech or otherwise (Plut. *Brut.* 37; see, further, Epicur. frags. 393, 394 [Usener]).

In writers of a later period, such as Maximus Tyrius, Apuleius, and Philostratus, the maxims of demonology have come to be commonplaces, partly owing to the influence of the sources which we have enumerated, and partly by the contact with Oriental civilizations, which had become continually more intimate since the beginning of the Hellenistic epoch (Rohde, ii. 364; Gruppe, 1468). Since the demons were regarded as unceasingly active in the service of the gods, they were assigned a definite place in the celestial hierarchy of the Neo-Platonists, as subordinate to angels and archangels (Porphyry, *Ep. ad Arnob.* 10; demons were first associated with ἀγγελοι by Philo, according to Dieterich, *Nekyia*, 61). Hence, as part of the machinery by which the apologists of paganism sought to shore up their tottering edifice against the assaults of the Christians, they appear with considerable frequency in the controversial writings of the early Fathers of the Church.

It is not within the scope of this article to examine the various methods employed by Greek magic for the purpose of averting, deceiving, or conciliating evil spirits. The details will be found elsewhere under the titles CHARMS AND AMULETS, MAGIC, etc. It is only within recent years that the comparative study of anthropology has shown the way by which the future investigation of Greek religion must travel. But the evidence of ritual drawn from literary sources is difficult to appraise; partly because the development of theology tended to obscure the primitive elements, and partly because the ritual facts, even when separated from later accretions, are capable of various interpretations. It is well established that the beating of drums and cymbals, and particularly of various kinds of bronze vessels (schol. *ad Theoc.* ii. 36), was intended to frighten away any demons which might be at hand on important or ceremonial occasions; similarly, the use of iron was effective against demonic influence (Riess, in Pauly-Wissowa, i. 50). When, however, the desire to be on good terms with evil demons is held to be the leading motive in such various rites as sword-dances, the ploughing with magic animals, the smearing of the face with chalk or meal, or the dressing of a boy in girl's clothes (cf. *CLR* vii. [1893] 243), it must be remembered that such hypotheses are far removed from certainty. The debatable evidence will be found collected in Gruppe, 894 ff.

For demons in relation to the Orphic cults, see ORPHISM.

LITERATURE.—The main facts are summarized in the articles, s.v. 'Daimon,' by von Sybel, in Roscher, i. 938, and by Waser, in Pauly-Wissowa, iv. 2010, where references are given to the less accessible of the special treatises. See also R. Heinze, *Xenocrates*, Leipzig, 1892, pp. 78-123; J. Tambornino, *de Antiquorum Dæmonismo*, Giessen, 1900. Much useful information will be found in O. Gruppe, *Gr. Mythol. und Religionsgesch.*, Munich, 1906; J. E. Harrison, *Proleg. to the Study of Gr. Religion*², Cambridge, 1909; A. Dieterich, *Nekyia*, Leipzig, 1893, esp. pp. 46-62; H. Usener, *Götternamen*, Bonn, 1896, esp. p. 292 ff.; E. Rohde, *Psyche*¹, Tübingen, 1907.

A. C. PEARSON.

DEMONS AND SPIRITS (Hebrew).—It will be most convenient to divide the material into three periods: pre-exilic, exilic and post-exilic, and Apocryphal.

1. **THE PRE-EXILIC PERIOD.**—1. In the early Heb. poems there is but one allusion to an angel, and none to spirits or demons. The 'holy ones' in Dt 33², later supposed to be angels (cf. Ac 7³, Gal 3¹⁹, He 2²), were probably not a part of the original text (cf. Driver, *Deuteronomy*, Edinburgh, 1895, p. 392 ff.). In Jg 5²³ we read: 'Curse ye Meroz, saith the angel of Jahweh.' Probably the angel was a manifestation of Jahweh, as in the J document.

2. Our next earliest evidence is in the J document. In Gn 3²⁴ cherubim are said to have been the guardians of Eden's entrance. There is reason to believe that these beings were personified winds. They find a counterpart in the winged figures of the Assyrian sculptures, which are often pictured in the act of fertilizing the sacred palm tree; hence Tylor suggested that they were winds—a view now accepted by many others.¹ The association of such figures with the tree of life would lead to the view that they were denizens of Paradise, and hence guardians of the tree of life. Apart from the cherubim, no other spirits appear in the early chapters of Genesis, but Jahweh Himself deals directly with men. This is the case in the Eden narrative (Gn 3), the Flood story (chs. 6-9), the confusion of tongues (ch. 11), and the story of Abraham (ch. 15). In the last-mentioned passage Jahweh appears as a flame of fire.

In Gn 16⁷ we first come upon the 'angel of Jahweh,' who found Hagar in the wilderness and aided her, but whom, as v.¹³ shows, Hagar regarded as Jahweh Himself. The word here and elsewhere in the OT translated 'angel,' *mal'ak*, is from a root which appears in Arabic as *laka*, and in Ethiopic as *la'aka*, 'to go' or 'send as a messenger.' In this case *mal'ak Jahweh* means a special mission or coming of Jahweh to accomplish a special purpose. The 'angel' is not, accordingly, an angel in the later acceptance of the term.² The same is true of the following instances, which all appear in J, or in literature closely akin to it.

In Gn 18 the word 'angel' is not used, but Jahweh is said to have visited Abraham. The 'two angels' of ch. 19 are a later addition to the narrative, and, in the language of a later epoch, describe Jahweh's companions. In Gn 32²⁴ a 'man' comes and wrestles with Jacob; he is in reality Jahweh, though not formally declared by the text to be so. This 'man' represents a 'mission' or 'coming' of Jahweh, as did the 'angel of Jahweh' in ch. 16. It is probably this 'man' who is referred to in Gn 48¹⁶ as 'the angel which hath redeemed me [Jacob].' In Ex 3² the 'angel of Jahweh' appeared to Moses in the burning bush, but it was Jahweh Himself who saw that Moses turned aside to see the bush (v. 4), and Jahweh who spoke to Moses (v. 7). Similarly, the 'angel of Jahweh' appeared in the way to stop Balaam (Nu 22²³⁻³⁵). In Jos 5¹³⁻¹⁵ a 'man' appeared to Joshua as the captain of the host of Jahweh; he was the same manifestation elsewhere called the 'angel of Jahweh.' In Jg 2¹ the 'angel' or 'manifestation' of Jahweh moved up from Gilgal to Bethel. The 'angel of Jahweh' appeared to Gideon (Jg 6¹¹), and it is clear from vv. 21-23 that He was Jahweh Himself. The same is true of the 'angel of Jahweh' who appeared to the wife of Manoah in Jg 13²⁷. In 2 S 24¹⁴ David falls into the hand of Jahweh, who turns out (v. 16) to be His angel.

In all these passages the 'angel of Jahweh' is

¹ Cf. Barton, *Sem. Or.*, London, 1902, p. 91, and the references there given; also Skinner, *Genesis*, Edinburgh, 1910, p. 59 ff.; for a divergent view, see art. *CHERUB*, vol. iii. p. 608 ff.

² Cf. W. E. Addis, *Documents of the Hezateuch*, London, 1892, i. 24, n. 1.

Jahweh Himself, who has come upon some special mission. Perhaps it was regarded as a kind of partial manifestation of Jahweh, but at all events there was no clear line of distinction between Jahweh and His angel. These manifestations of Jahweh were regarded as blessed or beautiful things, so that, when it was desired especially to praise a man, one said to him: 'Thou art good in my sight as an angel of God' (cf. 1 S 29³, 2 S 14^{17, 20} 19²⁷). At the same time, the term *mal'ak* was often used to designate the messenger of a king (see 1 S 11⁸ 16¹⁹ 19^{11, 14, 20}, and cf. 1 K 20³, Jer 27⁹).

In the J document other beings of the Divine order besides Jahweh are represented as real. These are called 'sons of God' (*b'ne ha-'elohim*) in Gn 6^{2, 4}, where they are said to have taken human wives and to have begotten the heroes who lived in olden days. These beings are not called angels, and do not appear again in pre-exilic literature.

3. In the E document the same conditions of thought prevail, though here angels appear at times in numbers.

In Gn 22¹¹ an angel called to Abraham out of heaven to prevent the sacrifice of Isaac. The present text calls him the 'angel of Jahweh,' but it is thought that in the original form of the text he was called the 'angel of God.' In Gn 23¹² Jacob saw the angels of God ascending and descending upon the ladder of his dream, but they were so closely associated with God that he said: 'This is none other than the house of God.' In Gn 31¹¹ the 'angel of God' appeared to Jacob in Aram, but v. 13 tells us that he said: 'I am the God of Bethel.' The angel was, then, only a manifestation of God. In Gn 32¹⁰ 'the angels of God' met Jacob, and he said: 'This is God's host.' Here apparently the angels were a manifestation of God and of His attendant company of spirits. In Ex 34¹ it was God Himself who called to Moses out of the burning bush. In Ex 14¹⁹ the 'angel of God' who had gone before the camp of Israel removed and went behind. This angel performed the same function as the pillar of cloud in the J document (cf. Nu 20¹⁶). That the 'angel of God' was practically identical with God is shown in Ex 23^{20, 21}, where God declared that His 'name' was in the angel that should go before Israel.

There is, then, no radical difference of conception between J and E. In both of them the angel of the Deity is usually a manifestation of Deity Himself, though in one instance (Gn 32¹⁰) the angels are apparently the spirits who accompany God. In Jg 9²³ (a passage which G. F. Moore [SBOT, New York, 1898] attributes to E), God is said to have sent an evil spirit between Abimelech and the men of Shechem; and similarly in 1 S 16^{14-16, 23} 13¹⁰ (a passage which Budde attributes to J) an evil spirit from God is said to have come upon Saul.

4. This last conception is similar to that in 1 K 22¹⁹⁻²³, where Jahweh is thought of as surrounded by a host of spirits. These spirits were as yet undifferentiated. They had no moral character; they were neither angels nor demons, but took on their character from the nature of the tasks which they were given to perform. Jahweh Himself was responsible for whatever was done; He lured Ahab to his death; it was at His bidding that one of the spirits became a lying spirit in the mouths of Ahab's prophets to accomplish this end. The spirits of Jahweh's court were not the only spirits in which the Hebrews of the period believed. In 2 K 2¹² and 6¹⁷ reference is made to a kind of horsemen of the air, who seem to have been regarded as spirit defenders of Israel, for one passage relates that, when the chariot of fire took Elijah away, Elisha exclaimed: 'The chariots of Israel and the horsemen thereof!' and the other represents these horsemen as the defenders of Elisha from a foreign army.

5. There are few other references to angels or spirits before the Exile. An early Ephraimite narrative (1 K 19⁵) tells us that an angel touched Elijah and awakened him. One late prophetic narrative tells us twice that an angel of Jahweh spoke to Elijah (2 K 1^{3, 15}), while another, also late (1 K 13¹⁸), tells that an angel spoke to another prophet. In 2 K 19³⁵=Is 37³⁶ we are told

that an angel of Jahweh smote the Assyrians of Sennacherib's army. Pre-exilic prophets make almost no reference to angels, although Hosea (12⁴) declares that Jacob 'had power over the angel.' This is a reference to the 'man' of Gn 32²⁴, and is the only occurrence of 'angel' in a pre-exilic prophet. The Deuteronomist makes no mention of angels. One Deut. editor refers to the 'angel of Jahweh' (Ex 33²), but he was influenced by E.

6. One other class of supernatural beings of the time before the Exile remains to be considered, viz. the seraphim. Our knowledge of them is gained from one passage only, Is 6¹⁻⁷. In his vision, Isaiah saw Jahweh, above whom the seraphim were standing. Each one had six wings, and they constantly uttered the trisagion. At the sound of their voices 'the foundations of the threshold were moved.' Finally, it was one of these who took from the altar a live coal and touched the prophet's lips. It is clear that, like the cherubim, the seraphim were not angels (i.e. messengers), but were attendants of Jahweh. Like the cherubim, they are composite figures, and later Jewish thought placed them with the cherubim in Paradise (cf. En. 61¹⁰ 71⁷, Slav. En. 20¹ 21¹).

Various explanations of the name and nature of the seraphim have been offered. (1) An old explanation, now generally abandoned, derived *serāph* from the Arab. *šarūfa*, 'to be eminent in glory,' and held the seraphim to be a kind of archangels. (2) Delitzsch and Hommel have connected it with the Assy. *šarrāpu*, the 'burner,' an epithet applied to the Bab. god Nergal, a sun-deity; but, although an old syllabary says that this was the epithet of Nergal in the 'Westland,' no such deity has appeared in any real Canaanite source, and is consequently improbable. (3) Cheyne (*EBi*, art. 'Demons') has, under the influence of the previous suggestion, attempted to connect the name of the god *Rešef*, whose name occurs in a Phoen. inscription (*CISL* 1.88). This he equates with *serāph*, supposing that a transposition of letters occurred—a solution which seems even more improbable. (4) Less satisfactory still was Hitzig's suggestion that *serāph* is to be connected with the Egyptian *Serapis*. (5) More recently Marti and others have connected the seraphim with the Egyptian griffins found, for example, in a XIIth dynasty tomb at Beni Hassan. These griffins were winged, were guardians of the grave, and in demotic were called *serēf* (cf. R. Pietschmann, *Gesch. der Phönizier*, Berlin, 1889, p. 177 ff.). (6) Probably the true explanation connects the seraphim with the fiery (*šarāphim*) serpents of Nu 21⁶, and supposes that the seraphim were primarily serpents. This view is supported by the fact that Heb. tradition gave the serpent a prominent rôle in Paradise (cf. Gn 3), that they worshipped a serpent-god down to the time of Hezekiah (2 K 18⁴⁰), that there was at Jerusalem a well called the 'Dragon's fountain' (*Neh* 21³; probably the modern Bir Eyyub), that a brazen serpent was found at Gezer in the pre-exilic Hebrew stratum (R. A. S. Macalister, *Bible Side-Lights from the Mound of Gezer*, London, 1906, p. 76), and that in En. 20⁷ serpents (Gr. *ἐράκοντες*) are associated with the cherubim in Paradise, as in the Enoch passages cited above seraphim are associated with the cherubim. In course of time these serpents of Paradise were regarded as the attendants or guards of Jahweh, and were given wings, etc. to make them composite.

In pre-exilic Hebrew thought, then, Jahweh had three classes of attendants—cherubim, spirits, and seraphim. The cherubim and seraphim were guardians of Paradise and attendants of Jahweh. The spirits were His courtiers, and might be sent on missions by Him. They played, however, a very small part. Jahweh Himself was thought to appear in special manifestations to accomplish His purposes. Such manifestations were called the 'angel of Jahweh,' or the 'angel of God.'

7. Of demons in this period there are but slight traces. In the old poem which now forms Dt 33 it is said in v. 13 that the 'deep' (*t'hōm*) 'coucheth' (*rôbešeth*) beneath. Driver has noted (*Deut.* p. 406) that *rôbešeth* is ordinarily used of an animal; and, when one recalls that under the kindred name *Tiamāt* the deep was personified in Babylonia as a dragon, and that this dragon appears in post-exilic Heb. literature as Rahab and Leviathan (see below), it becomes probable that Dt 33¹³ personified the subterranean abyss as a great dragon or demon. In Dt 32¹⁷ Hebrews are said to have sacrificed to *šēdīm*, not to 'Elah' (God). *Šēdīm* was understood by the translators of the Septuagint as

demons, but, as it is made parallel with 'foreign gods' (cf. v. 18), and is the equivalent of the Assyrian *šēdu*, or bull-deity, it is probable that it is used here as the name of a foreign deity. The fact that the root *šēd* became in later Judaism the general term for 'demon' (cf. Jastrow, *Dict. of the Targ., Talmud, and Mid.*, New York, 1903, p. 1558a) does not prove this inference wrong. If this view is correct, it makes no difference to our subject whether we date Dt 32, with Ewald and Dillmann, in the reign of Jeroboam II.; with Kuenen and Driver, about 630 B.C.; or, with Steuernagel, in the Exile.

There are no clear references in pre-exilic literature to other demons, but it is probable that the Hebrews of the period believed that demons inhabited waste places, and that they endeavoured to propitiate them. The sacrifice to the wilderness demon Azazel (*g.v.*) (Lv 16) is clearly a survival from pre-exilic days, and it is probable that Lilith (Is 34¹⁴) was an old wilderness demon.

II. EXILIC AND POST-EXILIC CANONICAL MATERIAL.—1. In *Ezekiel* the term 'angel' does not occur, though in 9²⁵ and in 40³⁷ a supernatural man appears who performs the functions of an angel. In the former passage he directs the marking of idolaters for destruction; in the latter he measures off the dimensions of the new sanctuary. The older belief in spirits survives to some extent in *Ezekiel*. In 2² 31¹⁴ 8¹⁷ a 'spirit' is said to have come upon *Ezekiel* and filled him with ecstatic inspiration. This spirit was one of the members of Jahweh's court, of which 1 K 22 gives such a vivid description (cf. Toy, *SBOT*, New York, 1899). This usage of 'spirit' is found only in the earlier chapters of *Ezekiel*, and in 8¹⁷ is made synonymous with 'the hand of Jahweh.' In 11⁵ the term 'spirit' occurs, but it here approaches more nearly the spirit of Jahweh, and does not seem to denote a separate entity of a lower order. It inspires the prophet to reflexion rather than ecstasy. In other parts of *Ezekiel* 'spirits' do not occur.

2. In *Deutero-Isaiah* angels are not mentioned, and in *Trito-Isaiah* only one reference to an angel or spirit is found, viz. 'the angel of his [Jahweh's] presence' [Heb. 'face'], Is 63⁹. The expression occurs in a poetic reference to the angel mentioned in Ex 23¹, of whom it was said, 'My name is in him.' The term 'presence' or 'face' seems to be borrowed from Ex 33¹², where Jahweh says to Moses: 'My presence shall go with thee.' The reference in *Isaiah* really betokens a post-exilic literary survival of a pre-exilic idea.

3. In *Zechariah* the 'angel' in the function of messenger appears as a fixed idea. The angel talked with the prophet, and in this way *Zechariah* received all his prophetic messages (cf. Zec 1⁹ 11¹² 12¹⁰ 13⁵ 14¹⁹ 5⁵ 10⁶ 6⁴). The angel is here clearly an intermediary between God and man. *Zechariah* never is said to have seen God. In *Zechariah*, too, we meet for the first time with the division of angels into ranks. In 2³ a one angel is clearly the commander of another, and sends him on a mission. The 'angel of Jahweh' appears here also as a kind of guardian of Israel, since he protects the priest, the representative of the nation. In 1¹⁷ and 4¹⁷ the angel of Jahweh appears as a kind of Grand Vizier among the other angels. Possibly this early differentiation of angels into ranks was due to Persian influence, though this seems improbable, for, when this prophecy was written, only twenty years had elapsed since Cyrus's conquest of Babylonia and Palestine.

4. In the Book of *Job* we have different strata. The prologue is older than the poem, and may have been composed before the Exile. In it Jahweh is represented as surrounded by a court of

supernatural beings. These are called *b'ne hā-'elohim*, or beings of the Divine order—the old name employed in Gn 6²⁻⁴. These beings are pictured as free to walk through the earth wherever they will, but upon appointed days they gather to pay their court to Jahweh. Satan is still a member of this group, though he has become offended and has lost his faith in the existence of disinterested virtue. He is permitted to go forth upon a mission of experimentation—a mission which proves most painful to his victim. The whole conception is quite akin to that of 1 K 22. In the poem, which is later than the prologue, little is said of angels, though that little is of interest. In 5¹ the possibility of angelic intercessors is referred to. The angelic beings are here called 'holy ones.' In 4¹⁸ and 15¹⁶ these 'holy ones' are said to be less pure than God, but much holier than men. The 'angel' of 33²² (RV) is better rendered, with the margin, 'messenger,' since Elihu is referring to himself and not to a heavenly messenger (cf. Barton, *Com. on Job*, N.Y., 1911). In 38⁷ the 'sons of God' of the prologue are referred to, and are identified with the morning stars.

5. In the *Psalter*, angels are messengers of either good or evil. Ps 34⁷ declares: 'The angel of Jahweh encampeth round about them that fear him,' i.e. he is their protection. Ps 35⁶ declares that God lets His angel chase and persecute the wicked. Similarly, Ps 78⁴⁹ declares that God cast upon the Egyptians 'the fierceness of his anger, wrath, indignation, and trouble, a band of evil angels.' Here the angels are personifications of the wrath and indignation of Jahweh. Ps 104⁴ reverses in a way the process, declaring: 'He makes his angels winds.' The angels as guardians are again referred to in Ps 91¹¹: 'He shall give his angels charge over thee, to keep thee. They shall bear thee up in their hands.' Ps 103²⁰ and 148² call upon angels as well as men to praise God. Ps 89⁶ implies that God is surrounded in heaven by a council of angels. This is also implied in Ps 103²⁰ 21 and 148², where the angels are spoken of as the 'ministers who do God's pleasure,' and as 'his host.' In Ps 8², where the present text, in speaking of man, reads: 'Thou hast made him little less than God' (*'elohim*), the reference is probably to angels, and the original text was, perhaps, 'sons of God' (*b'ne hā-'elohim*).

6. The *Priestly document* contains no reference to angels. It conceives of God as far away, but also as so powerful that He can simply speak and His word is obeyed. It represents Him in Leviticus as speaking to Moses, but how He spoke it never tells. It gives no hint that it was through angels.

7. The same is true of the Books of *Chronicles*, which are closely dependent upon P for their point of view. The Chronicler mentions angels in two passages only, 1 Ch 21 and 2 Ch 32²¹. The former passage is dependent on 2 S 24, and has taken over the angel who inflicted the punishment for David's census (see vv. 9 11 12 13 14 15); the latter is dependent upon 2 K 19³⁵, and has taken over the story of the angel who destroyed Sennacherib's army.

8. Angels do not really appear in the Book of *Ecclesiastes*. The word 'angel' is found, it is true, in 5⁶ (Heb. 5⁶), but it is probably a reverent way of referring to God Himself (cf. Barton, *Ecclesiastes*, in ICC, 1908). The Chronicler had set the example for this procedure by making the angel who afflicted Israel stand for God (cf. 1 Ch 21¹⁶ 20).

9. In the Book of *Daniel* the belief in angels re-appears, and they are thought to be exalted far above man (see 8¹⁶⁻¹⁸ 10¹⁶). In 3²⁵ an angel comes in human form to deliver the three children from the fiery furnace (cf. v. 28), and in 6²² God's angel

is said to have stopped the mouths of the lions. The conception of the division of angels into ranks, which was found in Zechariah, re-appears in an accentuated form in Daniel. Each nation apparently has a 'prince' or archangel detailed to look after its interests, so that there is a 'prince of the kingdom of Persia' (10¹²⁻²⁰), a 'prince of Greece' (10²⁰), and a 'prince of Israel' (10²¹). The last mentioned is Michael, who was 'one of the chief princes' (10¹³ 12¹). Possibly this conception is also found in Is 33^{21a}, which dates from about 335-333 B.C. In Daniel, too, we come upon a new feature found in no other canonical book of the period: the angels, or at least the archangels, begin to have names. In addition to Michael, already mentioned, 'the man Gabriel' (Gabriel means 'hero or man of God') appeared to impart wisdom to Daniel (8^{16a} 9^{21a}). The giving of definite proper names to angels—a feature very common in some of the apocryphal books—marks another step forward in the evolution of the conception.

10. Taking the post-exilic time as a whole, some interesting general facts with reference to angels may be gathered. They are called by a variety of names: 'sons of God,' i.e. of 'elôhîm (Job 1⁶ 2¹, Dn 3²⁵); 'elôhîm, i.e. 'gods' (Ps 8⁵ and perhaps 97⁹), 'sons of the mighty,' i.e. of 'êlîm, lit. 'gods' (Ps 29¹ 89⁷); 'êlîm, or 'gods' (Ex 15¹¹); 'gibbôrîm, or 'heroes' (Jl 3 [4]¹¹); 'shômêrîm, or 'keepers' (Is 62⁶); 'host of the height' (Is 24²¹); 'morning stars' (Job 38⁷); 'êrîm, i.e. 'watchers' (Dn 4¹⁷ [14]); 'holy ones' Zec 14⁵, Ps 89⁷), and 'princes' (Dn 10¹³ 20²¹). Although angels are once identified with stars (Job 38⁷), there is no attempt in the canonical books, such as appears in some of the apocryphal books, to define the nature of angels or to tell the substance of which they are composed. The term 'host of the height' applied to them in Is 24²¹ is, no doubt, a modification of the pre-exilic phrase 'host of heaven,' which was applied to the stars. During the last years of the Judæan monarchy those had been worshipped (see Jer 8², Zeph 1⁵, Dt 4¹⁹); they were then considered as gods, and the prophets opposed their worship. As the close of the Exile drew near, Jahweh was declared to be supreme over them (Is 45¹²; cf. 40²⁵), and in Neh 9⁵ they are said to worship Jahweh. Apparently it was believed that this host was not subdued to the position of subordinates and worshippers without a struggle (see Job 25², Is 24²¹ 27¹ 34⁹), and the reference in 27¹ to Leviathan, which, as shown below, is a name for the Bab. dragon Tiamât, suggests that the idea of a struggle was borrowed from the Babylonian Creation Epic.

It has been held by some that the division of angels into ranks and the belief in archangels point to the fact that the angels originated in the subjugation of other gods to Jahweh. The argument in favour of this view is strong. It would seem improbable that the development of archangels was due in the first place to Persian influence, for they appear already in Zechariah, when Persian influence was too new. The fact that in Daniel the different archangels are each the prince or guardian of a special nation is in favour of the origin suggested, for it assigns to them just the rôle that the national gods of the heathen world had performed.

The functions of angels were various. They acted as Jahweh's court (Job 1. 2) and as His council (Ps 89⁷); they might be intercessors for men (Job 5¹), or guardians of the righteous (Ps. 34⁷), whom they bear up in their hands (Ps 91^{11a}, Nu 20¹⁶ [P]); they are the guides and channels of Divine revelation to prophets (Zec 1⁹ 11. 12 13. 14. 19 etc., Dn 8^{16a} 10^{9-11a}); they inflict punishment on the wicked (Ps 78⁴⁹); some of them guard the nations (Dn 10²⁰ 21¹); and in general they do whatever Jahweh wishes to have done.

Angels during this period were for the most part without names. There are only three exceptions

to this: the 'angel of his presence' (Is 63⁹), which, as pointed out above, is a poetic way of referring to a pre-exilic idea; and the individual angels Michael and Gabriel. These last appear in Daniel only, the latest book of the canon to contain any reference to angels. They are canonical examples of a tendency which is abundantly illustrated in the apocryphal literature to individualize angels and to attribute permanent characteristics to them. The name *Michael*, meaning 'Who is like God?', was a natural one to apply to an angel, though it had previously been borne by a number of men (see Nu 13¹³, 1 Ch 5¹³. 14 6⁴⁰ 7³ 8¹⁶ 12²⁰ 27¹⁹, 2 Ch 21¹, and Ezr 8⁹). *Gabriel*, as already noted, signifies 'man of God,' and was also a natural name to give an angel.

11. The Hebrew belief in demons belongs especially to the time after the Exile. There were several causes which led to this belief. In pre-exilic times, it had been thought that Jahweh did everything, both good and bad. Amos says (3⁶). 'Shall evil befall a city and Jahweh hath not done it?' This evil might be accomplished through the agency of non-ethical spirits, as in 1 K 22¹⁹⁻²³, but Jahweh was in reality responsible for it. As in the case of the spirit that visited Saul, it might be called an 'evil spirit' (1 S 16^{14a}); but this only signified that its effects were undesirable, not that the spirit was morally bad. The spirit in this case came from Jahweh, and He was really responsible. This view was entertained by one writer until near the close of the Exile, for Deutero-Isaiah represents Jahweh as saying: 'I make peace, and create evil' (Is 45⁷). In the time after the Exile, men began to feel that to attribute evil to God was to think unworthily of Him; hence the occurrence of evil was ascribed to the agency of demons. This was, however, only one of the forces at work. With the triumph of monotheism the belief in the reality of the heathen deities did not altogether disappear, and those gods whose worshippers had been hostile to Israel, or had opposed the prophets so as to be denounced in the sacred books, were reduced to the rank of demons. From time immemorial, too, the belief had existed that dark and deserted localities were inhabited by unfriendly spirits. From the earliest times, pains had been taken to propitiate some of these by sacrifices, and such unfriendly spirits now became demons in the commonly accepted view. Then, too, the old mythology had preserved the memory of a heavenly court of spirits, or *bênê hā-elôhîm*. It kept alive the memory of how some of these spirits had been commissioned in the olden time to bring men to destruction, and from this circle of ideas there was born a belief in an arch-enemy of good—Satan—who has since held a large place in the world's thought. Some of these demons were believed to inhabit the deserts and to roam about at night (cf. Is 13²¹ 34¹⁴). Like the *jinn* of the Arabs, they were supposed to take on the forms of wild animals. Some of them still maintained the quasi-Divine character which they had possessed before the Exile, and sacrifices were still offered to them. Once it is implied that the home of the arch-demon is in Sheol (cf. Job 18¹⁴).

Of individual demons, the one that played the largest part in later thought is Satan, though he appears in but three passages of the OT. (a) The earliest of these is the prologue of Job, which may be pre-exilic. Here Satan is one of the 'sons of God,' or 'spirits,' who compose the court of Jahweh. Much of the character of the un-ethical spirit which was sent on a mission of evil to men still attaches to him, but he has developed beyond this, for he has become permanently sceptical of disinterested virtue. He can do nothing without

Jahweh's permission, but his state of mind is thought to be a cause of regret to Jahweh. In consequence of Jahweh's concern for Satan and His desire to win him once more to a proper attitude, He permits him to make investigations in disinterested virtue by bringing evil upon Job. In this narrative Jahweh is represented as ultimately responsible for the evil, but it is permitted for a good end—the scattering of the doubts which had invaded the angelic circle and embittered one of the courtiers of heaven.

(b) In Zec 3¹ Satan appears to oppose the high priest Joshua before the 'angel of Jahweh.' The 'Adversary' (for such is the meaning of the name *Satan*) stands in the court of Jahweh as a public prosecutor, and, as Joshua is the representative of the nation, so Satan is the adversary or prosecutor of the nation. The fact that the angel of Jahweh rebukes him shows that Satan has undertaken his evil opposition to the people of God on his own initiative and not by Divine permission, as was the case in the Book of Job. His malignity is accordingly somewhat more developed, and in the circle of ideas represented by this passage Satan really relieves Jahweh of the responsibility for evil.

(c) The only other OT passage where Satan is mentioned is 1 Ch 21¹, which is a further witness to the fact that Satan was now held to be responsible for the existence of evil. The chapter gives an account of David's census and of the punishment for it, and is dependent on 2 S 24; but, whereas it is said in Samuel that Jahweh said to David, 'Go, number Israel,' because He was angry with the people, it is said in Chronicles that Satan 'moved David to number Israel.' Satan is clearly a development out of the group of spirits which were in earlier days thought to form Jahweh's court, members of which were sent upon errands of disaster to men.

Another demon who appears in one post-exilic canonical passage (Lv 16) is Azazel (*q.v.*). In the ritual of the Day of Atonement it is prescribed that a goat shall be chosen 'for Azazel,' that the sins of the people shall be confessed over him, and that then he shall be sent into the wilderness by a special messenger and turned loose (cf. Lv 16^{8, 10, 20}). The goat is in reality a sacrifice to Azazel. The ritual of this chapter is clearly a survival from pre-exilic days. It is also clear that Azazel was a wilderness demon, and probably the sacrifice was originally offered to him to propitiate him. It is, accordingly, a survival from a kind of worship of fear. The name 'Azā'zēl signifies 'entire removal.'

Another class of demons were se'irim, lit. 'hairy ones' (RV 'satyrs'; marg. 'he-goats'), who, like Azazel, were thought to inhabit wastes and ruins. Is 34¹⁴, in a picture of the future desolation of Edom, says that 'satyr shall call to his fellow there'; and Is 13²¹, an exilic passage, in portraying the desolation of Babylon, declares that 'satyrs shall dance there.' Just as the Arabs degraded the gods of the heathen to *jinn* and attributed to them some of the hairy characteristics of animals, so these satyrs appear to have been originally heathen deities (cf. W. R. Smith, *Rel. Sem.* 120 ff.). It is for this reason that Lv 17⁷ prohibits, for the future, sacrifice to satyrs, implying in the statement that they had been the recipients of sacrifices in the past. Similarly 2 Ch 11¹⁵, in reproducing 1 K 12³¹—the statement concerning Jeroboam's arrangements of priests for the high places—amplifies it by saying that he appointed 'priests for the satyrs and calves which he had made.'

The *shedim* which are mentioned in Dt 32¹⁷ are once referred to in a post-exilic canonical writing, Ps 106³⁷, where *shedim* is a synonym for demons.

The word really, as the parallelism shows, refers to the heathen deities of the Canaanites, whom some of the post-exilic writers made satyrs, as just noted. That it was the intention of the Psalmist to call them demons here is confirmed by the fact that in the Mishna and Talmud *shed* is the root used to designate demons in general (cf. Jastrow, *Dict.* p. 1558a).

Is 34¹⁴ mentions Lilith (RV 'night-monster') in connexion with satyrs. It is probable that the name is connected with the Heb. root for 'night,' and that Lilith was a night-monster or demon which was thought to lurk in desolate places.

The 'horse-leech' (*alūqā*) of Pr 30¹⁵ was perhaps a demon. While there was a large leech to which the name was applied, it was also regarded by the Jews of later time as the name of a demon. This seems to be the case in the Targ. to Ps 12⁹, which says: 'The wicked go round in circles like *alūqā*, who suck the blood of men.'

In Ca 2^{7, 3} the Shunammite adjures the daughters of Jerusalem 'by the roes and hinds of the field.' These are here probably not simple animals, but faun-like spirits by whom, as by other supernatural beings, adjurations could be made.

In four passages (all exilic or post-exilic) a great demon or dragon called Rahab appears. She was surrounded by a host of helpers, but after a severe struggle she and her helpers were overcome by Jahweh. The passages are: Is 51⁹ 'Art not thou he who hewed Rahab in pieces, who pierced through the dragon?'; Job 9¹³ 'The helpers of Rahab do stoop under him; how much less shall I answer him?'; Job 26^{12, 13} 'He quelleteth the sea with his power, by his understanding he smiteth through Rahab; by his breath the heavens are bright,' etc.; Ps 89¹⁰ 'Thou hast broken Rahab in pieces as one that is slain; thou hast scattered thine enemies with the arm of thy strength.' It has long been recognized (see the writer's art. 'Tiamat' in *JAOS* xv. [1890]) that Rahab in those passages is simply another name for the Bab. primeval sea-monster Tiamāt. She is, accordingly, here not a native Heb. demon. For the original picture of her and her helpers, see L. W. King, *Seven Tablets of Creation*, London, 1902, Tablets ii. and iv. Although Rahab is not native to Heb. soil, she plays a considerable part in post-exilic thought. Jahweh was naturally substituted for Marduk in the story circulated among the Hebrews, and His worshippers magnified His power as they thought of the might of this terrible dragon of a demon.

In at least two passages this primitive Bab. monster was known among the Hebrews as Leviathan. In Job 3⁸ Leviathan is evidently a mythical dragon capable of darkening the day, while in Ps 74¹⁴ we read, 'Thou brakest the heads of Leviathan in pieces,' and vv. 16, 17 go on to speak of the creation of the sun, the fixing of earth's bounds, and the making of summer and winter. In the psalm, therefore, we clearly have a reference to the Bab. Creation Epic, and it is probable that the passage from Job refers to the same monster. In Job 41 the crocodile is described under the name Leviathan, but in vv. 19-21 the description of the natural animal is mingled with elements drawn from a mythical fire-breathing dragon. It is probable, therefore, that Leviathan, like Rahab, was the Bab. Tiamāt under another name.

III. IN APOCRYPHAL LITERATURE.—While but few individual demons can be traced in the canonical literature, the apocryphal writings bear witness to the fact that the popular thought abounded with them. In the Apocalyptic writings of the Jews, composed prior to A.D. 100, all the main features of belief in spirits, angels, and

demons which appear in the canonical literature were continued and heightened. There is, however, a great difference between them in this respect. Some of them, like Sirach and Maccabees, make almost no reference to angels. Sirach mentions only the angel that destroyed the Assyrian army (48²¹), the writer of 1 Mac mentions angels only in referring to this event (7⁴¹), while the author of 2 Mac refers to them only in saying that the Jews of the Maccabean time prayed that an angel might be sent to smite the Greeks, as one was sent to smite the Assyrians (cf. 11⁶ 15²²). Similarly, the Wisdom of Solomon makes no reference to angels except that in describing the Exodus it declares that the word of God was an active angel of vengeance (cf. Wis 18¹⁶). In some of the Enoch apocalypses, on the other hand, belief in angelic and demoniacal agency is carried to great length. This is especially true of the oldest Enoch apocalypse (Eth. En. 1-36), of the Parables (Eth. En. 37-71), and of the Slavonic Enoch. Other works make a more moderate use of this belief, although it clearly underlies all their thinking. This is true of Tobit, the Testaments of the Twelve Patriarchs, the Apocalypse of Baruch, the Greek additions to Daniel, 2 Esdras, and the Book of Jubilees. The beliefs continued and were in some respects intensified, but, in proportion as the writers came under the sway of Greek rationalistic thought, they ceased to feel the need for such supernatural agencies. The author of Jubilees, in re-telling the story of Genesis, employs angels only where they appear in that book.

1. In certain writers the old tendency to attribute a spirit to everything still manifests itself. The author of the Enoch Parables speaks of a spirit of the sea, of hoar-frost, of hail, of snow, of fog, of dew, and of rain (Eth. En. 60¹⁷⁻²¹), while his favourite title for God is 'Lord of spirits' (38² 4 39¹² and *passim*). The author of Jubilees speaks of the spirits of fire, wind, darkness, hail, snow, frost, thunder, cold and heat, winter and summer (Jub 2¹), but he calls them angels at the same time, and he also terms the 'watchers' (an older name for angels) the 'fathers of spirits' (10⁵). These two agree in making spirits of the phenomena of Nature. In a different vein from those, the Testaments of the Twelve Patriarchs make spirits of man's immoral tendencies. Those spirits are in reality demons, and are under the direction of Beliar, the prince of demons (see art. BELIAL). Thus, we are told that there are seven spirits of deceit (Reuben 2¹). These seven are said to be the spirit of fornication, of insatiableness (resident in the belly), of fighting (resident in the liver and gall), of obsequiousness and chicanery, of pride, of lying and fraud, and of injustice with which are thefts and acts of rapacity (cf. Reuben 3³⁻⁵, Simeon 6⁷, Judah 20¹, Dan 5⁴, Gad 4⁷). Later additions make the senses and sleep spirits of wickedness (Reuben 2³ 3¹). The function of these spirits was to lead men into various sins, and, after having done so, to take vengeance on them (Levi 3²). The evil spirit which a man had served was said to await his soul as it left his body at death in order to torment it (Asher 6⁵). In most of the Apocryphal books the spirits have passed over either into angels or into demons.

2. Through literary influence there is a slight survival of the Cherubim and Seraphim of an earlier time. They, together with the Ophanim (serpent-beings developed out of the original Seraphim), are said to be holy angels who praise God (Eth. En. 61¹⁰ 71⁷, Slav. En. 20¹ 21¹); but these beings play no important part in the thought of the period.

3. It is far otherwise with the angels, who are

declared to be innumerable (Apoc. Bar. 59¹¹). This clearly represents the view of several of these writers. Thus the author of the Enoch Parables declares that the Most High is accompanied by 1000×1000 and 10000×10000 angels (Eth. En. 60¹ 71¹³). Angels were thought to be the agency by which everything was performed. Thus, it is said that myriads of angels accompany the sun on his course (Slav. En. 11⁴ 24), and that 400 take the sun's crown to God at sunset, and return it to the sun in the morning (14² 3). How vast must have been, then, the number of all the angels!

These numerous angelic hosts were believed to be divided into ranks. Distinguished from the common mass, the archangels commanded and directed others. This division appears most clearly in the evil angels or demons, a long list of whose leaders is given in the earliest Enoch apocalypse and in the Enoch parables (cf. Eth. En. 6⁷ and 69²). This list will be further considered in discussing demons below. The good angels had similar chiefs, of whom Gabriel was one (Slav. En. 21³). But, apart from the archangels, the angelic hosts were thought to be divided into several ranks. It is said in Slav. En. 20³ that, as the Lord sat on His throne, the heavenly hosts stood on the ten steps of it according to their rank. This implies that there were numerous gradations of rank. Four angels were called 'angels of the throne.' They were Michael, Gabriel, Uriel, and Raphael (Eth. En. 9¹ 40² and *Sib. Or.* ii. 215), though two passages (40⁹ 71⁹) substitute Phanuel (*i.e.* Penue) for Uriel. Just as human hosts had human commanders, so the archangels were the commanders of the others. Thus in the Testament of Levi 3^{5c} the angel of the Presence is counted an archangel, to whom angels below make an announcement of what is transpiring. This development of the angelic hosts into ranks was to some extent reflected in the canonical literature, and its later development may have been influenced by contact with Persian thought.

As to the nature of angels, the conception was not uniform. At first they were considered a kind of supernatural men: thus, in all the books that speak of them, they are frequently called 'men' (see, *e.g.*, Slav. En. 1-7). They are, like men, said to possess bodies and spirits (Eth. En. 67⁹). They intermarried at one time with human women (Eth. En. 7¹, Slav. En. 18⁴). Enoch after translation became an angel (Slav. En. 22), showing that they were considered in many ways kindred to men. This view is a survival of the old conception reflected in Gn 6²⁻⁴. Gradually another view developed, according to which the constitution of angels was quite different from that of men. They are, accordingly, said to have a nature like that of fire (Slav. En. 29¹ 3), and to have been made at the beginning of flame and fire (Apoc. Bar. 21⁶); their splendour is said to be equal to that of the stars (51³). This view was, in some cases where tradition perpetuated the crasser view, blended with the other. Thus Enoch was thought to have been put through a process of purification and glorification before he became an angel (Slav. En. 22); and later, when he was permitted to return to the earth for thirty days, an angel chilled his face, apparently to dim the lustre of its angelic glory, before he descended to mingle with men (cf. Slav. En. 36² 37¹ 38¹). The forces of Nature were at times regarded as angels. Thus frost, hail, and fog are so designated in Eth. En. 60¹⁷⁻¹⁹, and the author of Jubilees calls these and similar forces of Nature indifferently 'spirits' and 'angels' (Jub. 2¹). At the same time angels were thought to have definite limitations. They were not able to hinder the work of God (Eth. En. 41⁹); they were ignorant of their own origin (Slav. En. 24³); fallen angels could not see the glory of God

(Eth. En. 14²¹, Slav. En. 24²), and Enoch, a man, interceded for them (Eth. En. 15²).

The whole course of Nature was thought to be carried on by angelic agency. Myriads of angels attend the sun (Slav. En. 14), they regulate the courses of the stars (ch. 19), they guard the habitations of snow (ch. 5), and keep the treasuries of oil (ch. 6). Spirits or angels control the lightning, causing a pause before the thunder comes (Eth. En. 60¹³⁻¹⁵). They control the workings of frost, hail, mist, dew, and rain; they preside over the treasuries of these (vv. 16-22). Activities of many other kinds were attributed to angels. They kept the garden of Eden (Slav. En. 8); fiery angels now surround Paradise (30¹); and angels built the ark (Eth. En. 67²).

One of the important functions of angels was to guide and instruct the great apocalyptic seers. The angel of peace went with Enoch (Eth. En. 40³ 43³), and conducted him to the first heaven (Slav. En. 3), while Gabriel later took Enoch to God (20²). An angel talked to Ezra (2 Es 24⁴, 46. 43 51⁵ 71¹); and Uriel was sent to Ezra (41. 25 51⁵, 20 71 10²⁸, 29). An angel revealed to Jacob Reuben's sin with Bilhah (Test. of Reuben 3¹⁵); an angel invited Levi to heaven, and showed him the secret of heaven to prepare him for the priesthood (Test. of Levi 2⁶ 5¹); an angel informed the patriarch Judah that he should be king of Jacob (Test. of Judah 21⁵), and announced to Jacob the birth of Rachel's children (Test. of Issachar 2¹). The angel of peace guides the soul of a good man at death (Test. of Benj. 6²). Angels, called 'watchers,' came to earth in the days of Jared to teach men (Jub. 4¹⁵); an angel, spoken of as a 'holy one,' called to Hagar (17¹⁴); angels went up and down the ladder of Jacob's dream (27²¹); angels smote the flames of fire for the three children (v. 23). An angel told Habakkuk to carry his dinner to Daniel who was in the lion's den at Babylon, and took Habakkuk by the hair and transported him from Judaea to Babylon for this purpose and back again (Bel vv. 34-39). The angel Raphael came to heal Tobit's blindness (To 3¹⁷), accompanied the young Tobias (5⁴⁻⁶, 21), instructed him how to drive an evil spirit away (6. 8²²), was sent by Tobias to Media after money (9¹²), opened Tobit's eyes (11²², 25.), and was offered half the money (12⁵). Angels are portrayed as pitiful; they were in anguish when Zion was delivered to destruction (Apoc. Bar. 67²); and they are also represented as intercessors (Test. of Levi 3⁵ 5⁷, Test. of Dan 6²). It thus appears that all possible helpful agencies were attributed to them.

As angels were God's agents for blessing, so they were His instruments of chastisement. In the time of the Maccabees, prayer was offered that an angel might destroy the Greeks, as an angel destroyed the Assyrians (2 Mac 11⁶ 15²²). Enoch in the place of punishment saw angels administering torture (Slav. En. 10²²). It was believed that on the Day of Judgment an angel would be appointed avenger (Assump. Mos. 10²). An angel of God is said to have received orders to cut a sinner in twain (Sus vv. 25. 29). The word of God was said to have been an active angel of vengeance on the night of the Exodus (Wis 18¹⁵), and two angels were believed to have once descended from heaven to bind a hostile king (3 Mac 6¹⁸). When Jerusalem was destroyed, four angels stood at its four corners with lamps and accomplished its ruin (Apoc. Bar 7¹ 8¹). There was also an angel whose chief function was to bring death (21²³). Whatever, therefore, needed to be accomplished, whether good or bad, there was an angel to do it.

The tendency observable in a slight degree in the canonical literature to give the angels individual names appears in a greatly heightened form in the Apocryphal literature.

4. The conceptions of demons which appear in the Apocryphal literature are of four distinct types. Two of these regard the arch-demons as fallen angels, but in one type this angelic genesis of demons is much more prominent than in the other. (a) In the canonical literature discussed above, Satan was regarded as once of the number of the Divine beings who formed Jahweh's court (Job 1. 2). The steps by which in the canonical literature he became the great opposer of good have already been sketched. In one type of Apocryphal thought he became the arch-demon, who tempted man and led him astray (see Wis 2²⁴ and Slav. En. 3³¹). These writers simply took Satan over from the canonical literature, and his semi-Divine or angelic origin apparently was forgotten. The author of Wisdom moved in an atmosphere of philosophic thought in which neither angels nor demons played any considerable part. The author of Slavonic Enoch, though he makes much of angels, has almost nothing to say of demons. He probably believed in them, but the interest of his narrative led him to place the emphasis elsewhere. These writers call Satan by the Gr. tr. of his name, *diabolos*, or 'devil.' They identify him with the serpent of Eden, and account for the origin of sin by his agency in leading man astray.

(b) The authors of Eth. En. 1-36 and of the Enoch Parables (En. 37-71) represent a different type, being much more keenly interested in tracing the origin of demons and of evil. Instead of taking one arch-demon from the canonical literature, they go back to the narrative of Gn 6²⁻⁴, and account for the origin of demons and of sin by elaborating the hint there given. Persian dualism had sufficiently influenced their thought, so that matter was to them corrupt. That angels should come to earth and have connexion with human wives implied, they thought, a previous rebellion and sin on the part of the angels. The hint which supplied the point of departure for this view was probably given by the story of Satan in the prologue of the Book of Job. Those angelic hosts who sinned were numerous, but they were led by certain archangels, whose names are given somewhat differently by the two writers. These with their followers landed on Mount Hermon, and, after satisfying themselves with human wives, taught men various sins, some teaching one and some another. One taught enchantments, another astrology, another the making of swords, another the art of abortion, and another that of writing. The one who taught the use of coats of mail and of swords also seduced Eve (cf. Eth. En. 6-9 and 69). These writers, like the author of the J document of the Hexateuch, regarded the arts of civilization as having had a common origin with sin. Among the names of these arch-demons the canonical names of Satan and Azazel are found, but they play a comparatively small part. The rôle of Azazel is more prominent than that of Satan. The larger number of these angels (and to them are attributed the most hurtful influences) are called by names not found in the canonical literature. It appears from these names that many of them were called by names appropriate to angels. The degradation of the names to demons was in accord with the theory that they were fallen angels. In one passage (Eth. En. 21⁶) they are identified with the stars. Having introduced sin into the world, those fallen angels were regarded as the presiding geniuses of various forms of transgression and corruption. They were themselves, however, thought to be already undergoing punishment. They were bound and were being tormented by a great fire (Eth. En. 21⁵⁻¹⁰ 54¹⁻⁵).

(c) The Book of Tobit represents a third type of thought. In it but one demon appears,—Asmodeus,—and he is clearly, as his name implies, of Persian

origin (but see Ginzberg, *JE* ii. 217-219). The author of this book had so come under Persian influence, probably by living in the East, that its demonology or demonological vocabulary influenced him more than did that of the canonical, or even the apocryphal, writings of his people.

(d) A fourth type of thought is represented by the Testaments of the Twelve Patriarchs and the Ascension of Isaiah. In these works the demonology, while very real and all-pervasive, is made up in a rational way, and such contact as it has with canonical thought is at quite a different point of that thought. As mentioned above, the world is thought to be pervaded by evil spirits, but these are simply the personification of the evil propensities of man—jealousy, lust, pride, chicanery, injustice, rapacity, etc. Writers who thus made evil spirits of the sinful tendencies of men about them moved in a somewhat different realm of thought from those who connected these evil spirits with the story of Gn 6³⁻⁴ and gave to them orthodox Hebrew names. Over this mass of evil spirits the two writers under consideration believed that Beliar presided. Beliar to them takes the place of the devil in Wisdom and the Secrets of Enoch, of Semyaza in the other Enoch books, and of Asmodeus in Tobit. Beliar is a form of *Belial* (see vol. ii. p. 458^b f.). Belial had been used by Nahum (1^b) as the name of a great evil power. Possibly Belial was an old name for Sheol, though that is uncertain. It it were so, it is easy to see why these writers took it as the name of the prince and leader of all evil and destructive spirits.

To most Jews of the period, as indeed to most men of that time, the world was full of supernatural agencies. As there were angels to accomplish every good act, so there were demons or evil spirits to perpetrate every evil deed or to prompt every sinful impulse. Some of the writers, however, manifest no trace of this demonology; such are Ben Sira and the authors of the Books of Maccabees. The subject-matter of Sirach as well as the philosophical point of view of its author excluded any reference to them, while the author of 1 Mac had probably come so far under the influence of incipient Sadduceism that demons had little or no place in his thought. To most men, however, demons in one form or another were very real, and played an important part in life.

GEORGE A. BARTON.

DEMONS AND SPIRITS (Indian).—I. Prevalence of the belief in spirit influence.—The people of India, particularly the forest tribes and the lower castes, from the cradle to the grave or burning-ground, are oppressed with a feeling best described as demonophobia—the belief that they are haunted by evil spirits of all kinds, some malignant fiends, some mischievous elves, to whose agency are attributed all kinds of sickness and misfortune. Their worship is a worship of fear, the higher gods, particularly in the opinion of the less intelligent classes, being regarded as otiose and indifferent to the evils which attack the human race, while demons are habitually active and malignant.

Among the Thārus of the Himālayan Tarāi, 'the dhūts, or demons lurking in the forest trees, especially the weird cotton

tree (*Bombax heptaphyllum*), and the *prets*, or spirits of the dead, lead them a very miserable life. When the last ray of light leaves the forest, and the darkness settles down upon the villages, all the Thārus, men, women, and children, huddle together inside their fast-closed huts, in mortal dread of those ghostly beings, more savage and cruel than the leopards, tigers, and bears that now prowls about for their prey. Only the terrible cry of "Fire" will bring these poor fear-stricken creatures to open the doors and remove the heavy barriers from their huts at night. And even in the daytime, amid the hum of human life, the songs of the birds, and the lowing of the cattle, no Thāru, man, woman, or child, would ever venture along a forest-line, without casting a leaf, a branch, or a piece of old rag, upon the *bansati* (Skr. *vanaspati*, "king of the woods") formed at the entrance of deep woods, to save them from the many diseases and accidents the goblins and malignant spirits of the forests can bring upon and cause them' (S. Knowles, *The Gospel in Gonda*, 1889, p. 214).

In S. India, where this belief is even more widely spread than in the N., 'every village is believed by the people to be surrounded by evil spirits, who are always on the watch to inflict disease and misfortunes of all kinds on the unhappy villagers. They lurk everywhere, on the tops of palmyra trees, in caves and rocks, in ravines and chasms. They fly about in the air, like birds of prey, ready to pounce down on any unprotected victim, and the Indian villagers pass through life in constant dread of these invisible enemies. So they turn for protection to the guardian deities of their village, whose function it is to ward off these evil spirits and protect the village from epidemics of cholera, smallpox, or fever, from cattle disease, failure of crops, childlessness, fires, and all the manifold ills that flesh is heir to in an Indian village' (Bishop H. Whitehead, *Bull. Madr. Mus.* v. 126 f.). Traill, who took over charge of Kumau in 1820, reported that the population was divided into two classes, human beings and ghosts (E. S. Oakley, *Holy Himalaya*, 1905, p. 217 f.). For other testimony to the same effect, see S. Mateer, *The Land of Charity*, 207 ff.; Sir W. Sleeman, *Rambles and Recollections*, 1893, i. 283 ff.; Bishop R. Caldwell, 'The Tinnevely Shanars,' in B. Ziegenbalg, *Genealogy of the S. Indian Gods*, 1869, p. 166 ff. This feeling of pessimism, due partly to racial idiosyncrasy, partly to the rigour of their environment, has prevailed among the races of India from the very earliest times (see H. Oldenberg, *Rel. der Veda*, 1894, p. 39 f.; Atharvaveda, *SBE* xlii. *passim*).

2. Origin and character of the cult of demons and evil spirits.—Demonolatry, the worship of devils or demons, is a form of belief in its origin independent of Brāhmanism or the orthodox forms of Hinduism, though the latter has in many cases annexed and absorbed it (see § 12). The cultus is a true form of worship, and here the distinction between 'deity' and 'demon' is unmeaning, the latter being, as in the case of the orthodox gods, controlled by true worship or propitiation. But, like similar forms of popular belief in other parts of the world, it is amorphous and ill-organized, possessing little or no sacred literature and no established priesthood. The most obvious distinction is between non-human and human spirits.

(a) *Non-human spirits or fiends* are 'endowed with superhuman powers, and possess material bodies of various kinds, which they can change as they list, and which are subject to destruction. As free agents, they can choose between good and evil, but a disposition towards evil preponderates in their character' (G. Oppert, *Original Inhabitants of Bharatavarsha or India*, 515 ff.). The so-called Asuras, Dānavas, Daityas, and Rākṣasas belong to this group, 'all personations of the hostile powers of Nature, or of mighty human foes, both which have been eventually converted into superhuman beings.' This group as a whole seems to be derived from pre-Animistic beliefs, the worship or dread of 'powers' (*numina*, not *nomina*), the vague impersonations of the terror of night, hill, cave, or forest. They appear in the Vedas as malevolent beings hostile to the orthodox gods (A. Macdonell, *Vedic Mythology*, 1897, p. 156 ff.). Max Müller and J. Muir agree in denying that all these Vedic evil spirits were borrowed by the Aryans from the aborigines of India (*Contributions to the Science of Mythology*, 1897, i. 212; *Original Sanskrit Texts*, 1860, pt. ii. 330 ff.). It is safer to believe that among both Aryans and non-Aryans they were the result of pre-Animistic beliefs common to both races. At the same time, it is probable that the Aryan view of the demon world was coloured by their association with the indigenous races.

'The black complexion, ferocious aspect, barbarous habits, rude speech, and savage yells of the *Dasyus*, and the sudden and furtive attacks which, under cover of the impenetrable woods, and the obscurity of night, they would make on the encampment of the *Aryas*, might naturally lead the latter to speak of them, in the highly figurative language of an imaginative people in the first stage of civilisation, as ghosts or demons; or even to conceive of their hidden assailants as possessed of magical and superhuman powers, or as headed by devils. . . . At length the further advance of the *Aryas* would either drive the *Dasyus* into the remotest corners of the country, or lead to their partial incorporation with the conquerors as the lowest grade in their community. When this stage was reached, the *Aryas* would no longer have any occasion to compose prayers to the gods for protection against the aboriginal tribes; but their superstitious dread of the evil spirits, with which the popular mind in all ages has been prone to people the night, would still continue' (*Orig. Skr. Texts*, pt. ii. p. 409 f.). Hence it was the habit in ancient, as well as in modern times, to personify *Niśi* or Night as a demon; she comes at midnight, calls the house-master, and forces him to follow her whither she will; she drags him into the forest, drops him among thorns, or on the top of some high tree; and it is very dangerous to answer her call (*JASB* i. [1880] 49 f.; *Kathā-sarīt-sāgara* of Somadeva, tr. C. H. Tawney, 1880, ii. 604; Lal Behari Day, *Govinda Samanta*, 1874, i. 9; *NINQ* iii. [1894] 109).

As representing the vague terrors felt by early man in the desert and forest, these Indian spirits resemble in many ways the Arabian *jinn* (W. R. Smith, 119 ff.); or, as Westermarck (*MI*, 1908, ii. 589) designates them, 'beings invented to explain what seems to fall outside the ordinary pale of Nature, the wonderful and unexpected, the superstitious imaginations of men who fear.' Hence many of the Indian races represent their deities or demons as inhabiting wild hills or lonely forests. The *Meitheids* believe that their demons occupy hills (T. O. Hodgson, *The Meitheids*, 1908, p. 120). The *Konga Malayans* of Cochin worship two demoniacal deities named after the rocks in which they reside; *Sasthi*, a sylvan deity, is adored by the *Vallans*, and is said to live in a hill; the *Eravallars* believe that their forests and hills are full of dangerous demons, who live in trees, and rule the wild beasts, some of them afflicting particular families or villages, and are propitiated to relieve their hunger, not in the hope of gaining any benefit for their worshippers; the *Nayādis* worship a group of forest demons, one of which brings them game, and is abused for his ingratitude if the hunt proves unsuccessful (L. K. Iyer, *The Cochin Tribes and Castes*, i. 41, 230, 47, 53). Trees are also a favourite demon-haunt (Tylor, *Prim. Cult.* 2, 1873, ii. 221). The *Izhuvans* believe that trees are occupied by demons; and, when it is proposed to cut a tree, a notice to the demons is written on the bark informing them that it is intended to eject them (Iyer, i. 231; cf. Crooke, *PR* 2, 1896, ii. 90 f.; R. V. Russell, *Census Rep. Central Provinces*, 1901, i. 92). Many of the non-Aryan tribes in Bengal worship deities who reside in hills. Such are the *Juāngs*, *Santāls*, *Orāons*, *Cheros*, *Kandhs*, and *Bauris* (Risley, *Tribes and Castes of Bengal*, 1891, i. 353, ii. 233, 145, i. 202, 403, 80). The *Todas* believe that, before they were created, their gods occupied the *Nīlgiri Hills*; they now reside in heights close to the *Toda* hamlets (Rivers, *The Todas*, 1908, p. 182 ff.). In the same class are the water spirits or deities found all over the country, which are malevolent, and drag down unwary travellers—an idea which appears in the classical tale of *Narcissus* (Crooke, i. 42 ff.; Frazer, *GP* 2, 1900, i. 293). These *Rākṣasas*, *Dānavas*, or *Daityas* still maintain their position in popular belief, the tradition surviving through the study of the *Epic literature* and the older collections of folklore, like the *Jātakas* or the tales of *Somadeva*.

(b) *Human spirits*.—The second and much more important class of evil spirits is that of the ghosts of human beings, known collectively as *Bhūta* (Skr. rt. *bhū*, 'to become, be'). In contradistinction to the fiends or non-human spirits, these are the malignant spirits of men, which for various reasons cherish feelings of hostility to the human race, and, if not expelled or propitiated, do endless mischief. Among the more primitive or debased tribes the belief that disease and death are the result of the normal or abnormal processes of Nature is only imperfectly realized; and these and other calamities are regarded as the work of evil spirits, sometimes acting on their own initiative, sometimes incited by a sorcerer or witch.

3. The *Bhūta*: their characteristics.—In S. India three terms are used to designate these spirits—*Bhūta*, *Preta*, *Pisācha*, the first name being ordinarily applied to all three classes.

'These beings, always evil, originate from the souls of those who have died untimely or violent deaths, or been deformed, idiotic, or insane; afflicted with fits or unusual ailments; or drunken, dissolute, or wicked during life. The precise distinction between the three classes is that the *Preta* (Skr. rt. *prē*, 'to depart from life') is a ghost of a child dying in infancy, or of one born deformed, imperfect, or monstrous—events attributed to neglect in performing certain ceremonies prescribed during the ten days when, according to popular notions, the limbs of the

embryo are forming in the womb: such a ghost becomes a misshapen, distorted goblin. The *Pisācha* ["flesh-eater"], on the other hand, is derived rather from mental characteristics, and is the ghost of madmen, habitual drunkards, the treacherous and violent-tempered. . . . *Bhūtas* emanate from those who die in any unusual way, by violence, accident, suicide, or sentence of law; or who have been robbers, notorious evil-doers, or dreaded for cruelty and violence. The death of any well-known bad character is a source of terror to all his neighbourhood, as he is sure to become a *Bhūta* or demon, as powerful and malignant as he was in life' (M. J. Walhouse, *JAI* v. 408 f.). They are represented with small thick bodies, of a red colour, with pigtailed round their heads, horrible faces, the teeth of a lion in their mouths, and their bodies covered with ornaments (Caldwell, in Ziegenbalg, 153). In the Deccan they live in large trees, empty houses, or old wells; they often appear as a deer, a tall figure, a strange ox or goat; if a person sleeps under a haunted tree, cuts a branch of it, defiles the abode of the *Bhūta*, or jostles one on the road, he falls sick or some ill-luck befalls him (*BG* xviii. pt. i. 292). In *Gujarāt* the *Bhūta* and *Preta*, like the European Vampire, are believed to take possession of a corpse, and speak through its mouth; they appear in the form which they possessed when living; enter a living man, and cause him to speak as they please; afflict him with fever or other disease; appear as animals, and frighten people by vanishing in a flame of fire; remain sometimes invisible, and speak only in whispers; a *Bhūta* has been known to come to fisticuffs with a man, or to carry him off and set him down in a strange place; cases have been reported in which women have been found with child by them; when a *Bhūta* appears in a tree, a pile of stones is raised at its root, to which every passer-by adds one; if stones be not procurable, a rag is stuck to the tree, which is hence known as the 'Rag-uncle' (cf. Hartland, *LP*, 1895, ii. 176 ff.; Crooke, *PR* 2 i. 161 ff.) (*Dalpatram Dāyā*, 'Bhoot Nibundh', in A. K. Forbes, *Rās Mālā*, 644 ff.). The *Bhūta* eat filth, and drink any water, however impure; they cannot rest on the ground, and for this reason a peg, or brick, or bamboo pole is placed at their shrines on which they may sit or perch; they speak a sort of gibberish in a nasal tone, and hence 'goblin speech' (*pisācha bhāṣa*) is the term applied to the jargon in the mediæval drama and in modern English (*PR* 2 i. 238); those who come from dead *Brāhmins* are wheat-coloured, while others, like the ghost of a negro, are black and specially dreaded (ib. i. 236 ff.). As a rule they are helpless by day, and move abroad at night; but midday, when they cook, and evening are specially dangerous times, and women should not move about, especially at midday, unprotected (E. Thurston, *Castes and Tribes of S. India*, vi. 230; A. K. Iyer, i. 150; *BG* xviii. pt. i. 292; *PNQ* iv. 132; cf. the similar classical belief [Theocr. *Idyll* i. 15; Lucan, *Pharsal* iii. 423; R. Rodd, *Customs and Lore of Modern Greece*, 1892, p. 181; J. T. Bent, *The Cyclopes*, 1855, p. 85]; cf. also art. CALENDAR [Celtic], vol. iii. p. 82).

4. *Spirits of the murdered*, the unsatisfied, the foreigner.—Of these classes of *Bhūta* the most dangerous are the spirits of the murdered, the unsatisfied, and the dreaded foreigner.

(a) *Spirits of the murdered*.—All over the world the ghost of a murdered person is believed to cherish an angry passion for revenge (Westermarck, i. 418 f.). Some of the most dangerous *Bhūta* are of this class.

In Coorg the demon most widely feared is that of a magician who was shot. *Elmakaltal*, mother of seven sons, who was buried as a sacrifice under the walls of the *Kolhapur* fort (cf. Crooke, ii. 173 ff.), causes food supplies to dwindle, the milk to give no butter, and the cattle to sicken; the *Orāons* distinguish three classes of such demons, who are known as the *Bhūla*, 'wanderers who have lost their way,' including those who have been murdered, hanged, or killed by a tiger (G. Richter, *Manual of Coorg*, 1870, p. 165; *Mem. As. Soc. Bengal*, 1906, i. 140 f.). Several of the most widely revered local deities of N. India are the spirits of persons, particularly *Brāhmins*, who have lost their lives in some tragical way, and the ghosts of dead bandits, or of those who were slain by tigers or other wild animals (E. A. Gait, *Census Rep. Bengal*, 1901, i. 196 ff.; Crooke, i. 191 ff., ii. 213 f.).

Hence comes the conception of a special *Brāhman* demon, known as *Brāhma-rākṣasa*, *Brāhma-daitya*, *Brāhma-puruṣa*, or popularly as *Brahm*, the spirit of a murdered *Brāhman*. The *Brāhman* being himself spirit-laden, his ghost is invested with special potency for good or evil. In Bengal

'such spirits are specially powerful and malicious. Sometimes they are represented as a headless trunk, with the eyes looking from the breast. They are believed to inhabit large trees by the side of a river or in some lonely place, whence they throw stones at travellers and lead them astray on dark nights, and woe betide the unfortunate who should give one of them cause for offence (e.g. by unwittingly felling the tree in which they have taken up their abode), or who was in any way responsible for his death. He can only escape the evil consequences by making the *Bārhām* his family deity and worshipping him regularly' (Gait, i. 193; Crooke, ii. 78). In W. India the rulers of the

State of Sāvāntvāḍī are afflicted by the demon-spirit of a Brāhman killed in the 17th century. He is particularly excited if any one uses his seal of office, and down to the present day a Brāhman is always employed to seal the State papers (*BG* x. 440). In the Deccan the Brāhma-samāndh, the spirit of a married Brāhman, haunts empty houses, burning-grounds, river-banks, seldom attacks people, but when he does attack them it is difficult to shake him off (*ib.* xxiv. 415). In the same region the Brāhma-purusa is the spirit of a miser Brāhman, who died in grief, intent on adding to his hoard; when he lives in his own house, he attacks any member of the family who spends his money, wears his clothes, or does anything to which in life he would have objected (*ib.* xviii. pt. i. 553f.).

(b) *Those who have left this world with unsatisfied desires.*—The spirits of the unhappy or unsatisfied fall into several groups:—

(a) *Unhappy widows and widowers, childless women.*—Among these the most dreaded is the Churel, Churail, Chudel, Chudail, or the Alwāntin, as she is called in the Deccan—the spirit of a pregnant woman, one dying on the day of childbirth, or within the period of puerperal pollution.

In the Panjāb she appears as a pretty woman, with her feet turned backwards, and is especially dangerous to members of her own family (*PNQ* ii. 168f.). Among the Orāons, when the exorcist forces her to appear in the flame of his lamp, she looks like the Dākini, the common type of ogress; but her feet are distorted, she is hunch-backed, and has a large hole in her belly like the hollow in a tree (*MASB*, 1906, i. 140). In Madras a woman who dies prematurely, especially as the result of suicide or accident, becomes a she-devil, known by the euphemistical title of Mohani, 'the charmer,' and she so continues until her normal term of life is over (*NINQ* i. 104). In the Deccan the Jakhin (Skr. *yakṣiṇī*, rt. *yaks*, 'to move') is the spirit of an uneasy married woman, who haunts bathing and cooking rooms, attacks her husband's second wife and children, takes her own children from their stepmother, or, like the British fairies, steals babies and returns them after a time (*BG* xxiv. 416). The spirit of a deceased husband or wife, particularly the latter, is most dangerous to his or her successor. This is, in part, an explanation of the objection felt among the higher castes to widow-marriage, of the custom of performing the rite at night in order to avoid the observation of the angry spirit, and of the use of sundry ceremonies which repel evil spirits (R. E. Enthoven, *Bombay Census Rep.*, 1901, i. 208). Among the Kolis of Ahmadnagar a widow bride is held to be unlucky for three days after her marriage, and must take care that no married woman sees her until that period is over; if after such a marriage the widow bride or her husband should fall sick, the medium, when consulted, usually reports that it is caused by the spirit of her first husband, who is annoyed because his wife has married again; the bride has to give a feast, spend money in charity, and wear in a copper case round her neck a tiny image of her late husband, or set it among the household gods (*BG* xvii. 206). Such amulets are known in the Panjāb as 'the crown of the rival wife' (*saukan maurā*), and to them all gifts made to her are presented as a measure of precaution (H. A. Rose, *Census Rep.*, 1901, i. 121). Sometimes the widow wears a gold-wire bracelet on her right wrist, and every year, in the name of her deceased husband, feeds a Brāhman woman whose husband is alive, and gives her clothes (*BG* xxii. 814). When a widow of the Let tribe in Bengal marries again, her second husband is usually a widower, and he places the iron bangle of his first wife on the arm of her successor (E. A. Gait, i. 421). In the Deccan the Aśā is the spirit of a young woman who committed suicide after bearing one or more children; she attacks young women, and must be propitiated by offerings of cooked rice, turmeric, red powder, and a bodice (*BG* xviii. pt. i. 553). The Hadal or Hedālī, the spectre of a woman dying in pregnancy or childbirth, is plump in front and a skeleton behind, lives in wells, trees, or dark corners of the house, attacks women, and sometimes appearing as a beautiful woman, lives with men until her fiend nature or spectre form is discovered (*ib.* xviii. pt. i. 554). The corpses of women dying under such circumstances are often burnt in order to prevent sorcerers from digging them up and using the unborn fetus or the bones of the mother for purposes of Black Magic (*ib.* xxiii. 201; A. K. Iyer, i. 771.).

(β) *Unhappy children and the unmarried.*—Under the influence of the same belief that the spirits of those dying with unsatisfied desires become malignant, children and unmarried persons are included in the army of evil spectres.

In the Himālaya, the Tolā or Masān (the latter a term ordinarily used to designate cemetery spectres) are the spirits of children or bachelors, sometimes appearing in the form of a will-o-the-wisp, banished from the society of other spirits, living in wild and solitary places, sometimes prowling about in the form of bears or other wild animals. They are, as a rule, harmless, and their present estate is only temporary, because after a time they undergo transformation, and assume other shapes (Cooke, i. 261; Oakley, 218).

The spirits of the unmarried dead form a large group.

In S. India such spirits are called Virika (Skr. *vīra*, 'heroic,' 'eminent'), 'and to their memory have small temples and

images erected, where offerings of cloth, rice, and the like are made to their *manes*. If this be neglected, they appear in dreams, and threaten those who are forgetful of their duty' (F. Buchanan, *A Journey through Mysore, Canara, and Malabar*, i. 359; cf. ii. 120, 162, where the name is extended to the spirits of bad men, who afflict the living). In Kanara, if neglected, such spirits send pestilence among men and sheep, and disturb people by dreams and nightmares (*BG* xv. pt. i. 300). In the Deccan the Jhoting is the spirit of a youth dying unmarried and leaving no relatives; it lives in trees, ruins, or burial-grounds, is most faithless and can be bound by no oath, personifies absent husbands, leads wayfarers into pools and drowns them, waylays postmen, who are safe so long as they do not lay down their bags (*BG* xviii. pt. i. 554). Elsewhere the Jhoting is the ghost of a low-caste Hindu who died with unsatisfied desires, wears no clothes, and lets his hair flow loose; he lives in a house of his own, but, if this be burnt or pulled down, he removes to a river or well; he fears to enter sacred places, or to attack persons learned in the Vedas and strict in the performance of their religious duties (*ib.* xxiv. 417). In the Deccan those who die after the rite of thread-girding and before marriage become evil spirits, known as Muñjā (Skr. *mūñja*, 'the fibre girdle of the Brāhman') or Athavar (Skr. *aṣṭavarṣa*, 'eight years old') (*ib.* xviii. pt. i. 539). Such spirits are greatly feared in the Panjāb, where they are known by the euphemistical title of 'father' (*pīṭā*); shrines are erected to them near tanks, and offerings are made (*NINQ* v. 179). A typical case of the deification of the unmarried is found in the cult of Dūhā Deo, 'the defiled bridegroom,' which seems to have originated in the Central Provinces, where a bridegroom on his wedding journey was killed by a tiger or in some other tragical way; at marriages a miniature coat, shoes, and bridal crown, with a little swing to amuse the child, are offered to him (R. V. Russell, i. 80; Crooke, i. 119f.). In the Panjāb, under the influence of Vaiṣṇava beliefs, he is said to represent the relationship of God to the human soul, exhibited as that of a lover to his mistress (H. A. Rose, i. 130). For similar legends of a bride and bridegroom turned into stone, see J. Grimm, *Teut. Mythol.*, Eng. tr., 1888, iv. 1446; W. C. Borlase, *Dolmens of Ireland*, 1897, ii. 649.

(c) *Spirits of foreigners.*—The same feelings of awe or fear naturally attach to the spirits of dead foreigners, whose valour, cruelty, or other qualities have impressed the minds of a subject people.

At Sahāranpur a Musalmān named Allah Bakhsh, who died in a state of impurity, has become a dangerous demon, worshipped by the lower castes of Hindus (*NINQ* v. 183). Such a spirit is known by the euphemistical title of Mamdūh 'praised,' 'famous,' or as Najis, 'the impure one.' He wears Musalmān dress, with his hair on end, and carries branches in his hands; even the Pir, or saint, sometimes becomes hostile to people who unguardedly sit upon his tomb, spit at it, or in other ways annoy him (*ib.* v. 106; *BG* xxiv. 416f., xviii. pt. i. 554). People resort to the shrine of a Muhammadan saint Alam Pir, at Muzaffargarh in the Panjāb, to procure release from such spirits. In fact, the Indian Muhammadans have appropriated much of the demonology of their Hindu neighbours, and exorcism and the modes of securing control of evil spirits have become important branches of science (G. A. Herklots, *Qanoon-e-Islam*, 1863, p. 201f.; *BG* ix. pt. ii. 147f.). In the same way the dread spirits of Europeans are propitiated. That of a certain Captain Pole, killed at Travancore in 1809, is appeased with gifts of spirits and cigars (*JASB* i. 104; E. Thurston, *Ethnographic Notes*, 1906, p. 296f.). Similar cases of the propitiation of the spirits of European men and women are common in various parts of the country (Cooke, i. 199; *BG* xviii. pt. i. 413, pt. iii. 447; *NINQ* ii. 93; *PNQ* ii. 183). In some places, however, such spirits are regarded as kindly, as in the cases of General Raymond, who died at Haidarābād in 1798, and Colonel Wallace, who died in the Deccan in 1809 (S. H. Bilgrami and C. Willmott, *Hist. and Descr. Sketch of R.H. the Nizām's Dominions*, 1883, ii. 600f.; *BG* xviii. pt. iii. 447f.).

5. Modes of repelling or conciliating evil spirits.

—Various methods are employed to repel or conciliate evil spirits. If the spirit after death is to pass to the home of the Pitrī, or sainted dead, or to undergo the necessary stages of transmigration, it is necessary that the funeral rites (*śrāddha*) shall have been duly performed (see ANCESTOR-WORSHIP [Indian], vol. i. p. 450f.). Hence the family spirit is usually benevolent, if care be taken to provide for its wants. Thus arises the very common classification of spirits into the 'inside' and the 'outside'—the former usually friendly; the latter, being foreigners, usually hostile. The Orāons divide their spirits into those of the house, the sept, the village, and the Bhūla, or dangerous wanderers (*MASB*, 1906, i. 138). In the Deccan there are 'home' and 'outside' spirits, the latter not being greatly feared, because, though every field has its evil spirit, they are restrained by the Guardians (see § 9), who are more powerful and able to control them. The friendly house spirit generally merges

into the protecting family deity, like Gumo Gošāin, the Mālē god who dwells in the house pillar, or Dharma Pennū, the Kandh god of the family or tribe (Risley, ii. 58, i. 403).

In any case, after a time, usually represented by the period of human memory, the spirit automatically passes to its rest, and ceases to be a source of danger to the survivors.

In the Deccan the life and influence of a Bhūta last for four, and the evil conditions of haunted places for two, generations (*BG* xviii. pt. i. 555); the Hpon of Upper Burma worship only their fathers and mothers (*Gazetteer Upper Burma*, i. pt. i. 568, 600; cf. Crooke, i. 178).

When the inability to perform the funeral rites and the consequent restlessness or maliciousness of the spirit are due to the absence of the corpse, as in the case of death occurring in a strange land or the failure to recover the body, the relatives perform the funeral in effigy.

Among the Garos, when a man dies away from his village and cannot be cremated at home, the relatives buy a number of cowrie-shells and put them in a pot to represent the bones of the dead man, or erect a mortuary hut in which they are deposited (*A. Playfair, The Garos*, 1909, p. 111). In some cases, among orthodox Hindus, the corpse is represented by branches of the sacred *Butea frondosa* tree—the head by a coco-nut; pearls, or, failing them, cowrie-shells, for the eyes; the whole being covered with paste made of ground pulse to simulate the flesh, and a deer-skin representing the cuticle; the officiating priest, by the use of magical formulae (*mantra*), infuses life into the image, the animating principle being represented by a lamp placed close by; when the lamp goes out, the usual funeral rites are performed (*NINQ* iii. 201; cf. *BG* xviii. pt. i. 564). When the death of a relative occurs under an unlucky constellation in a Brāhman family, a special quieting rite (*śānti*) is performed to appease the uneasy spirit.

Even in the case of those dying in a natural way, precautions are taken to prevent the spirit from returning to its original home from the burial- or cremation-ground.

Among the Madras tribes, when a Bāvuri is being buried, the friends say: 'You were living with us; now you have left us. Do not trouble the people'; the spirit of a dead Savara is solemnly adjured not to worry his widow: 'Do not send sickness on her children. Her second husband has done no harm to you. She chose him for her husband, and he consented; O man, be appeased! O unseen ones! O ancestors! be you witnesses' (Thurston, i. 179, vi. 321). When the corpse of a Taungtha is carried outside the house, the chief mourner pours water on it, saying: 'As a stream divides countries, so may the water now poured divide us!' (*Gazetteer Upper Burma*, i. pt. i. 557).

Another plan is to endeavour to deceive the spirit, so that it may not find its way back, by taking it out of the house feet foremost, or through a door not usually opened for ingress and egress.

The Meitheis never carry the corpse over the threshold of the main door; sometimes a hole is cut in the wall, or the tiny side entrance is used (Hodson, 117). Among the Maghs of Bengal, when the master of the house has died, the mourners on their return cut away the house ladder, and creep in through a hole cut in the back wall, in order to baffle the ghost (Risley, ii. 84). A similar device is that of making the corpse-bearers change places on the road to the grave, and turn the corpse in the opposite direction (*BG* xviii. pt. i. 424; ix. pt. i. 48). With the same intention, the mourners are forbidden to look back when leaving the cemetery (Crooke, ii. 56 f.), the evil influence being communicated through the sight (*E. Crawley, The Mystic Rose*, 1902, p. 115; *FL* xviii. [1907] 845).

Sometimes the repression of the evil spirit is secured in a physical way.

The thumbs and great toes of the corpse are tied together to prevent the ghost from 'walking,' or it is tied up in a cotton bag, as among the Bhotiyas (*Playfair*, 106; Thurston, iii. 104, iv. 371, 494, v. 483, vii. 83; *Gazetteer Upper Burma*, i. pt. i. 557; *MASE*, 1905, i. 109). Among the Koyis of Madras, when a girl dies of syphilis, a fish-trap is erected to catch the spirit, and prevent it from entering the village (Thurston, iv. 55). Some people, when returning from the funeral, sling pebbles towards the pyre to scare the spirit, or make a barricade of thorny bushes between the grave and the house (Crooke, ii. 57; Risley, ii. 75). With the same intention, the names of deceased relatives are tabu for a generation, to avoid recalling their spirits; or, when parents die, men assume the names of their deceased grandfather; women, of their grandmother (Sir R. Temple, *Census Rep. Andaman Islands*, 1901, i. 253). One reason given for the wide-spread custom of shaving after a death is that it changes the appearance of the mourners so as to deceive the pursuing spirit, or removes the shelter in which it may hide and cling to the mourner (Frazer, *JAI* xv. [1886] 99). To prevent the spirit rising from the grave and 'walking,' it is a common practice, particularly among menial castes, to bury the corpse

face downwards, and to pile stones and thorns on the grave (Thurston, iv. 322, 374, vii. 426; Gait, i. 419; Crooke, ii. 60; *BG* xvii. 196; cf. R. S. Hardy, *Eastern Monachism*, 1850, p. 322).

Precautions in the case of more dangerous spirits.—Precautions of this kind are more urgent in the case of spirits specially malignant.

In the case of the Churel, sometimes the corpse of a woman dying pregnant is cut open and the child removed; or the spirit is scared by fire, earth, and water; or iron nails are driven into her fingers, and the thumbs fastened together with iron rings (Crooke, i. 272 f.). The Orāons carry the corpse of such a woman to a distance, break the feet above the ankles, and twist them round, bringing the heels in front, into which they drive long thorns; they bury her deep in the earth face downwards, and place with her corpse the bones of an ass, reciting the anathema: 'If you come home, may you turn into an ass!'; the roots of a palm-tree are also buried with her, with the curse: 'May you come home when the leaves of the palm wither!'; when they leave the burial-ground, they spread mustard seeds along the road, saying: 'When you try to come home, pick up all these!' (*MASE*, 1906, i. 140). This last charm is very common, and is one of the usual impossible tasks found in the folk-tales (Crooke, i. 273 f.; *BG* xix. 134, xxiv. 417; Steel-Temple, *Wide-awake Stories*, 1884, p. 430). These precautions, under Brāhman guidance, have been elaborated into a special funeral ritual for women dying during the menstrual period, after the sixth month of pregnancy, and within ten days after childbirth (*BG* xviii. pt. i. 561 f.).

The misery of the unmarried dead is relieved by the curious rite of marriage with the dead (cf. Frazer, *Pausanias*, v. [1895] 389 ff.)—a custom which in India seems to prevail only in Madras and among some Burmese tribes.

When a Toda boy dies unmarried, a girl is selected; her head is covered by her father with a mantle, and she puts food into the pocket of the mantle of the dead; the Nāmbūtiri Brāhmans perform the rite of tying the marriage necklace on a dead unmarried girl (Rivers, 367, 701; *Bull. Madr. Mus.* iii. 61). The disgusting custom of enforced sexual connexion by a male with such a dead girl, ascribed by Abbé Dubois to the Nāyars, seems to be based on a misunderstanding of this rite of mock marriage (J. A. Dubois, *Hindu Manners, Customs, and Ceremonies*³, 1906, p. 161 f.). Besides the Todas and Nāmbūtiris, several S. Indian tribes perform this mock marriage, such as the Badagas, Billavas, and Komatis, while among the Pallis and Vānyans the dead bachelor is solemnly married to the *arka* plant (*Calotropis gigantea*) (V. N. Aiyar, *Travancore State Manual*, 1906, ii. 259; Thurston, i. 117, 250 f., iii. 834, v. 197, vi. 22, vii. 315). Among the Chins of Upper Burma, if, before the great contracting ceremony is completed, either party dies, the rites are continued with the corpse, which is kept unburied until the rite is finished; in this they probably follow the custom well established among the Chinese (*Gazetteer Upper Burma*, ii. pt. ii. 303; J. J. M. de Groot, *Rel. Syst. of China*, 1894, ii. 800 ff.; J. H. Gray, *China*, 1878, i. 216 ff.).

6. Possession by spirits.—Possession by evil spirits or demons is of two kinds:

The theory of embodiment serves several highly important purposes in savage and barbarian philosophy. On the one hand, it provides an explanation of the phenomena of morbid exaltation and derangement, especially as connected with abnormal utterance, and this view is so far extended as to produce an almost general doctrine of disease. On the other hand, it enables the savage either to "lay" a hurtful spirit in some foreign body, and so get rid of it, or to carry about a useful spirit for his service in a material object, to set it up as a deity for worship in the body of an animal, or in a block or stone or image or other thing, which contains the spirit as a vessel contains a fluid; this is the key to strict fetishism, and in no small measure to idolatry' (Tylor², ii. 123).

These two varieties of spirit possession can be traced in Indian beliefs.

(a) *Abnormal or disease possession.*—In the first place, we have cases of abnormal possession. Certain persons are supposed to be specially liable to spirit possession, thus defined by a native writer:

'The men most liable to spirit attacks are the impotent, the lustful, the lately widowed, bankrupts, sons and brothers of whores, convicts, the idle, brooders on the unknowable, gluttons, and starvers. The women most liable to spirit attacks are girls, young women who have lately come of age, young widows, idlers, whores, brooders on the unknowable, irregular or gluttonous eaters, and all sickly women. Women are specially liable to spirit attacks during their monthly sickness, during pregnancy, and in childbed; and men, women, and children are all apt to suffer when, dressed in their best, they go to gardens or near wells. Intelligent and educated men and healthy intelligent women are freer than others from spirit attacks' (*BG* xvii. 813).

Demon possession thus accounts for various abnormal states of mind and for the phenomena classed as hysteria. Hence patients, particularly women, suffering in this way require special pro-

tection, or it is necessary to expel the demons by whom they are possessed.

In Cochin, among the Eravallars, if a pregnant woman dreams of dogs, cats, or wild animals coming to attack her, she is believed to be possessed by demons. An exorcist, or 'devil-driver,' is called in, who makes a hideous figure on the ground representing the demon, sings, beats a drum, mutters spells, burns frankincense, and waves round the head of the patient an offering of food for the demon, on receiving which he leaves her (A. K. Iyer, i. 451, 107; Thurston, ii. 73, 214). In the Panjāb, a woman after childbirth is specially liable to the attacks of demons, and has to wear an iron ring, made, if possible, out of an old horse-shoe, and to keep a fire burning near her (PNQ iii. 81). For the same reason, at the puberty rites of a girl, offerings are made to demons (A. K. Iyer, i. 146). The same is the case with people at various crises of their lives, such as the bride and bridegroom, the mourners, and the corpse-bearers at funeral rites. Such persons are protected by various charms and amulets (see CHARMS AND AMULETS [Indian], vol. iii. p. 441 ff.).

(b) *Conciliation by gifts of food, etc.*—Attempts are often made to conciliate demons on such occasions by throwing food for them by the roadside or in the house.

In the Hīmalāya, food is waved round the head of a possessed person and left out on the road by night, any one touching it being liable to spirit attack (PNQ iii. 73). When a birth occurs in the family of a Chitpāvan Brāhman, cooked rice, on which a dough lamp is placed, is laid in a corner of the street (BG xviii. pt. i. 113 f.). When the Reddis of Bijapur disturb the field spirits at the first ploughing, pieces of coco-nut are thrown on each side of the plough track; and at a Brāhman funeral in the Deccan a man carries a winnowing-fan full of coco-kernel which he scatters abroad (ib. xxiii. 147, xviii. pt. i. 149). The Kūki priest, in cases of sickness, prescribes the appropriate victim, and eats its flesh, throwing what he cannot eat as an offering into the jungle (E. T. Dalton, *Descriptive Ethnology of Bengal*, 1872, p. 46).

(c) *Expulsion of spirits by flagellation.*—Especially in the case of attacks of the hysterical kind, the patient is soundly beaten, until the demon speaks through him or her, and promises to depart.

'If the devil should prove an obstinate one and refuse to leave, charm they never so wisely, his retreat may generally be hastened by the vigorous application of a slipper or broom to the shoulders of the possessed person, the operator taking care to use at the same time the most scurrilous language he can think of' (Bishop R. Caldwell, writing of the Tinnevely Shanars, in Ziegenbalg, 164). In the Deccan one plan of scaring a demon is for the exorcist to take the possessed person before an idol, seize him by the top-knot, and scourge and abuse him until the Bhūta says what offering or penance will satisfy him (BG xviii. pt. i. 292). The tortures inflicted on supposed witches and other possessed persons have resulted in death or serious injury (NINQ iii. 202 f.; N. Chevers, *Manual of Medical Jurisprudence for India*, 1870, p. 546 ff.; for further accounts of exorcism by flagellation, see Crooke, i. 99, 155 f., ii. 34; cf. Frazer, *GB*² iii. 127 ff., 215 ff.). In Car Nicobar true ceremonial murders of men, women, and even children have been performed for the public benefit by organized bodies, because the victims are considered dangerous or obnoxious to the community; the murdered persons are charged with possession by an evil spirit as illustrated by their propensity to witchcraft, incendiarism, homicide, failure to cure diseases, or theft; but the root cause is that the victim is believed to be possessed by a demon, and hence dangerous; his limbs are broken, he is strangled, and his corpse is flung into the sea (Sir R. Temple, 210).

(d) *Expulsion of disease spirits.*—The evil spirits most generally feared are those which bring disease. To their agency are attributed epidemics in general, especially cholera, plague, or smallpox, and maladies which are unforeseen or those which indicate spirit possession, such as fits, fever, rheumatism, colic, and the like. Such spirits are often got rid of by transference, the spirit being compelled or induced to remove to another village or to some distant place.

In the Panjāb, if the fever spirit be detected, the officiant goes at night to a graveyard, brings home some earth, lays it near the patient, and next day suspends a string from an acacia tree, on which it is believed that the spirit hangs itself; or a string is wound in seven strands from toe to head of the patient, and then it is tied round the tree, in the hope of conciliating the tree spirit which causes the fever spirit to depart (PNQ i. 40). In Upper Burma, when children fall ill, an egg, some of the child's hair, and some sweetmeats are placed on a little boat and consigned to the river, which carries away the spirit; by a later conception this is supposed to be an offering to the water Nāt or spirit (*Gazetteer*, ii. pt. i. 291; cf. Frazer, *GB*² iii. 97 ff., 105 f.). A very common method is to convey the disease by means of a scape-animal from the infected area. In Berār the cholera spirit is expelled by yoking a plough, and driving it round the village to form a sacred circle, which foreign and hostile spirits cannot pass; a fowl and a goat are sacrificed and buried in the ground, and near them the beam and

plough-yoke are fixed, daubed with red lead, and worshipped; a cart is then dragged containing the image of Mari, the disease goddess, from her shrine, to the village boundary, where the image is worshipped, and a buffalo calf is sacrificed and buried (NINQ iv. 206 f.). In the Telugu country the scape-animal is a buffalo, and, as the image of the goddess is carried in procession, people flourish sticks, swords, or spears, and cut up limes and throw them into the air in order to induce the hungry spirits to seize them and thus be diverted from attacking the man who bears the image (*Bull. Madr. Mus.* v. 180).

7. *Possession by spirits of the exorcist.*—The exorcism of evil spirits by a professional exorcist has been reduced to a system, and prevails widely in all parts of the country, particularly in S. India. In N. India the medium is known as Bhagat (Skr. *bhakti*, 'fervent faith'), Syānā, 'the wise one,' Ojā (Skr. *upādhyāya*, 'teacher'); among the hill tribes of Central India as Baiga, Bhomkā, Parihār, or Demano; in the Deccan as Jantā, 'the knowing one,' or Devrishi, 'holy saint.' He is distinguished from the Mantri, who learns by orthodox methods the charm formulæ (*mantra*) from a teacher (*guru*), by the fact that he does not undergo special training, but works through the inspiration of a familiar spirit or guardian, which enters him when he works himself up into the proper state of ecstasy. This ecstatic state occurs on various occasions and for various purposes. His special province is the expulsion of various kinds of disease; but he also becomes possessed at death rites, when he identifies and announces the pleasure of the spirit, at name-fixing, when he decides the proper name of the child, and at other domestic and religious rites. The medium in his ecstatic state is seized with revolting cramp-like contortions and muscular quivering, head-wagging, and frantic dancing, which usually end in complete or partial insensibility. When Sir C. A. Elliott witnessed a séance, 'the man did not literally revolve; he covered his head well up in his cloth, leaving space over the head for the god to come to; and in this state he twisted and turned himself about rapidly, and soon sank exhausted. Then, from the pit of his stomach, he uttered words which the bystanders interpreted to direct a certain line of conduct for the sick man to pursue. But perhaps the occasion was not a fair test, as the Parihār strongly objected to the presence of an unbeliever, on the pretence that the god was afraid to come before so great a *śākhi* [official]' (*Settlement Rep. Hoshangābād*, 1867, p. 120). Compare the account by Capt. W. L. Samuells, in Dalton, 232 f., quoted above, vol. ii. p. 488 f.

(a) *Tabus imposed upon the medium.*—The medium is subject to numerous tabus.

The god 'would leave his head' if either a cow or a Brāhman attended the rites, thus proving their non-Aryan origin. The Kotā medium must not speak directly to his wife or to any other woman for three months before the rite; he may not sleep on a mat or blanket; at the feast he must have no congress with his wife (Thurston, iv. 101 f.). In the Deccan he loses his power if his lamp goes out while he is eating, and thus leaves him exposed to demon assault; if he happens to hear a menstruous woman speak; if any one sweeps his room; if the name of any spirit is mentioned. Should any such events occur, he must stop eating and fast during the remainder of the day. He must avoid certain vegetables and fruits, and must never eat stale or twice-cooked food. If he be a Musalmān, he must not eat a special kind of millet, or food cooked by a menstruous woman (BG xxiv. 418).

(b) *Methods of identifying spirits by the medium.*—The medium uses varied methods of identifying the spirit which has seized his patient.

In the Panjāb he waves corn over the sick person, and, making a heap for each suspected demon, keeps on dropping grains that on which the last falls indicating the offender (NINQ i. 123). The Berār medium hangs a string over a wood fire and repeats spells; when the smoke touches the string, the appropriate formula is indicated (PNQ ii. 170). The Kāchāri medium lays out thirteen leaves, each assigned to a special god, and, hanging a pendulum from his thumb, lets it move; when it touches a particular leaf, that deity must be propitiated (Dalton, 85). In the Gujārat an officiant tied charmed threads round the house, drove a charmed iron nail into the ground at each corner and two at the door; the house was purified; a Dev, or orthodox god, was installed, and before his image was placed a drawn sword, a lamp lit with butter, and a second lit with oil, while the medium continued to mutter charms for forty-one days, and occasionally visited the cremation ground to make propitiatory offerings to the offended spirit. In another case the spirit was actually expelled, and buried under lime, salt, mustard, lead, and stones, to prevent him from 'walking'; and, as an additional precaution, a charmed iron nail was driven into the

ground. Fumigation of the patient with the smoke of pepper and dogs' dung, as a means of inconveniencing the demon, was also recommended (A. K. Forbes, *Rās Mālā*, p. 657 ff.).

8. Shamanism.—Such methods naturally develop into the practices which have been roughly classified under the head of Shamanism (*q.v.*), though this term is often applied to demonology in general. Bishop Caldwell recognizes various points of contact between the systematized methods of exorcism known as 'devil dancing' and 'devil driving' in S. India and the Shamanism of High Asia: the absence in both of a recognized priesthood; the recognition of a Supreme God to whom, as he is too kindly to do them harm, little worship is offered by the people; the absence of belief in metempsychosis; the objects of Shamanistic worship being not gods, but demons, which are regarded as cruel, revengeful, capricious, and are appeased by blood sacrifices and wild dances; the medium exciting himself to frenzy, and pretending, or supposing himself, to be possessed by the demon to whom worship is being offered, and whilst in this state communicating to those who consult him the information he has received (*Dravid. Gram.*², 1876, p. 580 ff.).

Performances of this kind are uncommon in N. India, except in the Himalāya and among other hill and forest tribes. In Kumaun, when a person believes himself to be possessed by a demon, he calls his friends to dance it away; the dance goes on daily for as long as six months in some cases, and, as an additional precaution, large fires are kept alight (Oakley, 207 f.). When the Garos do devil-driving, it is in the name of their god Kalkamā, who holds in his hands the spirits of men; sacrificial stones are erected to him, and are smeared with the blood of the animal victim (Playfair, 82). The methods in use in S. India, where the system has been more fully elaborated, are of the same kind, and need not be more fully described. The basis of the performance is that the officiants, in dress, weapons, and ornaments, impersonate the demon whom they desire to propitiate and cause to depart. (See illustrations of such performers among the Parāyāns and Panāns of Cochin, in A. K. Iyer, i. 83, 178. Full details will be found in the writings of Bishops Caldwell and Whitehouse already quoted, and in A. O. Burnell, 'The Devil Worship of the Tulavās,' *JA*, 1894.)

Blood-drinking.—The most loathsome incident in these rites is when the medium, in order to bring himself into communion with the deity or demon, and thus gain inspiration, drinks the blood of the sacrificed victim.

The low-caste Mādga who impersonates the demon Viraveśin or Poturāja, 'buffalo king,' kills the sacrificial goat by strangling it with his teeth and tearing the throat open (Oppert, 461, 476). The same rite is performed by other mediums of the same class (*Bull. Madr. Mus.* v. 165 f.; Thurston, iv. 187; A. K. Iyer, i. 311). In N. India similar rites are found among the Tāntrik mediums, as when, at the Bhairava festival in Nepal, a band of masked, yelling devils beset and torture the buffalo victim, drink the blood, and eat pieces of the raw, bleeding flesh (*PNQ* iii. 165; cf. the account in H. A. Oldfield, *Sketches from Nepal*, 1880, ii. 345 ff.). In some cases in S. India the victim is slightly wounded, and forced to eat rice soaked in its own blood; if it eats, the omen is good, but in any case the victim is slain (*Bull. Madr. Mus.* v. 173). The blood is used as a charm, as at Trichinopoly, where clothes soaked in it are hung on the eaves of the houses to protect the cattle from disease; or it is smeared on the doorposts of the shrine, or collected in a vessel and laid before the goddess for her refreshment (*ib.* v. 173, 141, 163).

9. Worship of Guardians.—Particularly in S. India, the chief reliance for protection against demons is placed in the Guardians. These are, first, the Grāmādevatā, or local village-deities; secondly, the leaders of the hosts of evil spirits, who, by appropriate conciliation, can be induced to keep their demon bands under control, and prevent them from doing injury to mankind.

(a) *The Grāmādevatā.*—The Grāmādevatā, 'gods of the village,' or, as they are called in N. India, the Dihvār (with the same meaning), are generally non-human spirits, though their ranks are sometimes recruited from those of human origin. They are often identified with the Earth Mother or with the wider host of Mothers (Mātā), the worship of whom prevails widely in W. India. (For Mother-worship, see A. Barth, *Religions of India*, 1882, p. 202 n.; Bishop Whitehouse, in *Bull. Madr. Mus.* v. 116 ff.; Monier-Williams, *Brahmanism and Hinduism*⁴, 1891, p. 225 ff.) The connexion of this worship of the female powers with the matriarchate is not clearly established in India. But women are generally supposed to be more susceptible than men to spirit influence, and are mysterious beings charged with supernatural energy (Westermarck, i. 629, 665 ff.). Hence we find women participating in demon propitia-

tion. The Orāons believe that women, known as Bisahi, control the terrible Bhūta known as Dāyan. The woman who desires to acquire this power strips off her clothes (see above, vol. iii. p. 447), wears a girdle of broken twigs taken from a broom, and goes to a cave, the resort of the Dāyan. There she learns spells (*mantra*), and at each séance puts a stone into a hole. If at the end of a year the hole is full, she has become an expert, and can take away life and restore it. If the hole be only partially full, she has the power only of taking away life. Every year she is obliged to sacrifice a black cat and pour its blood into the hole. She and the Dāyan alone can set the Bhūta in action, and to these all diseases are attributed. When a child dies, any Bisahi in the village is charged with causing the death (*MAB* 1. 144).

As examples of these village guardians we have Chaṇḍkī or Chaṇḍkāī, the low-caste Hindu guardian in the Deccan, who lives in marshes and attacks children. To appease her an image is made of earth taken from the banks of a river; offerings are made to it, and it is finally thrown into water (*BG* xxiv. 416). The field guardian of the Reddis of Bijapur lives in a stone under a sacred tree, which is smeared with red lead, and offerings are made before beginning ploughing (*ib.* xxiii. 147). Darhā is the guardian of the Birhōrs of Bengal, and is represented by a piece of bamboo stuck slantwise into the ground (Risley, i. 138). Naturally such village guardians are often embodied in the boundary stone. The chief object of worship of the Dāngs of Khāndesh is Simariā Dev, the boundary god, the Sewariyā of the Bhuiyārs (*BG* xii. 601; Crooke, *TC* ii. 93). The worship of boundaries (*śimanta-pūjā*) is part of the orthodox marriage rite (*BG* xviii. pt. i. 129). In Tanjore the Ellai-kal, or boundary stone, is the subject of remarkable worship (*Bull. Madr. Mus.* v. 117 f., 168 f.).

(b) *The demon Guardians.*—In S. India the chief of these is Aiyānār, 'honourable father,' or, as he is also called, Śāstra or Śāstra, 'ruler' (Oppert, 505). Mounted on a horse or elephant, he rides sword in hand over hill and dale to clear the land from evil spirits; any one who meets him and his demon troop dies at once; when he is not riding, he appears as a red-coloured man, wearing a crown, with lines of sacred ashes (*vīṭhūti*) on his forehead, and richly dressed; he has two wives, Pūranāl and Pudukalāi, who are worshipped with him (Oppert, 505; *Bull. Madr. Mus.* v. 118; A. K. Iyer, i. 312 f.). In the Himalāya the demons go about on horses, in litters, or on foot, led by Bho-lanāth; death seizes any one meeting them; Airi patrols the land with his dogs (*JASB*, 1848, p. 609; Crooke, i. 262 f., 280; cf. the European legend of the Wild Huntsman, the Orion of Greek legend, Wuotan of Germany [Frazer, *Pausan.* v. 82; Grimm, iii. 918 ff., 941 f.]).

The Deccan guardian is Vetāla, who also appears as a goblin tenanting dead bodies (see the *Vetāla-pañchavāṇatikā* included in Somadeva, *Kathā-sarīt-sāgara*, tr. C. H. Tawney; and Sir R. Burton, *Vikram and the Vampire*, 1870). He is represented in human form, but his hands and feet are turned backwards, his eyes tawny green, his hair standing on end; he holds a cane in his right hand and a conch-shell in his left; when he goes his rounds, he is dressed in green, and sits in a litter or rides a horse, while his attendants follow, holding lighted torches and shouting (*BG* xviii. pt. i. 291, xxiv. 415). In the villages, as a guardian, he occupies a stone smeared with red paint, the top roughly carved into a man's face; but more usually he resides in the pre-historic stone circles scattered over the hills, the centre stone representing the demon, and the surrounding pillars his attendants (*ib.* xviii. pt. i. 291, 553, pt. iii. 347, 388, xxiv. 415).

Like him is Bhairava or Bhairon, who seems to be in origin an old earth-god, the consort of the Mother. In his form as Kāl Bhairava he cures diseases caused by demons (*ib.* xi. 461, xiv. 73, xviii. pt. i. 289). As Bahiroba he is widely revered, and the Dhāngars of Sātara bury his image with the rich men of the tribe to protect them from evil spirits (*ib.* xi. 461, xiv. 73, xix. 105).

In N. India, where the belief in demons is less intense, the local village-deities, and, in particular, Hanumān, the monkey-god, are installed as guardians at the foundation of every settlement.

10. Periodical or occasional expulsion of evil spirits.—The periodical or occasional expulsion of evil spirits is as common among many Indian tribes as it is among other primitive races (Frazer, *GB*² iii. 39 ff.).

This is often done at the close of the harvest season, which is regarded as a period of licence. About harvest time the Karenzi of Upper Burma take a piece of smouldering wood from the house fire, place it on a bamboo, and carry it ceremonially outside the village; they are unable or unwilling to explain the object of the rite, but they say that it keeps off fever and other sickness from the house (*Gazetteer*, i. pt. i. 630). Among the Taungthas of the E. frontier there is a general cleaning up of the village after an epidemic, the place being surrounded with a cordon of fresh-spun white threads, and the blood of sacrificed animals scattered (T. H. Lewin, *Wild Races of S.E. India*, 1870, p. 196 f.). The people of Lower Burma expel the cholera demon by scrambling on the house roofs, laying about them with bamboos and billets of wood, drum-beating, trumpet-blowing, yells, and screams (O. J. F. Forbes, *British Burma*, 1878, p. 233; Shway Yoe, *The Burman*, 1882, ii. 105 ff.). Similar harvest-rites are found among the Ho and Mundari tribes in Bengal and those of the N.W. frontier (Dalton, 196 f.; J. Bid-dulph, *Tribes of the Hindoo Koosh*, 1880, p. 103). At the annual

Malers feast the priest scatters rice; all persons supposed to be possessed with devils scramble for it, and are finally cured by drinking the blood of a sacrificed buffalo (Dalton, 270). The Kandhs practise a similar rite at seed-time (W. Macpherson, *Memorials of Service*, 1865, p. 357f.). In Bengal, during the Holi spring festival, people light torches and fling them over the boundary of the next village, the custom often giving rise to riots (*PNQ* iv. 201). Even among many of the higher castes, like the Prabhis of Bombay, in order to expel evil spirits at a marriage, a servant rises early and sweeps the house, gathers the sweepings into a basket, lays on it an old broom, a light, some betel, and four copper coins, and waving the basket before each room says: 'May evil go, and Bali's kingdom come!' She then drives the master of the house to the door, and, warning him not to look back, places the sweepings on the roadside and brings back the coins (*BG* xviii. pt. i. 252f.). In Upper India the Divāli, or feast of lights, is the occasion for observances of the same kind, the lamps scaring demons, and a regular rite of scaring poverty or ill-luck from the house being performed (*JA* xxxii. [1903] 237ff.; *NINQ* v. 125; Crooke, ii. 188f., 295f.). Often these rites take the form of a mock combat or a tug of war, in which one party represents the good, and the other the evil, spirits, arrangements being made that the former shall be victorious. The Burmese Nāts are propitiated by a tug of war, the victorious side being supposed to get better crops; and if, after the contest, rain happens to fall, the efficacy of the appeal is placed beyond question; this is also done in seasons of drought (*Gazetteer Upper Burma*, ii. pt. ii. 95, 279, iii. pt. ii. 64). Among the Aos of Assam, at a festival held in August, there are tugs of war lasting for three days between the young men and unmarried girls of each clan (*kheh*) (E. A. Gait, *Census Rep. Assam*, 1891, i. 244). In Ahmadnagar, in April-May, the boys of one village fight with slings and stones against those of another; it is believed that the non-observance of the rite causes failure of rain, or, if rain falls, a plague of field rats; a fight duly waged is followed by plentiful rainfall (*BG* xvii. 723f.; cf. the Greek *Λιββαλία* and *αἰσχρολογία* [Farnell, *CVS* iii. 93, 99; J. E. Harrison, *Prolegomena*, 1903, p. 155; Crooke, ii. 320f.]).

11. Gaining control of a demon.—In the rites of Black Magic, a demon, if he can be brought under the control of a medium or magician, plays an important part; he may be used as a protector by his master, or his owner may let him loose to work mischief on those whom he desires to injure. The magician, by the use of spells (*mantra*), can often induce him to enter some receptacle, and he thus becomes a marketable commodity.

'When the sale of a Bhūt has been arranged, the Ojhā hands over a corked bamboo cylinder which is supposed to contain him. This is taken to the place, usually a tree, where it is intended that he should in future reside; a small ceremony is performed, liquor being poured on the ground, or small mounds (*piṇḍā*) erected in his honour, and the cork is then taken out, whereupon the Bhūt is supposed to take up his abode in the place chosen for him. His function is to watch the crops and guard them from thieves, and, if any one should be hardy enough to steal from a field thus guarded, he is certain to be stricken by the Bhūt, and in a few days will sicken and die' (E. A. Gait, *Census Rep. Bengal*, 1901, i. 198). Among the Pulluvans of Madras, 'a man who wishes to bring a demon under his control must bathe in the morning for forty-one days, and cook his own meals. He should have no association with his wife, and be free from all pollution. Every night, after 10 o'clock, he should bathe in a tank or river, and stand naked up to the loins in water, while praying to the god whom he wishes to propitiate, in the words: "I offer thee my prayers, so that thou mayst bless me with what I want." These, with his thoughts concentrated on the deity, he should utter 101, 1001, and 100,001 times during the period. Should he do this, in spite of all obstacles, and intimidation by the demons, the god will grant his desires' (Thurston, vi. 231). In Mysore, among the Hasulas and Maleyas, jungle tribes, when a man dies, his spirit is supposed to be stolen by some one else's devil, who is pointed out by the astrologer, who divines by throwing cowrie-shells or rice. The heir, then, as a measure of precaution, redeems the spirit by offering a pig, fowl, or other gift; and he promptly shuts it up in a pot, where it is periodically supplied with drink and food to prevent it from 'walking' and doing mischief (B. L. Rice, *Mysore*, 1897, i. 214; cf. 'The Fisherman and the Jinni,' Sir R. Burton, *Arabian Nights*, 1893, i. 34ff.; *PNQ* ii. 170). The power of a demon is believed to rest in his hair, and, if a man can succeed in cutting off the topknot of a Bhūt, the latter will be his slave for life (*NINQ* iii. 180). In Travancore, Kutich-chāttan, the boy imp, if fed, watches the property of his owner; the master of such a demon possesses infinite powers of evil; but these, if wrongly exercised, recoil upon him, and cause him to die childless and after terrible physical and mental agony (N. Subrahmaniyā Aiyar, *Census Rep.*, 1901, i. 303). Siddharājā, the great Chalukya king of W. India, is said to have performed his acts of heroism by aid of a demon which he subdued by riding a corpse in a cemetery (*BG* i. pt. i. 174).

12. Relation of demonology to orthodox religion.—From Vedic times the gods ever war against the demons (A. Macdonell, 156ff.). Kṛṣṇa slays the demoness Pūtānā; Trīvartta, the whirlwind demon; Arīṣṭa, the bull demon; Keśin,

the horse demon (F. S. Growse, *Mathura*², 1883, pp. 55, 62). Many gods and goddesses take their cult-titles from their conquest of demons; Devī as Mahiṣa-mardini, Indra as Vṛtrahan, Viṣṇu as Kaiṭabhajit and Madhusūdana. The scenes of these ghostly combats are still shown, like the gloomy cave at Yān in Kanara, whence Śiva dislodged the demon occupant; the water which flows from hot springs is the blood of the Rākṣasas slain by some deity, or such wells are the haunts of demons which, if not conciliated, bring disease (*BG* xv. pt. ii. 355, xiv. 373; L. A. Waddell, *Among the Himalayas*, 1899, p. 203). This opposition between the worker by magical arts and the priest who works by the aid of the gods is one of the primary facts of Hinduism (Sir A. C. Lyall, *Asiatic Studies*², 1907, i. 101ff.). Even among some of the forest tribes the supremacy of the god over the demon is admitted; but, as already stated, no clear distinction can be drawn between god and demon. The Orāons believe that their tutelary deity, Pāt, controls all the Bhūts, except the Dāyan; and the Kānnikans of Madras will not worship the demon Chāthan at Cranganore because he is a rival of the local orthodox god (*MASB*, 1906, i. 142; A. K. Iyer, i. 143).

But, as a matter of fact, this opposition between demonolatry and the orthodox religion is little more than nominal, and popular Hinduism consists of a veneer of the higher beliefs overlying demon-worship, the latter being so closely combined with the former that it is now impossible to discriminate the rival elements. This combination is especially apparent in S. India, where Brāhmanism appeared at a comparatively recent period and was forced to come to terms with the local Dravidian beliefs. In particular, in the Tamil districts, the demon cultus has been elaborated under Brāhman guidance, as is shown by the ceremonial washing of demon images, elaborate processions in their honour, and other forms of an advanced species of worship. While the original Grāmadevatā are, as a rule, female, here their male consorts tend to acquire a more prominent position. Aiyānār, for instance, has become entirely independent, occupies a shrine of his own, and has a special festival, and sacrifices are made to his attendants, Maduraiviran and Mūn-adian. As a concession to Brāhman feeling, blood sacrifices are falling into abeyance, and, when these are offered to a goddess, she is often veiled, and a curtain is drawn during the blood-sacrifice to Aiyānār, or the offering is made not to him but to one of his attendants (Bishop Whitehead, *Bull. Madr. Mus.* v. 160). In some places Brāhmans are beginning to act as priests to the village goddesses; but the slaying of victims is left in charge of the low-caste priests; and Brāhmans who serve in village shrines are regarded, among their own body, as holding a distinctly lower position than those who are engaged in secular pursuits (*ib.* 127f.). The fusion of the two faiths usually manifests itself in the acceptance by the orthodox gods of the demons as their followers or assistants. This is particularly noticeable in the Śākta and Śaiva cultus, Vaiṣṇavism having little sympathy with the cruder rites of demonism. The village goddesses tend to become Śaktis, or manifestations of the female energy of Nature; Śiva himself has, as one of his cult-titles, Bhūteśvara or Bhūteśa, 'lord of demons'; his son Gaṇeśa or Gaṇpatī takes his name as lord of his father's attendant demons (*gaṇa*); in the Karnatak, Aiyānār is identified with Harihara, a duplex figure embodying Śiva and Viṣṇu.

The corrupt Mahāyāna form of Buddhism current in Tibet and the Hīmalāya has largely adopted Shamanistic beliefs, drawn from the Animistic devil-dancing cults of the Bön, resembling in many

ways the Taoism of China, and reinforced from Indian Tāntrik beliefs (L. A. Waddell, *Buddhism of Tibet*, 1895, pp. 19, 34, 477; Sir H. Yule, *Marco Polo*, 1871, ii. 61 f.).

This process of the absorption of demonology by orthodox Hinduism naturally results in the decrease of the former, as intelligence, education, and the active missionary efforts of the orthodox priesthood extend. This is admitted by several native writers. One, speaking of Bengal, states that the numbers of the Bhūts have largely been reduced; fifty years ago there were as many millions of demons as there are men at the present time; characteristically, he seems to attribute this reduction in numbers to the facilities now offered by railways of visiting Gaya and other places for the purpose of performing the obsequial rites which appease the angry spirits of the dead (*NINQ* iii. 199). From Bombay we learn that in Kolhapur some of the most dreaded evil spirits have recently disappeared—the Brāhman ghosts having left the country because they dislike the cow-killing permitted by the British Government; the Muhammadan demons because pork is now freely eaten; only the low-caste spirits are left, and their influence has become much reduced (*BG* xxiv. 421). Even in Cochin and Travancore, the homes of demon-worship, it is said to be gradually giving way to Hinduism, as represented by the cults of Śiva, Subrahmanya, and Gaṇpati or Gaṇeśa (A. K. Iyer, i. 311).

LITERATURE.—The cults of the demons and evil spirits of India have been as yet imperfectly studied, because many of these rites are repulsive, and performed in secret, and thus do not readily come under the observation of Europeans, while they are offensive to many students of Hinduism belonging to the higher and learned classes. The material, which is of great extent and complexity, is scattered through the anthropological literature of India, some of which has been quoted in the course of this article. It is most abundant in S. India. Much information will be found in the *Census Reports*; the *Manual of the Administration of the Madras Presidency*, 1885-93; the *Bulletins of the Madras Museum*; the *District Manuals*, esp. that by W. Logan on *Malabar*, 1887; general treatises, such as E. Thurston, *Castes and Tribes of S. India*, 1909; V. N. Aiyar, *Travancore State Manual*, 1908; B. L. Rice, *Mysore*, 1897; F. Buchanan, *A Journey through Mysore, Canara, and Malabar*, 1807; L. K. Anantha Krishna Iyer, *The Cochin Tribes and Castes*, vol. i. (all published), 1909; P. Percival, *The Land of the Veda*, 1854; S. Mateer, *The Land of Charity*, 1871; R. Caldwell, *Compar. Gram. of the Dravidian or South-Indian Family of Languages*, 1875, in which and in B. Ziegenbalg, *Genealogy of the South-Indian Gods*, 1869, the work of the former writer on the Śāṇārs of Tinnevely is reproduced; G. Oppert, *The Original Inhabitants of Bharatavarsa or India*, 1893; Sir M. Monier-Williams, *Brahmanism and Hinduism*, 4, 1891; in A. K. Forbes, *Rās Malā*, 1878, is reproduced the *Bhūt Nibandh* or *the Destroyer of Superstitions regarding Daimons*, by Trivedi Dāpatrām Dāyā, issued in an Eng. tr. in 1850. To these may be added special monographs, such as P. Dehon, S.J., 'Religion and Customs of the Uraons,' in *Mem. As. Soc. Bengal*, i. (1900); A. C. Burnell, *The Devil Worship of the Tulavas*, reprinted from *IA*, 1894; H. Whitehead, 'The Village Deities of Southern India,' in *Bull. Madr. Mus.* v. (1907); M. J. Walhouse, 'On the Belief in Bhūtas—Devil and Ghost Worship in Western India,' in *JAI* v. (1876) 408.

W. CROOKE.

DEMONS AND SPIRITS (Jain).—Superhuman beings, according to the Jains, fall into two categories—the denizens of hell (*nārakas*), and the gods (*devas*). A sub-division of the latter distinguishes good and bad gods (*dāivi*, and *āsuri gati*); the bad gods are also spoken of as *kudevas* or *kadamaras*. Demons would come under the two heads *nārakas* and *kudevas*, and ghosts under that of *kudevas*. It must, however, be kept in mind that, according to the Jains, neither the state of a god nor that of a demon is permanent, but both have their individually fixed duration, which may extend to many 'oceans of years.' The state which a soul may attain in the scale of beings and the duration of this state—his individual lot—depend on the merits and demerits (*karma*) of the soul; when the allotted time is over, the soul will be re-born in some other state according to his *karma*.

A god may be re-born as a hell-being, but the latter will be re-born as an animal or a man only.

The *nārakas*, or hell-beings, have a demoniacal nature, but they cannot leave the place where they are condemned to live, nor can they do harm to any other beings than their fellow *nārakas*. The souls of those who have committed heinous sins are on death removed in a few moments (see **DEATH AND DISPOSAL OF THE DEAD (Jain)**) to one of the seven nether worlds which contain the different hells (see **COSMOGONY AND COSMOLOGY (Jain)**, § 4). There the soul of the condemned is fitted out with an enormous body of a loathsome shape comparable to that of a plucked fowl. The hell-beings possess superhuman mental powers (*avadhi*); they avail them, however, only to find out their enemies and to fight each other. In addition to the pains produced by the wounds they inflict on one another and by the tortures they have to undergo in some hells, the hell-beings continually suffer from extreme heat or cold, the intolerable stink, and the horrid sounds which prevail in the hells, and they can never appease their hunger and thirst. The *nārakas* do not die, however much they are mangled; but their wounds close at once like a furrow in water. They die at their allotted time after a miserable life, which may extend, in the lowest hell, to 33 oceans of years.

The remaining demons and the ghosts are contained in the two lowest sub-divisions of the gods: the *bhavanavāsins* or *bhaumeyakas*, and the *vyantaras*. The lowest class of the *bhavanavāsins* (i.e. gods who live in palaces) are the *asurakumāras* or simply *asuras*. They reside in mansions of their own below the surface of the earth, in the upper half of *Ratnaprabhā*, the highest of the seven nether worlds. As in Hindu mythology, the *asuras* may be good or bad; but there are fifteen extremely wicked *asuras*—Ambariṣa, etc.—who administer tortures in the three uppermost hells; in a former life they had delighted in wanton cruelty. The remaining classes of *bhavanavāsins*, *nāgas*, etc., seem to be demi-gods rather than demons.

The *vyantaras* include demons, goblins, ghosts, and spirits, who live on, above, or below the earth. They are divided into eight classes, viz. *kinmaras*, *kimpuruṣas*, *mahoragas*, *gandharvas*, *yakṣas*, *rākṣasas*, *bhūtas*, and *piśāchas*, all of which occur almost identically in Hindu mythology. The last four classes contain demons and ghosts, but they are not demoniacal as a whole. There are even among the *rākṣasas* good ones, adorers of the *tīrthakaras*, who may take *dikṣā*, etc. In narratives the demoniacal character is usually indicated by an epithet, e.g. *duṣṭa-vyantara*. Generally speaking, the notions of the Jains on demons, ghosts, etc., are very much the same as those of the other Hindus; but the position of the superhuman beings has been, in many regards, altered by the efforts of the Jains to introduce systematical order into the mythological conceptions current at the time when their religious teachings were reduced to a definite form.

DRAMA (Jewish).—Dramatic literature among the Hebrews, as among all Semitic peoples, was scanty. Attempts have indeed been made to interpret the song of Moses (Dt 32¹⁻⁴³), the song of Miriam (Ex 15²⁰⁻²¹), and, above all, the Song of Songs (cf. *HDB*, s.v.), as dramatic; but these endeavours have been unsuccessful. Nor is the Book of Job a drama in any true sense of the term. Whatever the Jews accomplished in the drama was, and is, due to imitations from the Indo-Germanic races with whom they have come in contact. The earliest Jewish play dates from the 2nd cent. B.C., when Ezekiel of Alexandria attempted to dramatize the events of the Exodus. Fragments of his play have been preserved by Clem. Alex. (*Strom.* i. 23, 155) and Eusebius (*Praep. Evang.* ix. 29); and Schürer (*GPV*³ iii. 373-376) believes that this drama was intended for the stage, although it is difficult to imagine its production. In Ezekiel's work the influence of the spirit of Euripides is evident, and his object seems to have been not only to instruct the Alexandrine Jews in Biblical history, but also to wean them away from Gentile plays.

The general attitude of the Jews, however, towards the drama was extremely hostile, in conformity with their policy of self-imposed isolation, and their bitterness was increased by their hatred of the Romans and their suspicion of the Greeks. It was not until the middle of the 17th cent. that the increased scope allowed to Jews gave rise to a Neo-Hebrew drama, modelled, of course, upon the theatre of the Christians by whom they were surrounded. The first of these plays was the *Yesodh 'Olam*, by Moses Zacuto, a Marano, or renegade crypto-Jew, of Amsterdam, and its theme is the Talmudic legend of Abraham's destruction of his father's idols. The plots of the Neo-Hebrew drama are either religious or ethical, as in the *Asire ha-Tikkoth* of Joseph ben-Isaac Penzo (Amsterdam, 1673) and the *La-Yesharim Tehillah* of Moses Hayyim Luzzato (Amsterdam, 1743), the former play having as its theme the attempts of Understanding, Providence, and an angel to lead back to the path of rectitude a king distracted, against his will, by his impulses, his wife, and Satan; while the latter drama is an allegory designed to show the victory of truth over falsehood. No fewer than forty-six Neo-Hebrew plays are enumerated by Seligsohn, the majority of them based on Biblical or ethical themes.

Many foreign plays have also been translated into Hebrew, including, for instance, the *Gemul 'Athalyah* of David Franco-Mendes—an adaptation from Racine and Metastasio (Amsterdam, 1770)—and versions of Racine's *Esther*, Schiller's *Die Räuber*, Lessing's *Nathan der Weise* and *Die Juden*, and Shakespeare's *Othello*, *Romeo and Juliet*, and *Macbeth*. The Yiddish dramatists are active, and many great cities support one or more Yiddish theatres which cater to the Jewish population. These plays are, however, for the most part translations or adaptations of dramas by non-Jewish authors. The Jewish drama must, therefore, be regarded merely as a literary parasite; even its apparently original productions are really copied from Indo-Germanic sources.

LOUIS H. GRAY.

DRAMA (Persian).—The drama of Persia is both scanty and late, due in part, at least, to Muhammadan rule, which has never been favourable to the development of this art, reflecting herein the dramatic poverty of the entire Semitic race. There are, however, two categories of Persian plays, exclusive of the marionettes or shadow-plays (*karagöz*), which are of Turkish origin. The native Persian drama, then, may be divided into comedies (*tamāsa*) and mysteries (*ta'ziya*, lit. 'consolation, condolence'). The comedies are, for the most part, improvised by *lūfīs*, or itinerant buffoons, and offer little of interest. It is very different, however, with the *ta'ziya*, which is the most striking mystery-play of the entire Orient, and possesses a sway over the Shi'ite Persians comparable with that of the Passion-Play of Oberammergau over Christians. The individual *ta'ziyas* are comparatively short, and are concerned entirely with religious subjects, especially with the martyrdom of Hasan and Husain, the sons of 'Alī, who was the first cousin of Muhammad and the husband of the Prophet's youngest daughter Fatima. 'Alī, the rightful successor of Muhammad, was rejected in favour of Abū Bakr at the instigation of 'A'isha, and was later assassinated, while Hasan's own wife poisoned him in obedience to the Sunnite Muawiyah, and Husain was later slain in battle with the adherents of the rival sect. The Persians, being Shi'ites, have accordingly adopted Hasan and Husain as martyrs of the faith, and commemorate their death annually during the first ten days of the month of al-Muharram. In each house that can afford it a place is constructed for the representation of the mystery, and on the side towards Mecca is set the model of the tombs of the martyred Hasan and Husain. The actors of the drama are not specially trained for the purpose, but their deep religious feeling, and their regard for their performance as for a sacred duty, lend a power to the presentation which works the audience into a frenzy and renders it necessary to provide for the safety of the hated Sunnites whom they may meet as they go in procession through the streets. These processions occur especially on the fifth, seventh, and tenth days of al-Muharram, the most important being the two last, symbolizing respectively the marriage of Kasim with Fatima and the death of Husain. The concluding day is often marked by bloody conflicts between the Shi'ites and Sunnites.

Dramatically the mystery-play of Hasan and Husain, which is essentially a series of *ta'ziyas*, is rude but effective, gaining strength from the very popularity and vulgarity of its style. Its length is prodigious, and the unities of time, place, and even action are set at defiance. The author of the play as a whole or of its parts is unknown, and it is doubtless a product of the people, revised and altered according to need by those who act it, rather than a definite dramatic work. The number of *ta'ziyas* composing it varies, but it would seem that the play is of comparatively recent development, possibly as late as the beginning of the 19th century. As an independently developed Passion-Play, untouched, apparently, by non-Persian influence, the drama of Hasan and Husain is one of the most remarkable dramaturgic creations in the history of the religious stage.

DRAMA (Polynesian).—Among the Polynesians, rudiments of the drama may be traced. While these embryo plays were often comic in character and analogous to the early Roman *fabulae Atellanæ*, particularly in Raiatea (Cook, *Voyage towards the South Pole and round the World*, London, 1777, i. 173-176), they were evidently derived ultimately from religious sources. This is distinctly affirmed by Moerenhout (*Voyages aux îles du Grand Océan*, Paris, 1837, i. 133-134), who states that the dramas were presented under the auspices of the *Arii*, while the plays themselves were devoted to the description of the two principles, Taaroa and the matter with which he unites, the creation of the universe, the gods, elements, spirits, plants, and other productions of the earth; then the life of the demi-gods or heroes, their journeys, combats, and the like; then love-themes, dialogues between lovers (laments, quarrels, true comedy-scenes); and the presentations invariably ended in dances. It is also noteworthy that, according to the same traveller, the 'musicians, singers, and declaimers' at these plays had an orchestra slightly elevated above the rest, while the 'actors or dancers' occupied a special place before or in a house. It would therefore seem that the function of the Polynesian actor was primarily that of the mimetic dancer, the words being supplied by separate reciters, a proceeding for which parallels may be found elsewhere, as among the Javanese. The religious basis of the Polynesian drama receives an additional confirmation in the fact that plays were also presented in connexion with funerals.

LOUIS H. GRAY.

DRAMA (Roman).—**I. Native Italic drama.**—

The Roman critics were deeply interested in the Italic beginnings of their drama, and investigations of the subject seem to have begun as early as the time of Accius (c. 100 B.C.). Two generations later the whole subject was taken up and examined anew by Varro, notably in his lost *Origines Scenicarum*. His views, so far as they survive, are found in the treatises of Diomedes and Donatus *de Comædia*. The intermediary was probably Suetonius. Apart from scattered references in various authors, we also have Horace (*Epist.* ii. 1. 139 ff.) and Livy (vii. 2). It is quite clear, however, that the Roman critics discovered nothing very definite.¹ This is shown by their lack of agreement on any given point, by their inconsistencies and incredible combinations; above all, by their frequent appeals to etymology, that last resort of the desperate investigator. It is impossible, for example, to reconcile Livy's famous account with facts, probabilities, or even possibilities. Jahn saw that it was the result of ætiology and of mere philological 'combinations'; Leo pointed out that there was a more than suspicious parallelism with Aristotle's *περί κωμῶν*, the standard work on the origins of the drama at this time; Hendrickson² followed and elaborated Leo by showing that Livy goes back to Accius—perhaps by way of some Annalist (Valerius Antias?). Horace's account adds something to Livy's, but seems to have been derived more or less indirectly from the same source. Varro, as Hendrickson

¹ For the remains of antique discussion and criticism of the drama, see esp. G. Kaibel, *Comicæ Græcor. Frag.*, Berlin, 1899, vol. i. 1, p. 3 f. For the early period of the Roman drama the most important literature is cited by Schanz, *Röm. Literatur*, i. i., 1898, par. 9.

² 'The Dramatic Satira and the Old Comedy at Rome,' *AJP* xv. [1894] 1-30. For Jahn, see *Hermes*, ii. [1867] 225; and for Leo, *ib.* xxiv. [1889] 67.

shows, was inclined to distrust the earlier (Accian?) account, and appears to have concluded that the Italic origins were a *terra incognita*.

Such were the views of the greatest Roman scholar; and, on the whole, we are still constrained to agree with them. Neither for him, however, nor for us do they preclude the existence of a native Italic drama in the wider sense. The Romans, like the Greeks, were gifted with a keen dramatic instinct and a large modicum of the mimetic faculty.

The liturgies of the Salii and of the Arval Brothers, the *carmina triumphalia*, the *versus Fescennini*, the songs of beggars and of shepherds—all indicate clearly enough that the temperament which is responsible for the modern *Commedia dell'Arte* is the same as that which greets us at the very dawn of history on the Italian Peninsula. Irrespective of the character and credibility of the testimony offered by the Roman critics, we may safely agree with Mommsen—and so far as the present discussion is concerned this is quite sufficient—that the simplest elements of the mimetic art were in Latium and Hellas altogether the same. The dance (*triumphus*, *θραμβος*, *δούραμβος*), the use of masks or their equivalent, the accompaniment of the pipe, the rude songs ceremonially abusive and obscene (to avert the evil eye, as the *carmina triumphalia*, and the *versus Fescennini* at weddings), the wearing of the phallus for the same purpose—all in honour of the gods and associated from the first with rustic festivals—this protoplasm of the drama, to which Horace gives the indefinite name of *Fescennina licentia*, may be assumed for Italy quite as much as for Greece. In fact, if *Fescenninus* in this connexion (*Fescenninus versus*) is to be derived from *fascinum*, *Fescenninus* literally = *φαλλικός*, and the parallelism is complete between *Fescennina licentia* and *τὰ φαλλικά*, the phallic verses characterizing Aristotle's first division of the Comedy. The derivation from Fescennium (another antique theory) might have been suggested, though this is more than doubtful, by a trustworthy tradition that this old Latin town, so long under the influence of Etruria, was a centre of the worship referred to.

It is neither possible here nor necessary to discuss the vexed and vexing question of the dramatic *satura*, the name given by Livy to a play with a more or less amorphous plot and rude improvised dialogue assumed by his authority as the second stage in the development of dramatic art on Latin soil. It is not unlikely *per se* that a play of the type described did develop in Latium as it did in Greece, but, if *satura* is the traditional name of such a play instead of being (as Hendrickson suggests) merely a later invention, we should agree that the word was a corrupted form of *σάτυρος*, and look to Southern Italy for its ultimate origin.

However that may be, it is fairly certain that the Romans were affected at an early period by the Dorian comedy of their neighbours to the South. This is shown by Bethé's investigations,¹ and is in harmony with Livy's statement (vii. 2), under the year 364 B.C., that *histrion* is an Etruscan word, and that the artistic beginning of the drama came from Etruria. This means ultimately Magna Græcia, for in such matters Etruscan influence was Greek influence at second hand. Etruria was not creative in the sphere of art, it was not even a first class imitator; but it was a good purveyor.

2. The 'Palliata.'—Let us turn, however, from the crude beginnings of mimetic art, Italic or otherwise, to a brief consideration of the Roman drama as a literary production. From this point of view the Roman critics, especially after Varro, agreed that the first definite event in the history

¹ *Proleg. zur Gesch. des Theaters im Alterthum*, Leipzig, 1896.

of the department was associated with the year 240 B.C. The long war with Carthage had just been brought to a successful termination, and it is a matter of record that, in order to indicate its especial gratitude for Divine protection, the Government, among other things, commissioned the Greek freedman Livius Andronicus to enlarge the usual scope of the *Ludi Romani* by the presentation of two plays, a comedy and a tragedy, translated, or, more properly speaking, adapted from the Greek for a Roman audience. For the one he resorted to the New Comedy, which, being both contemporary and cosmopolitan, was best fitted to reach the hearts of another nationality; for the other he had a large body of old favourites from which to choose. The experiment was eminently successful, and it is characteristic of Roman conservatism, especially in connexion with any religious rite, that the types thus established were in certain respects rigidly adhered to. The *Comœdia Palliata* (from *pallium*, a Greek soldier's cloak) is always the adaptation of a play from the sphere of the New or occasionally (as perhaps in the case of the *Amphitruo*) of the Middle Comedy; the scene, the characters, and, as the name indicates, the costumes, are all Greek. The Greek atmosphere is not always consistently preserved, especially in Plautus; but even here, though the man lived and wrote during and immediately after the blazing excitement of the Second Punic War, deviations are for the most part unimportant and, so to speak, accidental. Comparison, however, with fragments of the Greek originals, wherever available, shows that the poet treated his exemplar with great freedom, both in content and in form, changing what was originally a dialogue in trimeters into the lyric measures of a *canticum*, abridging here, expanding there, and otherwise manipulating his text to suit his taste and that of his Roman audience. Frequently, too, he enlivened the action of his play by constructing an underplot from a certain number of scenes supplied by a second Greek exemplar. This process was technically known as *contaminatio*. On the whole, however, the *Palliata* is a faithful representation of the New Comedy of Greece. Indeed, owing to the loss of all complete originals, it is our only representative. The characteristics of this comedy of manners, or, as Ben Jonson would say, of 'humours,' are familiar to all.

The popularity of the *Palliata* and the creative period of its existence belong in round numbers to the century lying between 240 and 140 B.C. The names of at least twelve comic dramatists belonging to this period are known, and the number of *Palliatae* written by them must have been not less than four hundred. We now have the six plays of Terence and twenty plays, more or less complete, of Plautus. Of the remainder, we have the names of about one hundred and forty plays, and fragments amounting in the aggregate to about eight hundred lines. Apart from Plautus and Terence, the great names of the department were Nævius and Cæcilius Statius. In the famous canon of Volcacius Sedigitus—which from time to time some scholar claims to understand—the order of merit is Cæcilius, Plautus, Nævius, Licinius, Atilius, Terence, Turpilius, Trabea, Luscius Lanuvius, Ennius. Apparently the latest of the group was Turpilius, who died at Sinuessa in 103. He had already outlived the popularity of his department by nearly a generation.

The *Palliata* was carefully studied in the two great eras of Roman scholarship—the age of Varro and the age of Suetonius. Many plays of that type were doubtless composed, especially by 'persons of quality,' in the time of Domitian, when it was the fashion to write books. But, after the

first great period of its existence, the stage tradition of the *Palliata*, so far as we are now able to trace it, is largely the stage tradition of Plautus and Terence. Indeed, the only Roman comedy to survive, apart from these two authors, is a reworking of the *Aulularia*, belonging probably to the second half of the 4th cent. A.D., and known as the *Querolus*.¹

3. The '*Togata*.'—This was the successor of the *Palliata* in public favour. Its *floruit* belongs to the two generations between the fall of the *Palliata* and the time of Sulla, and the great names of the department are Titinius, L. Afranius,² and T. Quintius Atta. Little is known of these men personally, except that Atta died in 77 B.C., and that Afranius was an older contemporary. Seventy titles and about four or five hundred fragments, mostly lexical, are all that remain of this type.

According to the ordinary Roman definition (e.g. esp. Horace, *Ars Poetica*, 288), which we have inherited, the *Togata* was the Roman parallel of the *Palliata*. It was a Roman comedy of manners, representing Roman life, as the *Palliata* was a Greek comedy of manners representing Greek life. The scene was Roman and the costumes were Roman; hence, of course, the name. Thanks to Varro, however, we learn that this is not a definition of the *Fabula Togata* as a whole (which ought to mean any play distinctively Roman), but of its most important sub-variety, the *Tabernaria*. The distinction is valuable to us, because the word itself is more significant and descriptive than is *Togata*. Moreover, Diomedes adds that '*tabernariae dicuntur et humilitate personarum et argumentorum similitudine comoediis pares, in quibus non magistratus regesve sed humiles homines et privatae domus inducuntur, quae quidem olim quod tabulis tege-rentur communiter tabernae vocabantur.*' This statement is amply supported by the titles and, so far as they go, by the fragments. The scene was generally (perhaps always) outside of Rome, and for the most part in the small towns of Southern Latium. Indeed, Mommsen claimed that the scene had to be laid in a town of the Latin league, because the poet was not allowed to represent either Rome or a Roman citizen on the stage. Hence Mommsen would connect the death of the *Togata* in Sulla's time with the extension of citizenship to the Latin towns at that date. If so, why was it that the *Togatae* of the great masters were popular on the stage until late in the Empire?

The fifteen titles of Titinius represent what was originally about twenty thousand lines of text. About one hundred and eighty fragmentary verses survive. So far as form is concerned, the model was the *Palliata*. In his metrical art, Titinius followed the greater regularity of Terence, but in language and temperament he seems to have had more in common with Plautus. His plays were all family pieces, and it is clear that the life depicted was that of the lower classes and of the country folk. The prominence of women, noticeable not only in Titinius but in other authors of this type, is itself characteristic of Italian life. There is no sign of the kidnappers, and very little of the slaves which Festus tells us were standard characters in these plays. The only type suggesting the *Palliata* is the parasite. The others are more Italic, and remind us rather of the *Atellana* and the mime than of the *Palliata*.

By far the greatest, the most prolific, and the best known of the trio was Afranius. Indeed, like Molière and Ben Jonson, Afranius seems to have

¹ *Querolus* sive *Aulularia*, ed. by R. Peiper, Leipzig, 1876, etc.

² F. Marx, in Pauly-Wiesowa, i. 703 f. For the *Togata* as a department, see esp. Edmond Courbaud, *De Comœdia Togata*, Paris, 1899.

been an excellent illustration of Gildersleeve's statement that 'in literature as in life the greatest borrowers are often the richest men.' Cicero (*Brut.* 167) says that he imitated G. Titius the orator, and even in the disjointed fragments now surviving we hear echoes of Pacuvius, possibly even of Cato, but above all of Menander. In fact, enough is left of his prologue to the *Compitalia* to show not only that he followed Menander, but that he was criticized for it. His reply was that 'he borrowed not alone from Menander, but from any other writer, Greek or Latin, whenever he found something suitable to his purpose.' 'Why not? Is any Latin writer comparable with Terence in either language or wit? At the same time, was there ever such a borrower?' Evidently we have here the echoes of a lively discussion among the critics of the Gracchan Age—one which was doubtless taken up in some of the lost satires of Lucilius. Cicero (*de Fin.* i. 7) explains the nature of the debt to Menander. It concerned not plots, or scenes, or characters, but *locos quosdam*, detached passages; it was the same relation which Ennius bore to Homer that every first-class Roman poet bore to his Greek models. But in itself the genius of Afranius seems to have had much in common with that of Menander, and Horace's (*Epist.* ii. 1. 57) 'dicitor Afranii toga convenisse Menandro'

was evidently the prevailing opinion of critics in his time. Doubtless, he did not entirely accept it; nevertheless, he quotes it without comment. Forty-three titles and over four hundred lines of fragments survive. Noticeable in Afranius as compared with Titinius, and in Atta perhaps as compared with Afranius, is the steady growth towards the literary *Atellana* and mime, those rivals of the *Togata* which were already at hand.

The *Togata* was much read and admired as a classic in the age of Hadrian and the Antonines. After that we hear little of it. In all the great library of antique realism, now gone beyond recall, there is probably no department, at least so far as Rome is concerned, which we could so ill afford to lose. The literature of Rome as it now survives is largely the literature of a great capital—in other words, that portion of the written word which was capable of appealing to the common denominator of taste for a long stretch of time in a universal empire. Whatever was local or peculiar in form or content was for that very reason heavily handicapped in the struggle for existence all through the arid waste which lies between the 3rd or 4th century and the Renaissance. The *Togata* was the artistic comedy of the Roman *bourgeoisie*. It must have been an incomparable picture of the ordinary life of the Italian countryside, of old towns like Præneste or Veliternum, with all their local ambitions, characters, and peculiarities, during the 2nd cent. B.C. As it is, our knowledge of this aspect of antique Italian life must be derived for the most part from the priceless fragments of Petronius, and the great palimpsest of Pompeii written over by the hand of Vesuvius.

4. Tragedy.—The rules of the Roman tragedy founded by Livius Andronicus and developed by his followers are practically the same as those already stated for the *Palliata*. The great names are Ennius, his nephew Pacuvius, and Accius. Accius survived until the youth of Cicero, but it is clear that even then the stage tradition of the tragedy lived in the fame of the great actor Asopos rather than by the popularity of the department as such. The tragedy of this period, the only great period of its existence on Roman soil, is now represented by nearly one hundred titles and about twelve hundred lines of fragments. Among the numerous lost tragedies written in later times the famous *Thyestes* of Varius and the equally famous

Medea of Ovid were the most important. Irrespective of such monstrosities as the *Medea* of Hosidius Geta (a Vergilian cento [see *Anth. Lat.* 17, RJ]), the only survivors of this department are the plays of Seneca, belonging to the time of Nero. It has often been said, though the statement is really quite without warrant, that they were never intended for the stage. However that may be, it is certain that their influence on the early tragedy of England and France is one of the most important chapters in the formative history of the modern drama. Their connexion, if they have any, with the tragedy of the Republican period cannot be stated definitely. Formally speaking, the choruses go back to the school of Horace, and the plays throughout were deeply affected by contemporary rhetoric.

5. The 'Prætexta.'—The *Prætexta*, the Roman parallel to the *Tragædia* of Livius and his followers, as the *Togata* was the Roman parallel to the *Palliata*, was the invention of Nævius, the greatest constructive genius, perhaps, of Roman poetry. But, owing in part, no doubt, to the comparative poverty of native Roman legends, the idea was not especially fruitful. One example, however, survives. This is the *Octavia*, a play by some unknown author, probably of the Flavian period, and possibly connected in some way with the house of the Annæi, inasmuch as it has come down to us in the corpus of Seneca's tragedies.

So much for a brief survey of the Roman drama as a purely literary production from beginning to end (*Palliata* and *Togata*, *Tragædia* and *Prætexta*). It remains to consider those types of the drama which had a popular as well as a literary history. The most important of these, and the only ones with which we need to be concerned in the present inquiry, are the mime and the *Fabula Atellana*. Strictly speaking, the *Atellana* should be considered a variety of the mime. Here, however, we take it up first, not only because as a literary form it is the immediate successor of the *Togata* in public favour, but also because as a popular form it is probably the oldest dramatic entertainment known to have existed on Roman soil.

6. The 'Atellana.'—The *Fabula Atellana*¹ is the 'play from Atella,' a little town in Campania. Campanian origin is also attested by the fact that the play was known as 'Oscan,' and the characters as 'Oscæ personæ' (Diomedes, i. 490, i.e. Varro). Generally speaking, of course, these plays were acted in Latin, but Strabo (v. 233; cf. Sueton. *Jul.* 39) tells us that in his time (the Augustan Age) they were still acted in Oscan *κατὰ τὴν ἀρχαίαν παράδοσιν*, 'during the national festival.' This statement, so far from being incredible, as many have thought, is merely an excellent illustration of the well-known tendency of liturgy to linguistic conservatism (compare the use of Sumero-Akkadian by the Babylonians; of Greek in the Roman worship of Ceres, as attested by Polybius, xxx. 14, and Cic. *Balb.* 55; of Greek in the Russian, and of Latin in the Roman Church, etc.). It proves beyond a doubt not only that the play was Oscan, but that the Romans took it over in the first place in consequence of some vow or in connexion with some special occasion, and acted it at 'the national festival.' It is, therefore, reasonable to suppose that the small and obscure town of Campania recorded in the title *Atellana* was either the centre of the worship commemorated or in some way associated with its adoption. The date, though uncertain, was at least anterior to the time of Livius Andronicus, and probably by a considerable period. This is shown in two ways. The first is

¹ F. Marx, in Pauly-Wissowa, ii. 1914 ff., with ref.; A. Dieterich, *Fulcinella, Pompejanische Wandbilder und römische Satyrspele*, Leipzig, 1897.

derived from the special and peculiar privileges of the actors. The first actors hired by Livius Andronicus were either slaves or freedmen. Hence the invariable rule of later days that no Roman citizen could go on the stage without *ipso facto* incurring *infamia*, i.e. the loss of certain important civic rights (as exemplified, for instance, by the famous case of the mimograph Laberius in Caesar's time). The one exception was the *Atellana*. Here and here only the actor was not obliged to remove his mask, and a citizen could take part without incurring any legal disability. This can only mean that the *Atellana* was introduced at a time when the Romans had no professional actors, and probably no festival at which theatrical performances were regularly given. The *Atellana* had been acted by Campanian citizens. The Romans followed their model, and acted the play themselves as best they could. When the Greek drama was introduced in 240 B.C. with its professional actors (slaves and freedmen), the business ceased to be honourable, and Roman citizens gave it up. But that they had once taken part in the *Atellana* was reflected in the freedom from *infamia* which ever after remained a privilege of the actors in this particular type of drama. The special privilege of retaining the mask also shows that the *Atellana* came early to Rome; not, however, because the professional played without a mask in early times, but because of the extreme antiquity of masks in the religious rite.

The second argument for the high antiquity of the *Atellana* among the Romans is derived from the well-known principle that, unless the ground is already occupied, the play always brings its theatre with it. Now, Bethe (*Proleg. zur Gesch. des Theaters im Alterthum*, Leipzig, 1896) has shown, we think conclusively, that the peculiar shape of the Roman stage, about which so much has been written, is not due to the fact that it was a modification of the Hellenistic type. On the contrary, it reflects the type associated from time immemorial with the *Atellana*. In other words, when Livius Andronicus brought out his first Greek plays, the *Atellana* was already in possession, and he adopted its stage as a matter of course. The same rule and the same line of investigation applied to the stage of the *Atellana* itself tend to prove that this play was not an Oscan invention. It was a popular Oscan representation of the *φλύακες*, one of the oldest types of the ancient Dorian comedy in Southern Italy.

The importation of the *Atellana* to Rome may have been due to some incident in connexion with the fall of Campania in 338. Perhaps, too, Livy's description of the play which he calls a *satura* may go back ultimately to a confused recollection of the Roman *Atellana* in those early days.

Like all genuine folk-dramas, the *Atellana* was not committed to writing. The actors merely agreed upon the plot. The dialogue was improvised. The characters were confined to a certain number of fixed types, each with a generic name, and there were no women. These features are all typical of genuine folk-drama the world over, and the last two, especially, indicate the high antiquity of the play. The use of masks has already been mentioned. This and the wearing of the phallus are ceremonial, and show the antiquity of the type. The use of masks also accounts for the extreme liveliness of gesture characteristic of the *Atellana* (Juvenal, vi. 71). They were also peculiarly applicable for 'Oscæ personae,' for a play in which all the characters were fixed. The plot, whatever it happened to be, attached itself to these familiar personified types, and represented their various adventures in the given situations. As befitted the roaring farce, the situation was always ludicrous and the plot

full of intrigue. In fact, 'intrigue' is derived from *trica* (Dieterich, *Pulcinella*, 98, n. 2), and *trica*, 'tricks,' was the word used to describe the action of these plays (Varro, *Sat. Men.* 182 B; cf. Ribbeck, *Leipzig. Stud.* ix. [1886] 337). The language was conversational, and the life depicted was the life of ordinary people (Varro, *de Ling. Lat.* vii. 84). Obscenity was notably prominent (Quint. vi. 3. 47, etc.); but this, too, was ceremonial and traditional as well as a matter of choice. The most striking and instructive modern parallel—in fact, if we may believe Dieterich, the actual descendant and representative of the *Atellana* in the world of to-day—is the Neapolitan *Commedia dell' Arte*.

The four fixed characters of the *Atellana* are Maccus, Bucco, Pappus, and Dossenus. Maccus (probably Oscan and borrowed from μακκοῦν, to sit 'mooning') is stupid, greedy, and lustful—the butt of every one. He corresponds to *Stupidus* in the mime. His weapon is the 'clava scirpea' (Novius, 79 R), for which we have a striking parallel in Bajazzo (of the *Commedia dell' Arte*), i.e. Pagliazzo, the man with the 'hay club' (Dieterich, p. 112). Bucco (a popular derivation from vulgar Latin *bucca*, as the name indicates; cf. Gr. βύθων) is a great eater, a huge talker, an unconscionable braggart, an arrant coward. 'Over-large jaws,' as we learn from the old *Scriptores Physiognomici* (i. 412, 7 Foerster), 'betoken a blockhead, a babbler, a well-spring of words, words, words,' a man who 'talks with his mouth' (*bucca*), as our popular expression goes. Bucco is the talkative and aggressive fool, the 'cheerful ass,' as opposed to Maccus the great gaby, the simple and confiding blockhead. Pappus (from Greek πάππος) is the 'old man,' avaricious, surly, lustful, foolish, conceited, therefore always being overreached: in short, Pappus is Pantaloe. Dossenus (from *dorsum*, a pure Latin word) is 'the man with the back,' i.e. the hunchback. In the popular conception this affliction has always implied wisdom and cunning (cf. *Æsop*) as well as certain powers more or less uncanny. Hence, in the *Atellana*, Dossenus, like his modern representative *Il Dottore*, in *Pulcinella*, is the sly and cunning rascal, the 'professor,' the caricature of the scholar and philosopher. His second name of Manducus (cf. *manducare, mangiare, manger*) shows that, like Bucco, he is also a great eater.

Such were the standard characters, and such seem to have been the main characteristics of the *Atellana* in its traditional and purely popular form.

For a brief period this old folk-drama was raised to the dignity of a literary department, and succeeded the *Togata* in public favour. The period is the time of Sulla, and the great names are Pomponius of Bologna and Novius. The lines upon which they worked out the problem were doubtless suggested in no small degree by the dramatic studies of Accius and his contemporary, C. Iulius Cæsar Strabo. These men investigated the Roman drama in connexion with Greek models, the question of correct titles (Varro, *de Ling. Lat.* x. 70), of masks, etc. Influence of the *Palliata* and *Togata* is suggested, though not proved, by occasional identity of titles. We also hear of *cantica* in Galba's time (Suet. *Nero*, 39, *Galba*, 13), and it is natural to suppose that in raising the old farce to the dignity of a literary product something was borrowed from the higher types. It is clear, however, that the essential characteristics of the folk-drama were all preserved. The dialogue was now written out, of course, and the statement of Terentianus Maurus (vi. 396 K), that the metre used was the *septenarius*, is borne out by the fragments. In other words, there was no recitative, the play was all comic. Indeed, in language, humour, and situation these plays were more distinctly

Aristophanic than anything else in Roman literature. Equally Aristophanic was the habit of personal criticism, the *δρομαστικὴ κωμωδία*, of which we hear during the Empire from Tiberius to Trajan (Tac. *Ann.* iv. 14; Suet. *Tib.* 45, *Calig.* 27, *Nero*, 39, *Galba*, 13, etc.).

With the rise of the *Atellana* to a literary form, we have to deal with a confused and confusing tangle of testimonies regarding the *Atellana*, the *Exodium*, the *Rhinthonica*, and the Greek Satyr-drama.

The conclusion seems to be (cf. schol. Juv. iii. 175, vi. 71; Suet. *Tib.* 45; Cic. *Fam.* vii. 1, ix. 16) that the literary *Atellana* was used as an *exodium*, and the first mention of the word in Lucilius (180-103 B.C.) coincides with its development in this sphere. A short piece of three to four hundred lines, and with only a few actors (Ascon. on Cic. *Verr.* 15), it seemed hardly worth while, so to speak, to put it on the stage by itself. Apparently, therefore, it was the analogy of the Satyr-drama that suggested the use of the literary *Atellana* as an *exodium*, an after-piece. By later critics it actually was identified with the Satyr-drama (schol. Juv. vi. 71; Porphy. on Hor. *Ars Poet.* 221, etc.). But it is hard to see how the two could coalesce. The literary model for the *Atellana* to follow ought to be the *Hilarotragodia*, the *Rhinthonica* (Porphy. *l.c.*; schol. Juv. *l.c.*), and that it actually did so is suggested by certain titles of Pomponius (Vahlen, *Rhein. Mus.* xvi. [1801] 472). As *Rhinthonica* plays were travesties of Euripides, so the *Rhinthonica* of Pomponius and Novius were travesties of Pacuvius and Accius. Were the *Rhinthonica* of Pomponius and Novius *Atellana*, or is this idea of later critics due to the fact that Pomponius and Novius wrote both kinds and used both kinds as *exodia*? We believe Marx is right in adopting the second alternative. In fact, the loss of all these departments, the similarity in type, use, titles, and characters, make it extremely difficult to decide whether the *Atellana*, *Rhinthonica*, and Satyr-drama ever did coalesce to any extent. Probably not. The explanation seems to be that Pomponius and Novius wrote all three and used them for *exodia*.

The *Atellana* was evidently popular under the Empire; the old folk-drama was never forgotten, but as a living department of literature it seems to have been largely the creation of these two men, and as early as 55 B.C. (cf. Cic. *Fam.* vii. 1, 3 [written in 46]) the literary *Atellana* as an *exodium* had already given way to the mimes of Decimus Laberius and Publius Syrus, the only two men of note who raised the mime to a literary form in the Latin language. If this were all, or if this chapter could be dealt with independently, the mime might be dismissed with the few phrases usually accorded to it. We have learned from Reich,¹ however, that this cannot be done, and with his general conclusions we must agree in the main. The literary productions of Laberius and Syrus, like the *Atellana* by which the mime was preceded, are a mere branch of the parent stock.

7. The mime.—In its larger sense the mime is the most important phenomenon in the history of dramatic art; it appears in a dozen different forms, it is responsible for a dozen others; the history of it is the history of the growth of realism, of the rise of the democracy; it has popular periods and literary periods, a Greek history, a Roman history, a Græco-Roman history, a modern history. Indeed, after reading Reich one may sum up the whole story of the antique drama with the simple phrase, 'Mime thou wert, to mime didst thou return.' For the complete and detailed discussion of this long and interesting development, the reader is referred to Reich himself. Here it is manifestly impossible to give anything more than some of the important facts in outline.

The earliest appearance of the word 'mime' is as a title for the famous compositions of Sophron (5th cent. B.C.). These dramatic presentations of single incidents or situations, according to Suidas, were in prose and written in the Doric dialect. The substitution of the *scædôn* for prose gives the form and the atmosphere of the *mimiambi* of Herondas, the Teniers of Alexandrian life. A more elevated metre, on the other hand, starts us, by way of Sophron's imitator Theocritus, on the long history of bucolic poetry. A convenient generic term for

this type is Reich's *mimologia*, i.e. the mime as a recitation.

There were also purely lyric mimes, which were sung. To these Reich gives the generic title of *mimodia*. Particular species of it are *magodia*, *Simodia*, *hilarodia*, *Lysiodia*. Between the two we have *kinaidologia* and *Ionikologia*, all in verse, but partly recited, partly sung. Finally, in the Alexandrian period, comes the fully developed mimetic drama, which was a combination of *mimologia* and *mimodia*, and retained the characteristics of both. With a fully developed plot, it had prose parts and iambic parts, like the *mimologia*, and lyric parts—*cantica*—like the *mimodia*. With the conquests of Alexander this new invention began to spread in the Greek East, and soon took entire possession of it. Indeed, the time came when it ruled the stage, even to the exclusion of its ancient rival, the comedies of Menander.

Toward the end of the 2nd cent. B.C., after the Romans conquered the East, and especially after Sulla's time, they brought the dramatic mime to Rome. From Rome it spread over the West, and thenceforth held possession of the entire Græco-Roman theatre until the fall of the Empire. The irruption of the Barbarians upon the West made an end of the theatre. Only the *mimi* survived, and they did so by returning to their primitive original function of *θauματοποιοί* and *γελωτοποιοί*. Such were those tumblers, jugglers, etc., of later times who went on with the ancient art of the *mimus*. It was thus that the mime of antiquity was enabled to survive the Middle Ages and reach modern days alive. In the Greek East the mime was not subjected to the same strain. For centuries the Byzantines clung to the classic dramatic mimes of Philistion. They also produced a large number of mimographs, and a number of new mimic types and figures were added to the old stock inherited from classical times. Here, as in the West, the regular classical drama had long since disappeared from the stage. When Byzantium fell, the remains of Greek culture took refuge in Italy, to reappear there at the Renaissance. Only the mime remained, and in a debased form survives to-day in the Turkish popular drama known as the *karagöz*. Two distinguishing features of the mime from beginning to end and in all its types and variations have been the mimic dance and the wearing of the phallus. The mime of all times and forms is also realistic; the very name implies it. Of course, all poetry was properly defined as *μίμησις*, but the mime was felt to represent a specific type; to give the substance of Diomedes' definition (l. 491 K), it was realism unmitigated and undiluted. We get an idea of the relentless realism of the mime when we see how much of it is still left in the refined literary representatives of it furnished by Theocritus and Herondas. Without the restraint of higher genius and literary form, it was easy for the realism of the mime to sink to mere obscenity and its wit to mere dullness.

The realism of the mime is also seen in its characters. Many of them, perhaps all, were creations of the ancient folk-mime, and had long been familiar to all classes from this source. As early perhaps as the 6th or 7th cent. B.C. we have the first development of this species of folk-composition by quasi-professionals, those *θauματοποιοί*, jugglers, rope-dancers, ventriloquists, and other homeless nomads who had been wandering about through Greece and elsewhere from time immemorial. They must soon have seen the advantage of the mimic dance, and of the mime itself, whether spoken or sung, for getting together an audience. In this way, thinks Reich, sprang up a new profession, that of the wandering *mimi*.

Among all the varieties of dramatic composition

¹ Reich, *Der Mimus, ein literar-entwicklungsgeschichtl. Versuch*, vol. i., Berlin, 1903.

the mime was the lowest, as it were, in the social scale. The same was true of the actors. Even the players of the *kithara* and flute were admitted to the Dionysiac gild, but never the *mimus*; he was always looked down upon by his more distinguished colleagues. The difference was marked from the first by the fact that the actors wore no masks, and that women's parts were taken by women. Doubtless, this was inherited from their early days as jugglers, but the 'regulars' even in their own later and evil days would never join the *mimi* on account of the women.

A convenient division of the mime as a whole is afforded by the words *παλγιον* and *ὑπόθεσις*. The mimic *ὑπόθεσις* is the developed mimic drama, the regular dramatic mime; the *παλγιον* is everything below it, i.e. *hilarodia*, *magodia*, etc., mentioned above, *kinaidologia*, *Ionikologia*, *φλύακες*, even the works of Sophron, etc., none of which were regular dramas. Frequently the *παλγιον* is what we should call a music-hall 'turn.' It was extremely popular in both Greece and Rome; and there were many varieties, such as educated animals (Vopiscus, *Carinus*, 19; Plutarch, *de Sollert. Anim.* 19, etc.), and special feats of imitation. Imitation of pigs seems to have been particularly popular (Phaedrus, v. 5; Plutarch, *Mor.* 674 B; *Paræm. Græc.* ii. 84, etc.). Plato (*Rep.* iii. 8) speaks of performers who could give perfect imitations of animals, the sound of running water, the sea, thunder, etc. See also Friedländer's *Petronius*, 1891, pp. 64, 68, 69, and 293 (note). These varieties of *μίμησις* are eternally popular.

The most important figure in the history of the department is Philistion, who lived and wrote in Rome during the 1st cent. A.D. He is the classic of the mimic *ὑπόθεσις*, the regular dramatic mime; hence the comparison of him with Menander, the classic of the New Comedy.¹ The statement of Cassiodorus (*Var.* iv. 21), that he invented the (dramatic) mime, is doubtless due to the fact that he was the first to write it all out, i.e. the dialogue as well as the songs. Evidently he was the culmination of the mime among the Greeks. But the beginnings of it take us back to pre-historic times. The mime of Sicily and Italy came from the Peloponnesus with the early Dorian settlers. It was extremely popular in Sicilian Megara and Syracuse. Tarentum was especially fond of the Italic mime, the *φλύαξ*. All these cities were founded near the beginning of the 8th cent. B.C.

The original kernel of the mime, the source from which it sprang, was the mimic dance, the beginnings of which belonged to the Stone Age, and may be seen to-day among all peoples who still belong to that stage of civilization. The ancients never forgot the connexion between the two. The mimic dance survived in all types, and the *mimus* himself was always a trained dancer. The *kinaidologi*, for instance, were originally dancers who thus accompanied their *δομῶνα ἰωνικά* (cf. Petron. 23); Hesychius describes the *magodia* itself as *ὀρχησις ἀπαλή*, the Romans designated the action of the *ὑπόθεσις* by *saltare*, and the actresses were known as *saltatriciule*. The use of *gesticulatorius* in the same connexion indicates the kind of dance.

The development of troupes of regular professional *mimi* from the old wandering *γελωτοποιοί* of primitive times seems to have taken place about the 3rd cent. B.C. These primitive ancestors of the mediæval *jongleurs* had gradually taken up all the types and themes of the old rustic mime. They travelled everywhere, they were great favourites at the court of Philip, and hordes of them followed Alexander into Asia Minor. Here the Dorian

mime met the Ionian mime, and the result was the *ὑπόθεσις*, the regular dramatic mime. The Dorian mime was originally prose (hence Sophron), although great artists like Epicharmus put it into metre. The dramatic mime (*ὑπόθεσις*), however, was noted for its *cantica*, and this combination of Dorian prose (*mimologia*) and Ionian song (*mimodia*) is what ensured the lasting success of the dramatic mime. Great emphasis was laid upon *mimodia*, and this brings the dramatic mime near to the modern opera or operetta. In this way, too, we get a substitute for the missing chorus of the *Palliata*. Plautus took over *mimodia*, and the result is the mimic *canticum* of his comedies. Pomponius and Novius seem to have done the same thing for their *Atellane*.

Now, the Ionian *mimodia* itself, like the *ὑπόθεσις*, throughout its entire history, falls into a mythological and a 'biological' type (cf. Aristox. *ap. Athen.* xiv. 621 C), the one, *hilarodia* (and *Lysiodia*), dealing with mythology and the gods (paratragic and burlesque), the other, *magodia*, with real life. Both were entirely melic, and in both singing was accompanied and supported by mimic dance and gesture; but the accompaniment of *hilarodia* was stringed instruments, of *magodia*, drums and cymbals (Athen. 620 D-621 D), and the choice of instruments itself indicates that the dancing of the latter was much freer and more lascivious.

Hilarodia and *magodia* were wide-spread and very popular in Ionia, and acquired literary form—*hilarodia* through Simos of Magnesia, *magodia* through Lysis. Hence these new literary types were called after their founders *Simodia* (*hilarodia*) and *Lysiodia* (*magodia*). Through famous poets and a regular class of actors these two types of Ionian *mimodia* survived into Roman times. Sulla's friend Metrobius was an actor of the *Lysiodia*.

Kinaidologia, or *Ionikologia*, was another type of the Ionian mime. This was not really sung, although accompanied by the mimic dance (hence it was more *mimologia* than *mimodia*). This also was very popular in Ionia, and was cultivated by such famous poets as Sotades, Alexander Aetolus, Pigres, etc.

It will thus be seen that we have an unbroken connexion between the mimic-dramatic dances of the primitive Greeks, the ancient folk-mimes of the Dorians, the Italic *φλύακες* of the 8th cent. B.C., and the dramatic mime of later times (not only in its popular form, but in its literary form; Laberius and Syrus on the Latin side, Philistion and his successors on the Greek side).

The relation of Rome to Greece in the matter of the mime now becomes more definite. Antiodemis (Antipater Sidon. *Anth. Pal.* ix. 567), the actress of *Lysiodia*, came to Rome in the 2nd cent. B.C.; Metrobius, as we have seen, in the 1st cent. B.C. In 211 B.C. an old *mimus* (Festus, 326) danced to the flute in the Roman theatre. His dance was an intermezzo, but his mere presence shows that the *mimi* had already reached Rome. The *mimi* who satirized Lucilius and Accius (150 B.C.) from the stage were following an old-established custom of the dramatic mime (*ὑπόθεσις*). The fact that they took such liberties shows that even then they must have been in Rome for a long time. The satire in question must have taken place at the *Floralia* (April 25-May 3), which was the special feast at which mimes were given. The *Floralia* were first celebrated in 238 B.C., and every year after 173. It is quite possible that the mime was connected with this feast from the first. In that case, the dramatic mime, which was established in the Greek East by the 3rd cent. B.C., was already settled in Rome in connexion with the *Floralia* by the end of the same century. Thus we see how the mimodic portion of the dramatic mime was the suggestion

¹ Σύγκρισις Μετάνδρου καὶ Φιλιστίωνος, ed. Boissonade, *Anecd. Græca*, 1829, i. 147-152; and by Studemund, *Lektionskatalog*, Breslau, 1887.

of the *cantica* of Plautus and Cæcilius Statius. The introduction of the mime and of *mimi* at that time was facilitated by the fall of Tarentum in 272, and by the fact that in 190 Scipio Asiaticus returned from Antioch, a centre of the dramatic mime, just as long afterwards Verus (Capitol. viii. 7) came back from his Parthian campaign with shiploads of *mimi*.

The early *mimi*, of course, acted in Greek, and the *scæna Græca* remained in Rome until Theodoric.¹ One is reminded of such modern parallels as the *Théâtre italien* in Paris, etc. The Latin mime was a copy of the Greek (technical terms, rules, etc.).²

Having traced the history of the department as a whole, let us pause a moment upon the fully developed dramatic mime of the best period. We have already seen that it inherited dialogue in prose and iambic verse, also lyric portions (*cantica*), accompanied by music and the traditional mimic dance. The same principle also justified the introduction of *παλῦνα*, such as trained animals, imitations, etc. In plot, too, and in length it was fully equal to the old classical drama; in compass and variety it was superior.

A good example of the type is an old favourite, well known to Ovid, and still popular in the days of Chrysostom and Chorkios.³ The name of the piece has not survived; we might, however, for convenience call it *Divorçons*, as it is an early exploitation of the inevitable 'triangle.' In the first scene we have the facile young wife and the jealous husband. Then the lover, the *cultus adulter* as he is called, appears, and with the help of Thymeles' faithful abigail, the *cata carissa*, gains an interview with her mistress in the absence of Corinthus. In the following scenes the jealous husband is subjected to all sorts of tricks and mystifications, *artes mimica*. Finally, the lover has to hide from him in a large chest (*perituri cista Latini*). He is discovered. The husband, breathing fire, tells the slave to fetch him a knife, large and very sharp, as he proposes to render the *cultus adulter* harmless. Then he changes his mind, and decides to air his wrongs in court. Then comes the court scene, and the piece is brought to an end in some farcical fashion.

The final tableau of *Divorçons* requires not only the three principal characters and the judge to be on the stage at the same time, but also a throng of slaves, witnesses, court officials, supernumeraries, etc. Other plays show even more clearly that in the mime, as in the modern drama, with which, in fact, it has much in common, the actor played but one part and the number was unrestricted. It is also clear that the 'unities' were disregarded.

Variety in form was accompanied by variety in characters. True to its composite origin, the mime is hospitable to all, from thieves and prostitutes to emperors and gods.⁴ The same was true of costume. The *Stupidus*, or clown (a typical character inherited from the primitive stock), wore the regular clown's costume, the *centunculus* (cf. the mediæval 'motley'), a shaved head, an *apex*, a mimic club (like Maccus and Bajazzo), and always the phallus. The old women, too, wore a burlesque costume. Otherwise, as in the modern drama, the dress was according to the character and the situations.

So, too, the whole gamut of human emotions was played upon: comic and tragic, humour and sentiment, go hand in hand, as in the Romantic comedy of the Elizabethan Age. The titles of Laberius suggest realistic plots for the most part. It is doubtful, however, whether such mimes as his *Necyomantia* and *Lacus Avernus* were altogether realistic. In fact, even when the mime dealt with contemporary life and was purely realistic, great emphasis was laid on the unusual, strange, and astonishing. Nothing indicates more clearly the really popular origin of the mime.⁵ A favourite character was the beggar who suddenly

becomes rich (Cic. *Phil.* ii. 27); another, the rich man who becomes a beggar (Sen. *Epist.* 113. 6). Shipwreck was a favourite *motif* (Sen. *Dial.* iv. 2, 5; Petron. 114 and 115). The *Laureolus*, a favourite mime of Domitian's time, gave the romantic adventures of a robber chieftain, and ended with his execution. Especially characteristic of the mime was some serious crime, something unusual and horrible, like parricide or incest or poisoning. Trials for perjury or poisoning are frequent, and generally serve for the *dénouement*. An interesting example, which will also illustrate the part occasionally taken by animals (cf. such titles of Laberius as *Catularius* and *Scyllax*, and see Petron. 95), is given by Plutarch, *de Sollert. Anim.* ix. 7.

This was a mime with a large number of characters and a complicated plot, which he saw in the theatre of Marcellus. Vespasian himself was present. The intrigue centred in what purported to be a poison, but was in reality a sleeping potion. As in the case of Juliet, whoever took it apparently died, but after a time revived. One of the star actors was a trained dog, and the most important incident of the mime, because it doubtless led to the *dénouement*, was trying the effect of the supposed poison upon him. As soon as he had eaten the piece of bread upon which the poison had been placed, he began to tremble and stagger, his head grew heavy, and he finally stiffened out as if dead, and allowed himself to be carried about in that state. When it was time to recover, he imitated perfectly all the phases of returning consciousness, and, while the actors indicated their astonishment at the fact that the supposed victim of a deadly dose had come to life again, the dog himself ran to his master and joyously fawned upon him.

The connexion of this incident with the plot is not stated, but we may believe with Reich that there was a connexion, and that the probable nature of it is illustrated by (the mime from which was derived?) the famous story of Apuleius, *Met.* 10. 2. A rich old grandee took for a second wife a young and very beautiful woman. She fell violently in love with her stepson, but was rejected by him, and her passion was turned to hatred. (Note that this *motif* has been a popular favourite ever since the days of Joseph and Hippolytus. It appears constantly in folk-tradition, in the mime, in that echo of the mime, the rhetorical *controversia* and *suasoria*, in the Italian *novelle*, etc.) A slave procures her a sudden and deadly poison, she drops it in a cup of wine, and the pair leave it where the young man will take it without arousing suspicion. Presently, however, her own son returns from school, and, being thirsty—as small boys always are—drinks the wine and falls dead on the spot. (Here is the unexpected turn of fortune which the mime, that faithful interpreter of the popular mind, so dearly loves.)

It is, of course, clear to all that the child has died of poison. The woman accuses her stepson of the deed, and alleges as a cause that he had attempted incest with herself. The young man is arrested, there is a great trial scene in court, and, after much oratory on both sides, he is condemned to death. At this point, however, we have another unexpected turn. An old judge, who is also a skilful physician, has been quietly listening to the trial all this time. At this point he rises to his feet and informs the court that he himself had sold the drug to the slave, and that it is not a poison at all, but a sleeping potion. 'Let us go now to the tomb,' said he, 'the child will soon be waking up.' Thus the woman's guilt was discovered; but, true to the mime, she was merely turned adrift, not executed.

Another plot eminently characteristic of the mime is Phædrus, *App.* xiv. 'The two suitors,' which reappears in an old French *fabliau* known as 'Le vair Palefrol,' 'The grey Horse.'

This is Romantic comedy. So, too, the mime takes us into the world of phantasy. Witches, warlocks, magicians, prophets, ghosts, are all favourite characters. In the old Dorian mime popular demons were presented, and the metamorphosis of men into animals, which is well attested for the mime of all periods, takes us straight into the fantastic land of 'the Frog King,' of 'Beauty and the Beast,' of 'the Golden Crab,' of 'the Three Citrons,' and the like. In this function the mime is a curiously complete prototype of Carlo Gozzi's famous experiment with the fairy tales of Italy. To the same category belong the mythological mimes, *Priapus*, *Anna Perenna*, *Anubis Moechus*,¹ *Kinyras* and *Myrrha* (Jos. *Ant.*

the survival of the *Sententie* of Syrus. These were extracted from his mimes at an early date, and published as a sort of *vademecum* for the use of students and professors, from which might be drawn those sententious observations so dearly loved by the rhetoric of the Silver Age. For those who wish to recover the plots, scenes, and *motifs* most characteristic of the mime, the practice declamations of the rhetorical schools probably afford the richest field for investigation.

¹ Cicero, *Fam.* vii. 1; Sueton. *Jul.* 39, etc.

² See Reich, *op. cit.* p. 561 f., for details.

³ Ovid, *Trist.* ii. 497 f., etc.; Juvenal, viii. 196, vi. 42; Chrysostom, ii. 318, 13; Chorkios (Reich, p. 204 ff.). In Juvenal's time the wife was acted by Thymeles, the husband by Corinthus, the lover by Latinus. They were all famous 'artists.' Thymeles well might be called the Mrs. Bracegirdle of the Flavian period.

⁴ See esp. Cyprian, *de Spect.* 6. Many titles of Laberius and Syrus speak for themselves in this respect.

⁵ The Latin mimes were carefully studied in the rhetorical schools during and after the Augustan Age. To this fact is due

XIX. i. 15), *Paris and Cœnone* (cf. Suet. *Dom.* 19), Philistion's *Deukalion* and *Pyrrha*, etc.

It will be seen that in form and type the mime was not subject to the restrictions of the classical drama most familiar to us. It may be added that the same was true of many details of its presentation. First and most important, the actors, as we have already seen, never wore masks. It is not necessary to explain what this means for dramatic art. The *mimus* wore his own face only; indeed, one of the principal characters of the mime was known in Latin as *Sannio* (Cic. *de Orat.* ii. 61), i.e. 'the man who makes faces'—a speciality of the mime.¹ So, too, as we have seen, only in the mime were women's parts always taken by women. And, as there was no restriction of type, the characters included women of all ages and kinds. It is characteristic of the mime as a whole, however, that old women should be a speciality. This enabled a talented actress to keep on indefinitely (Pliny, *HN* vii. 48).

The original stage of the mime, as we see from old vase paintings of the *φλύακες*,² was a platform on props about three feet from the ground, and with steps in front by which the actor mounted. Change to the regular stage was very slow. With the beginning of the theatres the mime was acted on a small platform in the orchestra and in front of the regular stage. It was thus given as an *emboliarium* (Diomed. 490) or *intermezzo*. The next step was to the regular stage, upon which in Cicero's time the mime took the place of the *Atellana* as an *exodium* (Cic. *Fam.* ix. 16). At the *Floralia*, however, it had always been acted independently, and it gradually drew away from its function as an *exodium* (Diomed. 491 f.), until in the early Empire it took to the regular stage, upon which, together with the pantomime, it finally ruled alone. One distinction, however, survived. The mime was acted in front of the *siparium*, and it was through this that the actors made their exits and entrances. The stage was dressed as in Shakespeare's time, but, as also in Shakespeare's time, there was no scene-shifting. Claudian (*Epig. Græc.* 6) shows that there was, as we might assume, a regular *corps de ballet*. Doubtless it filled the same place and did much the same thing as in our times.

In view of what has been said, it is not difficult to understand why the fully developed dramatic mime, in spite of its faults, finally ruled alone. If the drama springs from the people, and if its highest function is to represent their life and their point of view, then the dramatic mime has a greater right to be called the national drama of the Græco-Roman world than has the classical drama of Greece or its short-lived and always more or less exotic representative in Rome. It is likely that Quintilian's verdict of 'in comoedia maxime claudicamus' might have been applied with equal justice to the Roman tragedy. Cicero was a notorious lover of the mime, a man of judgment and taste in such matters, if there ever was one. It is true, of course, that the mime was the drama of the age, and that the age was an age of realism. For that reason alone the average man of to-day would doubtless have agreed with him. But, after all, the realism of Cicero's time, however relentless, was not the realism of our time. The mimograph of those days, realist though he was, still possessed the vivid imagination, the nimble fancy, and, therefore, the sentiment of his race and time—those qualities without which the bubbling well-spring of humour and invention must soon dry up. Moreover, his audience was

endowed with the same qualities. It still believed in ghosts and magic, it still had a folk-lore, it still possessed an incomparably rich mythology. Hence the real world of antiquity finds its parallel in the age of Elizabeth rather than in our own. It was only partially real after all. And so the mime, like the Elizabethan 'tragi-comedy,' was now wildly humorous, now fantastically horrible. The Romantic and the real, humour and pathos, comic and tragic, fact and fancy—all these and more were called upon to picture a life which, real as it once was, is no longer ours and will never be ours again.

The dramatic mime, however, seems never to have taken its position as a great literary department. In the long run the habit of leaving the dialogue to the actors proved to be inveterate, and this alone would have been fatal. But the most serious menace to the mime was its own splendid inheritance of versatility. Dialogue and plot, music, singing, dancing, an occasional weakness for 'specialities'—the combination is unstable, and, except in the hands of a great genius like Philistion, one or another was sure to be magnified at the expense of the rest. Audiences are uncritical, playwrights are human, actors are—actors. Between the three the mime of the 4th cent. A.D. no doubt deserved the adverse criticism bestowed upon it by Donatus and Cassiodorus. But, whatever its faults and virtues, the vitality of the mime was amazing. Time and change, national ruin, ecclesiastical fulmination and anathema—nothing could prevail against it. We cannot ignore a dramatic type which finally ousted both Euripides and Menander from the stage, and ruled alone for over half a millennium.

8. State control of the theatre.—The Roman theatre,¹ like the Roman play, and, for the most part, the details of its presentation, were a continuation and development of the Greek prototypes as they existed in the Alexandrian period. All derive ultimately from the one fact that the Roman play, like its predecessor, was clearly and distinctly an act of worship to the gods. It was, therefore, given at festivals, more especially at those festivals which the State religion, hence the State itself, had set apart for purposes of public worship. The plays were merely one item of the ritual observed. Other items were the races, gladiatorial combats, etc., which gave the general name of *ludi* to these occasions. In the time of Augustus, the regular annual *ludi*, during which plays were given, were the *Megalenses* (April 4–10), the *Ceriales* (April 12–19), the *Florales* (April 28–May 3), the *Apollinares* (July 6–13), the *Romani* (Sept. 4–19), the *Plebei* (Nov. 4–17). Other *ludi* of the Augustan Age, during which plays were or could be given, were generally sporadic and meant to commemorate some special occasion, such as a great victory or the death of some distinguished man. Later in the Empire the tendency to increase the regular annual *ludi* became very marked, and serious attempts to reduce the number were made by several of the Emperors, notably Nerva, Septimius Severus, and Macrinus. Nevertheless, according to the calendar of 354, not less than 175 days in the year were given to *ludi*, and 101 of this number to plays.

The play was managed by the State. It is true that *ludi* were given by persons more or less in private life, but they were still an act of worship, the consent of the State had first to be secured, and, lastly, they were supposed to be under the

general supervision of State officials. At no time apparently was the antique theatre a purely private enterprise; still less was it ever a purely financial one. One or two exceptions under the Empire are mentioned by Tacitus, but with such disapprobation that they illustrate rather than invalidate the rule.

Until the time of Augustus five of the six great annual *ludi* mentioned above were in charge of the various *ædiles*. The sixth, the *Apollinares*, which occurred in July, was managed by the *prætor urbanus*. The officer in charge had everything to do. Indeed, in earlier times, as we learn from Plautus, he even attended to the matter of costumes. He also built the theatre, and afterwards had to clear it away and put the place in order. Oddly enough, Rome never seems to have had but two permanent theatres—the theatre of Pompey, built in 55, and the theatre of Marcellus, which belongs to the Augustan Age. The *ædile* also had charge of the audience during the performance. In this he was assisted by his corps of *designatores*, or ushers. The *designator*, however, was a vastly more important person than is the modern usher. He was a regular deputy of the civil magistrate in charge, and as such the majesty of the law was with him. He had lictors, and was expected to move or remove people whenever necessary. In the 2nd cent., as we learn from the jurist Ulpian, this office was in the gift of the Emperor, and was of great value. The *ædile* had a regular sum allowed him from the State treasury to meet the bills incurred. But this *lucra*, as it was called, had been fixed as early as the Second Punic War, and was far from keeping pace with the growing expenses of the function for which it was designed. Nevertheless, the office of *ædile* as *maître de plaisir* made one so prominent and popular that it was much sought after by the aristocracy as a means to further advancement, and they spent fabulous sums in giving the shows devolving upon them. But at the accession of Augustus no patricians could be found who were willing to accept the office. He, therefore, transferred the management of theatrical matters to the *prætors*, and this remained the law under the Empire.

It is well known that one's seat at the theatre was determined by one's position in the State, and that it was regulated by law. The theatre was a religious institution, in charge of the Government. Such being the case, a seat at the theatre, like a right to vote or to bear arms, was a privilege of citizenship, and therefore to be assigned according to that principle. For that reason, in the earlier days of the Republic, slaves could not attend the theatre; and the same must have been true of strangers unless they were guests of the State. But in the time of Augustus these restrictions had ceased to be in force. The law on the subject of seating as it existed under the Empire rested for the most part upon enactments of Augustus, although these had been largely anticipated by generations of growth in Republican times. The orchestra, though the name reflecting its original use was and still is retained, was set apart for the senators. This rule had been in force since 194 B.C. Representatives of foreign States and, under the Empire, certain members of the reigning house were allowed to sit here. The position of the knights was finally established by the *Lex Roscia Theatralis*. This famous law was pushed through by L. Roscius Otho, tribune of the people in 67 B.C. Among other things it provided that the property qualification of a Roman knight should be raised to 400,000 sesterces, and that the first fourteen rows behind the orchestra should be set apart for the exclusive use of this order. The law

also provided that even within these distinctions should be made among themselves. For example, the first were reserved for those knights who had been as military tribunes or land-commissioners. Younger knights also had a separate place which under the Empire was known as the *Germanici*. Even insolvent knights, who were obliged to sit in a group by themselves.

Previous enactments were extended and amended by the *Lex Julia Theatralis* of 68 B.C. This law, which was much affected by theatrical ordinances, prescribed the place of every one in all parts of the house. The public sat according to *tribus*, or wards. Here distinctions were made—for instance, of husbands and fathers as against widows and spinsters. The women, and with them young children, had to sit by themselves in the back rows. The one most notable exception was the *Vestals*, who had seats of honour near the front. So the various colleges of priests and other officials had seats of their own, often of a special kind, with backs, arms, etc. Sometimes a seat was given a man *in perpetuum*, usually in recognition of distinguished services rendered to the State. Such a seat was also used by his family and was inherited.

The usual time for a play to begin was in the morning. A play of Plautus, including music, would take about three hours. With two or more should be given in succession, sometimes the case, was left to the *prætor* in charge. Plays were never given at night for ceremonial reasons. This was always true when mimes were acted at the *Floralia*. Details, so far as they bear upon the subject of discussion, have already been dealt with elsewhere.

9. The Roman drama not truly national. In view of what has been said in the previous chapter, we might perhaps conclude that as a literary production the life of the Roman drama was amazingly brief, its great authors comparatively its genuine popularity problematical. We may agree, however, that the reasons for it were the *Palliata* died of too much Greek, that the mimic sorrows of the tragedy could not appeal to an audience steeped in the bloody realities of the arena, that idealism does not and cannot reach the generation of realists. These are all true, they are symptoms, not causes. There were plenty of men in the Golden Age of Pericles who preferred cock-fighting to comedy, and athletes to Æschylus. Nevertheless, the drama really reached the hearts of the people. This was because it was theirs, because it was truly national. The Roman drama, on the contrary, both as an institution and as a department of literature, was profoundly affected by the intrusion upon it at an early date of the fully developed Hellenic drama and the long-established Hellenic masterpieces. The consequence was that the Roman drama as we know it, and as the Romans themselves knew it during the historical period, was not really national, and had no deep roots in national life. The atmosphere of the *Palliata* was foreign, the material of the tragedy was not only foreign but comparatively remote; even the worship of Dionysus—god of the drama—was an exotic, and the feeling of mistrust entertained by the genuine old Roman is clearly indicated by the famous *Senatusconsultum de Bacanabibus*. His affections, his traditions, his beliefs were deeply rooted in his own deities, the old rustic deities of the Italian countryside. Foreign gods, above all foreign gods with 'mysteries,' did not appeal to him. He was opposed to Dionysus, as long after-

wards he was opposed to the Christians, and it was the same feeling which prompted him to ignore for generations the intrusion of the Hellenistic week of seven days, each under the protection of a planetary deity. The actor, too, as we have seen, was a foreigner or its equivalent. In other words, the profession which in Greece was a consecration, involved in Rome the loss of civic rights. Who shall say how far the development of histrionic talent and the appreciation of it as such were affected by this absurd but entirely logical rule?

We have seen that two types of drama among the Romans remained popular for an indefinite period. The statements just made, however, are proved, rather than disproved, by these exceptions. The *Atellana* was a folk-drama, which in itself ensures longevity; it was also very old, and for the average Roman it was Roman from the first. The mime also was very old, but in its developed dramatic form it was neither Greek nor Roman, but really the child of the new era. It was Græco-Roman, and belonged to the Empire. The mime, too, as was said above, maintained itself for an indefinite period. In the long run, however, its vitality was due not to its superiority as an organic play, but to its enormous flexibility and to its power of adapting itself to the tastes of the passing hour. It always had a residuum of folk-elements, such as a few fixed characters and the habit of improvising dialogue; it could introduce popular songs and dances, also imitations and other music-hall 'turns.' In short, whatever it was capable of or had once been under Philistion and his compeers, it survived only as a theatrical performance, not as a high-class dramatic composition.

10. Parody of Christian rites.—Hatred of the Christians, for example, was long popular, and the consistent appeal of the mime to the populace is seen in the fact that as early, perhaps, as the beginning of the 2nd cent. the 'Christian' (ὁ Χριστιανὸς κομωδούμενος [Greg. Naz. *Orat.* ii. 84]) had become a regular character in the mime. The favourite act was parodying the rites of the Christian Church, especially baptism. The candidate was brought on the stage accompanied by bishops, priests, and deacons; and all the ceremonial was gone through with.¹ A number of early saints were *mimi* who in the course of time had been converted then and there by the Divine power of the rite they were parodying, had confessed their faith from the stage, and had suffered martyrdom soon after. The most famous was Genesius in Diocletian's time. His speciality had been to imitate the 'working of the spirit' with a pretended fit, after which he proceeded to baptism. A church was erected to him, and to this day Saint Genesius still remains a specialist on epilepsy.² Even martyrdom was depicted in the most realistic fashion. But this was nothing new. In the old mime of *Laureolus*, the robber chieftain was (apparently) nailed to the cross, and, as Josephus tells us (*Ant.* XIX. i. 13), the realism was heightened by a large supply of blood brought in for the occasion. In fact, Domitian once put the last touch to this delectable speciality by substituting the genuine crucifixion of a condemned criminal. That such an entertainment could still remain a burlesque is partly due to the fact, as Reich observes, that the sufferer was the clown. It is expressly stated that Saint Gelasios was the *μῦθος δέσποτος*, i.e. the *μωπὸς* or *stupidus*.

Occasionally the *mima* was converted. The famous case was that of Pelagia by Bishop Nonnos.³ As a rule, however, the *mima* was a

much harder nut to crack. The Christian Fathers were especially fond of designating her as a *πορνή* (Chrys. vii. 665 f. etc.).

It is only just to add that the *mimus* was not really to be blamed for his parodies. Throughout paganism he had ridiculed the ancient gods. This was characteristic of Hellenism, and no one thought anything of it. In their case, however, the Christians objected to it—a new point of view had come in from the East. And, when Christianity won the upper hand, the mime returned again to the old gods of paganism.

11. Christian opposition.—Attacks on the theatre begin with the first Christian writers (so Minucius Felix, Tatian, Arnobius, Augustine, Lactantius, Gregory Naz., etc.). Special works aimed at the theatre alone were written by Tertullian and Cyprian; and Chrysostom rarely forgets this his special vessel of wrath. In the course of time all this bitter polemic was systematized, supported, and connected by the dialectic of the law and of the Church.

All the old gods are devils (Tert. *Spect.* 19): Dionysus the old god is the lord of the theatre; therefore, the theatre belongs to a devil, *the devil*. He built it himself, and says expressly that it belongs to him (Tert. *op. cit.* 20). In the same way all dramatic arts come from the devil (pseud.-Cyp. *Spect.* 4; Tatian, *Orat. ad Græc.* 22). This is a favourite topic for Chrysostom: through the mouth of the monks Christ speaks, through the mouth of the *mimi* the devil speaks (vii. 675 B). The songs of the mime are Satan's own, the dances of the mime are not otherwise (vi. 77 B, viii. 422). Πορνὴ πάντα ἐστὶ, etc., the whole show and all that is said and done by and during the same is inspired of hell, a demon's litany, a devil's sacrament (viii. 6 C, ix. 323 B). All who go to the mime become the devil's own (viii. 114 O). Therefore the Christian who goes to it is a perjurer, for when he was baptized he swore to renounce the devil and all his works (viii. 6 O). Everything about the mime shows that it comes hot from hell. Dissembling, disguise, imitation, *μίμησης*, is the devil's stock-in-trade, his reason for existence, the origin of his name. The chief aim of the mime is to raise a laugh. But laughter and gaiety come not from God—θεὸς οὐ γαίγεται—but from the devil (x. 690, vii. 97).

Long and fiery passages are given up to the various actors, above all to the *mimæ*. They curl their hair, they paint their cheeks, they roll their eyes, they glitter in jewels and gold—and who are these *mimæ*? The daughters of butchers, of shoemakers, even of slaves! Most seductive of all is the beautiful voice with which they know how to sing their *ὧδαι πορνικαί*, their *ἄσματα σατανικά*, their 'ballads of the brothel,' their 'devil's own ditties.' Then, too, the language is common, vulgar, frivolous, full of oaths, not even intelligible, eking out its meaning with shouting and squealing! Yet the Christians are forever talking about the actresses, what they say, how they look, what they wear. Which one of these Christians can repeat the Psalms or passages from the Scriptures? Which one of them does not know all the songs from the mimes? The young people are singing them the entire day long. The mime is the theatre of concupiscence, an incurable plague, a poison, a snare of death (vii. 172), the training school of immorality, the seed of iniquity, the haunt of impurity and lewdness, the fiery furnace of the Babylonians heated to seventy times seven by the devil himself, etc. etc.

The above is a fierce arraignment, but of no great value except to indicate why Bishop Johannes was given the name of 'Chrysostomos.' As a matter of fact, the anathema of the Church was utterly powerless. Indeed, the Church actually lost ground, as there was evidently a large body of more or less conscientious Christians that saw no such harm in the mime as Chrysostom would have us suppose. Until the very end of the Eastern Empire interest in the mime never abated in the slightest degree, and it is well known that the metres, if not the music, of these same *ὧδαι πορνικαί* and *ἄσματα σατανικά* attacked by Chrysostom actually entered into the hymnology of the Greek Church. Arius was accused of the same thing by Athanasius. Every hymnology bears traces of a similar process, and, as a matter of fact, this is by no means the only indication that neither time, nor change, nor creed has ever been able finally to sever the ancient bond between the Church and the theatre.

general supervision of State officials. At no time apparently was the antique theatre a purely private enterprise; still less was it ever a purely financial one. One or two exceptions under the Empire are mentioned by Tacitus, but with such disapprobation that they illustrate rather than invalidate the rule.

Until the time of Augustus five of the six great annual *ludi* mentioned above were in charge of the various *ædiles*. The sixth, the *Apollinares*, which occurred in July, was managed by the *prætor urbanus*. The officer in charge had everything to do. Indeed, in earlier times, as we learn from Plautus, he even attended to the matter of costumes. He also built the theatre, and afterwards had to clear it away and put the place in order. Oddly enough, Rome never seems to have had but two permanent theatres—the theatre of Pompey, built in 55, and the theatre of Marcellus, which belongs to the Augustan Age. The *ædile* also had charge of the audience during the performance. In this he was assisted by his corps of *designatores*, or ushers. The *designator*, however, was a vastly more important person than is the modern usher. He was a regular deputy of the civil magistrate in charge, and as such the majesty of the law was with him. He had lictors, and was expected to move or remove people whenever necessary. In the 2nd cent., as we learn from the jurist Ulpian, this office was in the gift of the Emperor, and was of great value. The *ædile* had a regular sum allowed him from the State treasury to meet the bills incurred. But this *lucra*, as it was called, had been fixed as early as the Second Punic War, and was far from keeping pace with the growing expenses of the function for which it was designed. Nevertheless, the office of *ædile* as *maître de plaisir* made one so prominent and popular that it was much sought after by the aristocracy as a means to further advancement, and they spent fabulous sums in giving the shows devolving upon them. But at the accession of Augustus no patricians could be found who were willing to accept the office. He, therefore, transferred the management of theatrical matters to the *prætors*, and this remained the law under the Empire.

It is well known that one's seat at the theatre was determined by one's position in the State, and that it was regulated by law. The theatre was a religious institution, in charge of the Government. Such being the case, a seat at the theatre, like a right to vote or to bear arms, was a privilege of citizenship, and therefore to be assigned according to that principle. For that reason, in the earlier days of the Republic, slaves could not attend the theatre; and the same must have been true of strangers unless they were guests of the State. But in the time of Augustus these restrictions had ceased to be in force. The law on the subject of seating as it existed under the Empire rested for the most part upon enactments of Augustus, although these had been largely anticipated by generations of growth in Republican times. The orchestra, though the name reflecting its original use was and still is retained, was set apart for the senators. This rule had been in force since 194 B.C. Representatives of foreign States and, under the Empire, certain members of the reigning house were allowed to sit here. The position of the knights was finally established by the *Lex Roscia Theatralis*. This famous law was pushed through by L. Roscius Otho, tribune of the people in 67 B.C. Among other things it provided that the property qualification of a Roman knight should be raised to 400,000 sesterces, and that the first fourteen rows behind the orchestra should be set apart for the exclusive use of this order. The law

also provided that even within these rows careful distinctions should be made among the knights themselves. For example, the first two rows were reserved for those knights who had served as military tribunes or land-commissioners. The younger knights also had a separate section, which under the Empire was known as the *Cunei Germanici*. Even insolvent knights, *decoctores* were obliged to sit in a group by themselves.

Previous enactments were extended and strengthened by the *Lex Julia Theatralis* of Augustus. This law, which was much affected by Greek theatrical ordinances, prescribed the place of every one in all parts of the house. The general public sat according to *tribus*, or wards. But even here distinctions were made—for instance, in favour of husbands and fathers as against bachelors and spinsters. The women, and with them the young children, had to sit by themselves on the back rows. The one most notable exception was the Vestals, who had seats of honour near the front. So the various colleges of priests and other officials had seats of their own, often of a special form, with backs, arms, etc. Sometimes a certain seat was given a man *in perpetuum*, usually in return for distinguished services rendered to the State. Such a seat was also used by his family and could be inherited.

The usual time for a play to begin was early in the morning. A play of Plautus, including the music, would take about three hours. Whether two or more should be given in succession, as was sometimes the case, was left to the official in charge. Plays were never given at night except for ceremonial reasons. This was always the case when mimes were acted at the *Floralia*. Other details, so far as they bear upon the present discussion, have already been dealt with elsewhere.

9. *The Roman drama not truly national.*—In view of what has been said in the previous pages, we might perhaps conclude that as a literary production the life of the Roman drama was surprisingly brief, its great authors comparatively few, its genuine popularity problematical. We cannot agree, however, that the reasons for it were that the *Palliata* died of too much Greek, that the mimic sorrows of the tragedy could not appeal to an audience steeped in the bloody realities of the arena, that idealism does not and cannot reach a generation of realists. These are all true, but they are symptoms, not causes. There were plenty of men in the Golden Age of Pericles who preferred cock-fighting to comedy, and athletics to Æschylus. Nevertheless, the drama really did reach the hearts of the people. This was because it was theirs, because it was truly national. The Roman drama, on the contrary, both as an institution and as a department of literature, was profoundly affected by the intrusion upon it at an early date of the fully developed Hellenic tradition and the long-established Hellenic masterpieces. The consequence was that the Roman drama as we know it, and as the Romans themselves knew it during the historical period, was not really national, and had no deep roots in the national life. The atmosphere of the *Palliata* was foreign, the material of the tragedy was not only foreign but comparatively remote; even the worship of Dionysus—god of the drama—was an exotic, and the feeling of mistrust entertained by the genuine old Roman is clearly indicated by the famous *Senatusconsultum de Bacanalibus*. His affections, his traditions, his beliefs were deeply rooted in his own deities, the old rustic deities of the Italian countryside. Foreign gods, above all foreign gods with 'mysteries,' did not appeal to him. He was opposed to Dionysus, as long after-

wards he was opposed to the Christians, and it was the same feeling which prompted him to ignore for generations the intrusion of the Hellenistic week of seven days, each under the protection of a planetary deity. The actor, too, as we have seen, was a foreigner or its equivalent. In other words, the profession which in Greece was a consecration, involved in Rome the loss of civic rights. Who shall say how far the development of histrionic talent and the appreciation of it as such were affected by this absurd but entirely logical rule?

We have seen that two types of drama among the Romans remained popular for an indefinite period. The statements just made, however, are proved, rather than disproved, by these exceptions. The *Atellana* was a folk-drama, which in itself ensures longevity; it was also very old, and for the average Roman it was Roman from the first. The mime also was very old, but in its developed dramatic form it was neither Greek nor Roman, but really the child of the new era. It was Græco-Roman, and belonged to the Empire. The mime, too, as was said above, maintained itself for an indefinite period. In the long run, however, its vitality was due not to its superiority as an organic play, but to its enormous flexibility and to its power of adapting itself to the tastes of the passing hour. It always had a residuum of folk-elements, such as a few fixed characters and the habit of improvising dialogue; it could introduce popular songs and dances, also imitations and other music-hall 'turns.' In short, whatever it was capable of or had once been under Philistion and his compeers, it survived only as a theatrical performance, not as a high-class dramatic composition.

10. Parody of Christian rites.—Hatred of the Christians, for example, was long popular, and the consistent appeal of the mime to the populace is seen in the fact that as early, perhaps, as the beginning of the 2nd cent. the 'Christian' (ὁ Χριστιανὸς κομωδοῦμενος [Greg. Naz. *Orat.* ii. 84], had become a regular character in the mime. The favourite act was parodying the rites of the Christian Church, especially baptism. The candidate was brought on the stage accompanied by bishops, priests, and deacons; and all the ceremonial was gone through with.¹ A number of early saints were *mimi* who in the course of time had been converted then and there by the Divine power of the rite they were parodying, had confessed their faith from the stage, and had suffered martyrdom soon after. The most famous was Genesius in Diocletian's time. His speciality had been to imitate the 'working of the spirit' with a pretended fit, after which he proceeded to baptism. A church was erected to him, and to this day Saint Genesius still remains a specialist on epilepsy.² Even martyrdom was depicted in the most realistic fashion. But this was nothing new. In the old mime of *Laureolus*, the robber chieftain was (apparently) nailed to the cross, and, as Josephus tells us (*Ant.* XIX. i. 13), the realism was heightened by a large supply of blood brought in for the occasion. In fact, Domitian once put the last touch to this delectable speciality by substituting the genuine crucifixion of a condemned criminal. That such an entertainment could still remain a burlesque is partly due to the fact, as Reich observes, that the sufferer was the clown. It is expressly stated that Saint Gelasios was the *μῦθος δεινέρος*, i.e. the *μωπὸς* or *stupidus*.

Occasionally the *mima* was converted. The famous case was that of Pelagia by Bishop Nonnos.³ As a rule, however, the *mima* was a

much harder nut to crack. The Christian Fathers were especially fond of designating her as a *πορνή* (Chrys. vii. 665 f. etc.).

It is only just to add that the *mimus* was not really to be blamed for his parodies. Throughout paganism he had ridiculed the ancient gods. This was characteristic of Hellenism, and no one thought anything of it. In their case, however, the Christians objected to it—a new point of view had come in from the East. And, when Christianity won the upper hand, the mime returned again to the old gods of paganism.

11. Christian opposition.—Attacks on the theatre begin with the first Christian writers (so Minucius Felix, Tatian, Arnobius, Augustine, Lactantius, Gregory Naz., etc.). Special works aimed at the theatre alone were written by Tertullian and Cyprian; and Chrysostom rarely forgets this his special vessel of wrath. In the course of time all this bitter polemic was systematized, supported, and connected by the dialectic of the law and of the Church.

All the old gods are devils (Tert. *Spect.* 19): Dionysus the old god is the lord of the theatre; therefore, the theatre belongs to a devil, the devil. He built it himself, and says expressly that it belongs to him (Tert. *op. cit.* 26). In the same way all dramatic arts come from the devil (pseud.-Cyp. *Spect.* 4; Tatian, *Orat. ad Græc.* 22). This is a favourite topic for Chrysostom: through the mouth of the monks Christ speaks, through the mouth of the *mimi* the devil speaks (vii. 675 B). The songs of the mime are Satan's own, the dances of the mime are not otherwise (vi. 77 B, viii. 422). Πορνὴ πάντα ἐστὶ, etc., the whole show and all that is said and done by and during the same is inspired of hell, a demon's litany, a devil's sacrament (viii. 6 C, ix. 323 B). All who go to the mime become the devil's own (viii. 114 C). Therefore the Christian who goes to it is a perjurer, for when he was baptized he swore to renounce the devil and all his works (viii. 6 C). Everything about the mime shows that it comes hot from hell. Dissembling, disguise, imitation, *μίμωσις*, is the devil's stock-in-trade, his reason for existence, the origin of his name. The chief aim of the mime is to raise a laugh. But laughter and gaiety come not from God—θεὸς οὐ γαίγεται—but from the devil (x. 590, vii. 97).

Long and fiery passages are given up to the various actors, above all to the *mimæ*. They curl their hair, they paint their cheeks, they roll their eyes, they glitter in jewels and gold—and who are these *mimæ*? The daughters of butchers, of shoemakers, even of slaves! Most seductive of all is the beautiful voice with which they know how to sing their *ᾠδαὶ πορνικαί*, their *ᾠματα σατανικά*, their 'ballads of the brothel,' their 'devil's own ditties.' Then, too, the language is common, vulgar, frivolous, full of oaths, not even intelligible, eking out its meaning with shouting and squealing! Yet the Christians are forever talking about the actresses, what they say, how they look, what they wear. Which one of these Christians can repeat the Psalms or passages from the Scriptures? Which one of them does not know all the songs from the mimes? The young people are singing them the entire day long. The mime is the theatre of concupiscence, an incurable plague, a poison, a snare of death (vil. 172), the training school of immorality, the seed of iniquity, the haunt of impurity and lewdness, the fiery furnace of the Babylonians heated to seventy times seven by the devil himself, etc. etc.

The above is a fierce arraignment, but of no great value except to indicate why Bishop Johannes was given the name of 'Chrysostomos.' As a matter of fact, the anathema of the Church was utterly powerless. Indeed, the Church actually lost ground, as there was evidently a large body of more or less conscientious Christians that saw no such harm in the mime as Chrysostom would have us suppose. Until the very end of the Eastern Empire interest in the mime never abated in the slightest degree, and it is well known that the metres, if not the music, of these same *ᾠδαὶ πορνικαί* and *ᾠματα σατανικά* attacked by Chrysostom actually entered into the hymnology of the Greek Church. Arius was accused of the same thing by Athanasius. Every hymnology bears traces of a similar process, and, as a matter of fact, this is by no means the only indication that neither time, nor change, nor creed has ever been able finally to sever the ancient bond between the Church and the theatre.
